```

Brought my TS430 to Kenwood for repairs....looking at getting a new
radio & using the 430 as my spare...

Which radio do u recommend?

Kenwood 570? 2000?

Icom 756, 775? 756PRO??

Any others?

Which have the built in keyer, tuner, DSP? I like the activity display
on the Icom...

If ur selling one, plz let me know, too...I'm in Los Angeles

```

You are forgetting one obvious choice...The Yaesu FT1000 MP (or MP mark V)...Has built in keyer, tuner, EDSP, power supply (orig MP) and scads more...I've used them all in the last 25 years and the 1000MP is by far my favourite...No activity display though, if that's what you're looking for...Also depends on the type of hamming you do...I like contesting and chasing DX...1000MP is the favourite amongst this group...Other rigs may better suit your interests...That's my 2 cents worth...

Well, in order for a ham radio to communicate with a FRS radio, you'd have to get the radio to transceive on the correct frequency, not just sync the PLs.

All a PL does is not allow the squelch to open when a signal is received unless the PL is present.

A PL is a sub-audible tone. Many amateur radio repeaters use PL decoders to stop local noise from keying the repeater. The most common in my area is a PL of 131.8. This means that a 131.8Hz tone is sent as well as any audio picked up by the mic.

But, even if you were able to mod a HT to transceive on the FRS frequencies, it would still not be legal since the HT is not licensed by the FCC for FRS frequencies.

There is one exception, which I've only heard of and never seen. I heard a rumor that there was a dual band 2m/70cm HT which is also licensed for FRS. This means that the radio is limited to 500mW on FRS frequencies and you'd probably have to use the factory antenna, if the antenna is replacable at all!

You are kidding, right? If not, no, you cannot use a modified 440
radio to talk on the FRS freqs. If you do, however, PLEASE give you
callsign.

Look at my sig file, Danny . . .see which rig is listed first?

The best rig I've used in nearly 56 years as a licensed ham is the 756PRO.
You can't go wrong with it . . .

Yes, you need to give your callsign -- and you need to be sure to tell Mr. Riley Hollingsworth, K4ZDH, about it so he can speed up the processing of your license revocation for illegal out of band operation, transmitting with illegal equipment, and gross stupidity.

Using a ham radio "with FRS ability" is also illegal.

Did ANYONE in this newsgroup ever see a copy of Part 97 ?

Apparently your knowledge of Part 95 is equal to your knowledge of Part 97.

Communication between GMRS and FRS is permitted I believe since the FRS =
channels 1 to 7 are shared with GMRS. GMRS users must have a license, =
and can run more than a 1/5 watt of power too. So if somebody is =
monitoring, and a person was ID'ing using their GMRS license, it could =
be mistaken for a Ham callsign unless they know the difference in =
callsign formats between the two services.=20

That's correct.
Here in Holland (PA) there's a band called PMR and runs from
433Mhz till 434Mhz and maximum power is 100Mw.
It's here in PA also legal to talk with these people on the PMR band
being an HAM.

Hope U got something on this answer.

Sorry must LPD instead of PMR.
PMR runs from 446MHz up to 466.5Mhz and allows 0.5W to use.

I teach part time in the electrical engineering department at the University of New Mexico. Specifically, I teach an "Introduction to Communication" class (AM, FM, Pulse Modulation, SNR, Data Communication, etc.) to seniors and typically first year graduate students. As a recently licensed amateur (although I have had a longtime interest in the technology aspects of the hobby) I note that ham radio dovetails very nicely with the classes I teach. In fact, so much so that I am contemplating offering a class tentatively entitled "Introduction to Radio Communication" that would be somewhat oriented towards the license exams. Has anybody out there heard of any sort of similar offering at any other university (I would be interested in comparing syllibus's)? The ARRL web site information on education activities seems to be oriented to high schools, boy scouts, and the like. I am after something perhaps somewhat more technical oriented to electrical engineering students....

Thanks in advance....

Armin

Wonderful idea. No telling where it could lead.

You might use the ARRL outline for continuity and completeness and just beef it up.

One thing I've observed that has transformed the teaching of engineering is the emphasis on teamwork and creativity. In addition to helping them with the exams you could create teams and assign competitive projects. Not as elaborate as a solar-powered racer but more than building a bridge out of raw spaghetti.

Maybe they could design and build a station using the minimum number of components, or a transmitter or antenna with the highest efficiency, etc.

Of course, one of the team projects could be to see which group gets 100% licensed first. This is called "cooperative learning" and (as you probably know) is the subject of some admiring articles in the psychology world.

```

Thank you for reading this posting, any help would be appreciated with the following problem that I have.Here is one to get your mind teased:::

Icom 756PRO or FT-1000MP or FT-101ZD as an input all give 100W
Feeding a Henry 2KL-4 Linear, running a pair of 3-500's
Upon initial key up in to a dummy load starts off 700W and drops to 200W in about 8 seconds.
Here's what I have tried
I have tried a total of 5 Transceivers
Tried a copal of dummy loads
Checked all of my leads
changed the tubes for Brand new ones
checked the reset button on the linear
I do notice when keying with 0W rf that the grid meter goes down to below the zero mark but I suspect that is just meter alignment and it only just goes down a slight amount.
you can see the meters creep down after about 8 seconds from 80 Grid 480 plate to 45 Grid and 380 plate
I have had the power company come out to check the voltage and current draw and everything there is 100%
Any ideas as this is blowing my mind
I appreciate any constructive input that any of you may have.
Thanks and Best 73's
Martyn

The Thames Valley Repeater Group has a new website at www.tvrg.org.uk

The group operates four repeaters in the Thames Valley area, GB3AW, GB3BK, GB3BN and GB3BN.

GB3BN the Bracknell UHF repeater is in the process of moving to a new location which is expected to be complete around Christmas time. Please visit the webpage for all the latest news on the move.

All comments on the website style and content are most welcome.

The Thames Valley Repeater Group has a new website at www.tvrg.org.uk

The group operates four repeaters in the Thames Valley area, GB3AW, GB3BK, GB3BN and GB3BN.

GB3BN the Bracknell UHF repeater is in the process of moving to a new location which is expected to be complete around Christmas time. Please visit the webpage for all the latest news on the move.

All comments on the website style and content are most welcome.

```
Xref: supernews.google.com rec.radio.amateur.homebrew:2722 alt.ham-radio.hf:102
```

I recently purchased an HP 8557A spectrum analyzer, and have been using it as a band scope for the ham station. I connected the input of the analyzer to the IF output of my FT1000, tuned the analyzer to the 74.62MHz IF frequency, and it really works well.

Problem is, the analyzer drifts like crazy, and I find that I have to tweak the frequency control on the analyzer all the time to keep the display centered where it should be. This makes it a bit difficult to read the display to determine the frequency of those quiet spots on the band.

First question, has anyone have experience with the 8557A? Is a lot of drift in the frequency tuning normal, or do I have a defective unit? It gets more stable after an hour or so of warmup, but the drift after that is still significant, maybe 10-15KHz/minute or more. It doesn't take long before the center frequency is clear off the scope at 5KHz/division.

Second question, if the drift is fairly normal, has anyone looked into some method of stabilizing the local oscillator in the analyzer? According to the maual, the first LO in the analyzer tunes from 521.4 to 871.4 MHz, which translates to the 0-350MHZ range of the unit. Might there be a way to build an outboard synthesized oscillator to replace the analyzer's LO?

My other option that I have been thinking about is to purchase a RF Generator that is synthesized and put a pushbutton switch that switches from the RF generator to the input from the radio. I could then quickly see the deviation and tune the analyzer back to the correct center frequency. This all sounds kuldgey though.

If anyone has any ideas, I would appreciate them. Please email me at rbrocaw@flash.net. Many thanks for reading this post.

73,
Dick

Due to a recent berievment in the family, I have a load of radio (and
miscellaneous
electronic) gear to sell.
We live in Maidstone, Kent and any equipment can be viewed/tried before
purchase.
A 10% contribution will be made to charity for each purchase.

I am compiling an online catalogue at the moment, which can be viewed at
http://www.bstard.com/dadradio

Regards,

Paul Waldren.

Hello,
does anyone has experiences with the All Band vertical antenna MFJ-1798 (10
bands, 80 Meter thru 2 Meter, vertical antenna)
Is it worth the price? (about $300 or NFL. 995,=).

I don't want to be disappointed about de SWR.

Thanks for answering me,
pa8wim@amsat.org

73,
Wim

Any reports on the 6-band vertical MFJ-1796?
Its 12' and supposidly could be used portable.

Hello,
I just bought a Alinco DR-592 dual band mobile. Does this thing receive 800 mhz and on the VHF side AM aircraft. I know it reads out both and was just wondering? Know any tips tricks or mods for this radio? please reply by email to: pacman@bcl.net

The 590 had the code to talk to an 800MHz module, which was a paddle board that was, as far as I know, NEVER provided as an option. I don't know if that paddle board also had the AM aircraft on it. There was a THIRD antenna connector on the back panel as well for 800mhz. Never used. I think the AM aircraft used the 2M antenna connector.

At one point, the AM aircraft was incorporated into the 59x product line, but I don't think the way it was implemented was 'compatible' with the way the 590 units did it, or expected it to be done.

As to the 592, I suppose the only way to find out is to open it up!

Mike

Okay here is my problem. Just purchased the Radio Shack through the glass antenna. The "Glue" did'nt hold. What can I do now?! The only part of the antenna connection that is solid is the outside, no problem with that "glue" its on the glass with no problem, however the inside of the truck I can't get it to stick! What can I use that will keep it together, please help!
Reply directly since I most likely wont be checking until next weekend.
Email ngwd@flash.net

73 Daniel KC4OXP
Winder, Georgia

P.S. On another topic, I do have a Larson Mag Mount, a 2000 Toyota PreRunner, does anyone know (without drilling a hole) how I can get the coax into the truck without drilling? Thanks!

I suspect that the surface of the glass MIGHT be a little curved? The one lucky part for you is that Radio-Shack WILL take it back, just tell them it didn't fit your needs :) Eddie

Be sure to clean the glass with alcohol before trying to glue to it. Inside windows build up a "film" that can keep the glue from sticking properly. If you're a smoker, I'd say this is particularly important.

Dual Band Amateur Ham Radio Handheld
EBAY AUCTION Item #1216996273

For Sale : MAHA-REXON RL-501 with 200 channel memory, Dual Band ht 2mt/440mhz with MAHA's NMH High-output battery pack. Last for aprox. 14hr of listening to the local repeater. I have the original box, packing and owners manual along with the ac charger and a custom leather case, and a speaker mic that I will include in this auction. Has seen little use, mostly during field day. I am selling to upgrade to the new APRS handheld, as I enjoy that aspect of the hobby more theses days. The unit is used but clean, small marks on the original antenna where the speaker mic was clipped for storage, but unharmed in anyway. I would rate this unit a 8 out of 10 on the looks scale, and a 10 for opperation. As with any used gear I will not accept any returns or refunds, and this unit is sold without any warranty, but I will state that this unit is fully functional on my desk as I place this auction listing.. I AM A PAYPAL VERIFIED Seller, I would like the winning accepted bidder to use PayPal with Visa or MasterCard etc.. much Quicker and it protects you against fraud, but will accept money order / certified bank

```
drafts, No personal Checks. Buyer to pay Fixed S/h of $10.00. US Bidders
Only. I reserve the right to offer to sell to the next highest bidder if the
winner has unexceptable bad feedback Rating.

Dual Band Amateur Ham Radio Handheld
EBAY AUCTION Item #1216996273

For Sale : MAHA-REXON RL-501 with 200 channel memory, Dual Band ht 2mt/440mhz with MAHA's NMH High-output battery pack. Last for aprox. 14hr of listening to the local repeater. I have the original box, packing and owners manual along with the ac charger and a custom leather case, and a speaker mic that I will include in this auction. Has seen little use, mostly during field day. I am selling to upgrade to the new APRS handheld, as I enjoy that aspect of the hobby more theses days. The unit is used but clean, small marks on the original antenna where the speaker mic was clipped for storage, but unharmed in anyway. I would rate this unit a 8 out of 10 on the looks scale, and a 10 for opperation. As with any used gear I will not accept any returns or refunds, and this unit is sold without any warranty, but I will

```
 state that this unit is fully functional on my desk as I place this auction
 listing.. I AM A PAYPAL VERIFIED Seller, I would like the winning accepted
 bidder to use PayPal with Visa or MasterCard etc.. much Quicker and it
 protects you against fraud, but will accept money order / certified bank
drafts, No personal Checks. Buyer to pay Fixed S/h of $10.00. US Bidders
Only. I reserve the right to offer to sell to the next highest bidder if the
winner has unexceptable bad feedback Rating.
 ---------------------------------------------------------------------------
-
 ----
 On Feb-22-01 at 20:06:53 PST, seller added the following information:

 I accept PayPal, the #1 payment service in online auctions!

 On Feb-27-01 at 18:35:50 PST, seller added the following information:
Here is a link to the specs as per some peoples request for more specs on
this unit : http://www.maha-comm.com/rexon/rl501/index.htm Just cut and
paste in to the address line and all will be provided the information you
request. By the way the 800mhz mod/out of band mod has completed.

Well, the recent earthquake here in the Great Northwest have prompted me
to upgrade my communication capabilities. So, I'm upgrading to General
and looking at HF gear!

I want the general Net Wisdom on the most durable (under transport and
field conditions) and reliable HF gear - current or not. I want 2 radios
- a back-packable unit, and one to be used for base operations. What do
you recommend and why? (URL's would eb a big help!)

Thanks!

Grant, KD7JNW (and hoping to upgrade soon...)

RECOMMEND a IC-751 if you can get your hands on it for HF (sure its old)
and a AZDEN Pcs-3000 (also old)

Both were installed in a Chevy blazer in 1988 on cold weather ops at FT
DRUM
NY and i rolled the blazer down an embankment
broke all the antlers went back to base replaced antennas
fired up the 2 meter and talked some 30 miles to watertown NY
and fired up HF and got Puerto Rico fist call on 20 meters

no brag just fact
don

Aren't they sorta large for backpacking, tho?...
Radio-Shack's selling a really small Alinco HF rig now, btw... I've no idea
how suitable it'd be for backpacking, but it's one of the smaller ones I've
seen in person, atleast... You should be able to find it at
www.radioshack.com, and I'm pretty sure it was under $700 new...

For a back-packable unit, I don't think you can beat an Elecraft K2,
160-10mtrs with 10 watts out on SSB or CW  They have a optional built in gel
cell battery that will run for many hours.  If you need more output, there
are 50 and 100 watt amps that can be built on as well as a internal ATU.
(The amp requires an external battery) These are available as kits only, but
there are some professional builders who will put it together for you if
your eyes and hands are old. I believe the URL is
    http://www.elecraft.com

Don't count out the Icom 706. You can get a new 706 Mk2G at Texas Towers for $904. Not an advertisement, just a report of my own experience.
www.texastowers.com

The Elecraft K2 is nice, but I doubt that you want to build your own but I could be wrong. Nothing wrong with the 751 or Azden either, but the 706 will give you all mode hf, 6, 2 & 70 cm in a nice, small box. the Yaesu 817 has the same coverage as the 706 but only 5 watts output. The 706 is 100 on hf & 6, 50 on 2, 35 on 440. The Yaesu FT-100D will get you the same coverage & power as the 706 but I didn't buy one because the 100 has had some very serious problems.

I also have an Icom 746. Hf, 6 & 2 at 100 watts on all bands. It's a bigger rig than the 706 but I've carted mine around with no fuss.

Get the 706 and a manual antenna tuner and for well under a grand you'll have it all... with a full warranty. The 746, which has an internal automatic antenna tuner for hf & 6, will set you back around $1400 give or take.

Hard to beat the Icoms. www.icomamerica.com

73 & good luck.

Don

Thanks, Don. The only problem with the 706 in a portable application is
environmental - it's not designed for use in an open environment, as say
the Yaesu 817 or SGC-2020 are. I plan to get one - I need a new radio in
my truck! - but as a portable backpaking/camping/SAR/disaster radio, I
don't think it will cut it.

I like the SGC-2020, but it doesn't have all the features of the Yaesu
817. The problem with the Yaesu is that it doesn't have the power I'd
like - I want to experiment with field deployed NVIS, and 5 watts won't

do the job. 10w will just do it, and 20w would really be ideal.
Decisions, decisions...

Does anyone know of a portable, battery powered HF amplifier with around 20w or 25w output? That would be the perfect complement to the 817. I've done several net searches, and have yet to turn one up.

> I also have an Icom 746. Hf, 6 & 2 at 100 watts on all bands. It's a
> bigger rig than the 706 but I've carted mine around with no fuss.

Since no one really mentioned much in the "full size" part of my query, I did some looking and also found the 746. It seems to be pretty rugged - 100% duty cycle, for instance - and has all the bells and whistles I'd ever need. It will probably be my "do everything" radio.

Thanks again!

I am at my wits end with this problem....please help.

I have a 1988 Toyota Camry that causes interference to my 2 meter radio and scanners. I'm not sure what is causing it because the scanner gets a whining noise even when it operates on its own power and using the rubber duckie. This tells me that it's RFI. The 2 meter radio gets it even worse since its hooked to the cars electrical system. It gets alternator whine and some other kind of RFI interference. I thought it was my older Kenwood mobile but I just upgraded to a newer mobile and still get the interference....maybe even worse. Its so bad that unless I have a S-7 or better signal on you, I can't hear you. It actually cuts the signal out as if someone were keying over them. I hate talking on repeaters so I don't have the luxury of full scale signals. We try to stay on simplex unless its a must to go to the repeater.

I have read several web pages and first things to try is this:
New (better) Plug wires.
Plugs!
Check the Distributor for cracks or abnormal wear.
****

I have already ran power wires straight to the battery.
Tried Ferrite coils on the Power leads and antenna coax.
I read that Toyotas are bad about having a noisy fuel pump?!?! Any experiences?
I know there has to be others with the answer to this problem......please help if you know the answer.

Dan I also have a 88 Toy, I had the same thing here, I went to Radio shack and bought the largest noise filter that they had amp wise. (Choke type) and put it in the power lead at the radio. Fixed 90% + ! I have now put in a new radio, the kenwood 700 and it works fine with that too. (There is still some kind of noise that I don't hear or see on the meter that blocks out some if not most of aprs when the car is running. If I am where there is STRONG aprs it works OK.)

Has anyone tried building their own amp? I've seen several homebuilt stuff
from years ago...but not many people today want to go through the trouble.
If I could get a schematic I'd try to build myself one...just a thought.

Michael, N1XRR

I'm using the SGC2020 HF radio, which puts out about 20/25 watts to begin
with.  It works great, and the price is right.

I've never done it, but I suppose with the right plans I might be
convinced to give it a shot!

Hi there

I have a Kenwood TK759 VHF mobile radio. The programming software makes mention of a P.A. facility. This is supported by a 3.5mm jack socket on the back of the radio.

I have assigned a key to activate this function, however there is no clear mention of how to adjust the P.A. volume. I can hear that the function is active in that there is a click on the speaker when the PTT is pushed and a minute amount of audio can be heard.

Does anyone in the group know how to adjust this volume as neither the operators manual nor the software indicates this?

All help gratefully received!

Thanks in advance.

Regards.

I am not familiar with the radio you mention, but I suspect the output is "low level" (similar to what an RCA type jack would carry). This low level audio more than likely needs to be amplified externally, similar to high end car audio. Try borrowing an amplifier to prove this theory.

Hope that helps,

Silent boB

Hello all!!!

With the majority of United States amateur radio operators being of the age 35 and up, and a large percentage of that majority being over 50 or 60 years old, we as "hams" need to work on promoting our hobby.

I am looking for tips, suggestions or ideas in regards to promoting amateur radio to youth. I have a program I am working on over the next nine months to promote to the area elementary, middle and high schools and colleges, and I want to make sure that I cover all bases.

Any and all help that you might have to offer would be greatly appreciated. Please email me at kc8pmx@tm.net with your suggestions.

Thanks!

Ryan KC8PMX

Hi Ryan

One thing I might suggest is too work with the scouts/cubs and the cadet groups in your town. My first experience with Ham Radio was with the Cub Scouts and I never forgot it. Our ham club sets up a field day type site at the Scout jamborees and let the little ones work stations all over North America. We have to send the kids away so that everyone could get a turn. We always get asked back and it is a good fun week end of camping. Many cadet groups can get funding from the government to set up a station at the hall to give practical training under supervision. I hope that I may have helped in some way.

well I'm 30 and my 8 year old is facinated by the code....(she may be the only one to EVER use CW when I can finally get a rig). But at 1-3 grade they are learning the alfabet and how to spell, if they learn the code then it is much better and easier for them.

besides what kid dosen't want a note to be readable be the teacher :)

You can always find one or two really interested kids to dig into ham ,
perhaps a couple to look over what is going on and give it a limp try but
the masses are to involved with other things to be sucked in.
Now if you could combine.. say skateboarding with HAM you might get
someplace..

Steve

Is there a minimum age for the license?
My boy is only 6, but he is way interested already.
I know it will be a couple of years before he gets the hang of it but when
can they takje their test?
i heard it was 14?

There is no minimum age in the US for a ham license. All he needs is
the ability to pass the test.

I'm 20, and have been a ham since I was 16.. in fact, HA, 4 years 2 days ago (4-18)... I just realized that :)

All the suggestions are great... Jamborees, etc for Scouts.. working the local elementary-high schools, etc. Setting up chats with people in orbit (e.g. former MIR) or an appointment with a couple of people in foreign countries, other states, and the like will always get a crowd in a school parking lot or field. And, ultimately the ones who study and go for the tests are the ones who are more likely to stick with it than those who dont (I love licensing)... Maybe line something up like that (some exposure in schools) a week before Field Day or some other big contest and invite them out, hand out flyers, and tell them "You liked this? <Insert Event Here> is gonna be bigger & badder"...

A presentation to any HS applied physics classes, or electronics (AC/DC, Physics of Technology type classes) might also help. Having those presentations the day of, or day before your parking lot presentation of chatting it up with far away folks, which is of course 1 week before Field Day would be cool. :-) Show them or tell them about the different modes in the parking lot - ATV, repeaters, internet gateways (if you have one locally, all the better), satellite, etc... Newer digital modes too. Of course, students dont often have a lot of spending money (unless mom & dad spoil them ;-)), so especially in the classes, but the parking lot too, show the kit radios in an Altoid box, easier antenna projects, or something creative and cheap. Demonstrate that ham radio kicks CB tail 10 meters from Tuesday (hehe).

Now that you have set up a parking lot (or someplace on campus, thats just an example), a classroom visit for electronics classes, an event a week later you could also have planned the beginning of a no-code theory class or 2 on different days of the week (to catch as many students & adults as possible) open to the public. Be sure that you get in the good with teachers/faculty too - licensed faculty can only help! After other PR measures aimed at adults, the 2 classes may do very well. Code classes could come some time after that.

After you've got a good group licensed, one thing I ***KNOW*** from experience is to foster involvement with students more than you would adults (well, some adults fall away just as easy). A campus or district club for students/faculty would be snazzy. Any hams you already have in the schools can be instrumental in this. Your local club probably already has antenna classes, get togathers for making kits, but whatever students you have or get - pester them the most to get involved in these things!

```
I don't know what you are already doing, but I'm just spewing forth with
ideas and such that might give you some ideas to be creative with... I just
like to ramble!  Who knows, you might be doing all of the above already, in
which case, just ignore me  :)

73!

I need programming information on the Icom IC-2SAT HT. Just picked this unit up but wasn't supplied with the manual unfortunately. (probably one of the reasons why it was so cheap.)

Anyone have either a scanned copy of the manual or have it in .pdf format?

Thanks in advance,

Ryan KC8PMX

I'm looking to the future, and want to buy a general-purpose HF+whatever transceiver. I've narrowed the choice to the FT-847 and the IC-746. Now, tell me: which would you buy and why? I'm particularly interested in things like durability, ruggedness, reliability, and that hard-to-define "usability."

So, guys, sell me on one or the other!

I just purchased the two radio's listed and wondered if there were any mod's, information or other information other than what's in the owners manual that you might be able to share.

Hi,
I am looking for circuits to build a S.W.R and Watt meters for 2m. (144 - 146MHz) If anyone can help, please e-mail direct to:-
Tienie.Venter@Eskom.Co.ZA
Thanks,
Tienie ZR6JMV.

Just saw your posting. Don't know how many times I have mailed out my 2SAT instructions but they always find their way home. Do you still need a copy or did you find one elsewhere. I will be glad for you to copy mine. K4AVO

Your best bet is to pick up an ARRL Handbook and have a look at the
projects inside. If you want a cheaper prebuilt unit, consider buying a
used Heathkit VHF watt meter off Ebay.

cheers

When I was shopping for my first (and last I hope) HF rig I did the usual feature comparing and determinded the Yeasu (don't remember which model) didn't have the features at the same price as the 746. Stuff like the internal antenna tuner and 6M and 2M. I bought the 746 and have not been disappointed. I get good on-air reports and I hear alot of others on the air. I'm sold. It's farily compact and pretty easy to use and it still has features I haven't even looked at yet.

You know that you are helping the site by running your mouth
about it.  Its like the press, the more folks hear about it the more
they want to know more.  Let it be!  People will seek their own
level of what is right.  Just my thoughts.

            John

Seems like it hits the mark. Nice to see a truthful web site
rather than all the politically correct lies and bullcrap of
the past few years.

HiGrant: I chose the Icom 746 about a year and a half ago and am very
satisfied with it. It has worked very well and I get great reports using it.
I didn't want to buy any optional filters because I have an outboard W9GR DSP III
that I was using with my TS-50. I run the W9GR filter in the audio line to the
speaker and that lets me narrow the band width of received signals, both CW and
SSB as well kick in extra DSP noise filtering if necessary. There are a couple
of types of pulse noise that the 746 DSP will not take completely out but using
the W9GR
filter in DSP mode along with the 746 DSP the noise dissapears. I highly
recommend
the IC 746.

Grant,

I have always been a Yaesu kind of guy, have had a 990 and 920. Finally got a 706 Mark II G and loved the receiver so much I decided to get a 746. To date it has been the finest radio I have ever owned.

The earth station is a fine rig too but is lacking in many areas. It has no built in tuner but if you want to do satellite work all the time it is a good rig. Friends tell me that the circuit board is small and not well constructed... many problems having to fix solder joints all the time. Not a robust rig.

For my dollar the 746 is the way to go.

Hi All

I recently obtained my amateur license and am about to take the 12 wpm morse test. I have obtained a Kenwood TS-430S HF rig and want to install one of the optional CW filters to reduce noise and interferance. There are two different filters available: the YK-88C 500 Hz filter and the YK-88CN 270 Hz filter. I would appreciate any comments which could help me to decide which of these I should buy.

For those who do not know the TS-430S, it has a wide/narrow filter selector. In CW mode, the "wide" seeting will always select the 2400 Hz SSB filter, while the "narrow" mode will select the optional CW filter, either 500 or 270 Hz. This means one can tune up in "wide" mode and then select "narrow" once on frequency.

Also NB that I live in South Africa, where the bands are probably not as crowded as in Europe or the USA.

I would appreciate any comments, particularly those from hams who use a TS-430S for CW.

Best Regards
Andrew ZR1IR

I use the wide setting most often. The 500hz filter is nice to have when the going gets rough. I have tried a 270hz filter, but it was so sharp that the radio sounded cold and sterile.
I just didn't like it

As you gain experience, you will be able to pick out the signal you are listening for.

news:3B305C3B.FFC30F6D@exinet.co.za...

: Hi All
:
: I recently obtained my amateur license and am about to take the 12
wpm
: morse test. I have obtained a Kenwood TS-430S HF rig and want to
install
: one of the optional CW filters to reduce noise and interferance.
There
: are two different filters available: the YK-88C 500 Hz filter and
the
: YK-88CN 270 Hz filter. I would appreciate any comments which could
help
: me to decide which of these I should buy.
:
: For those who do not know the TS-430S, it has a wide/narrow filter
: selector. In CW mode, the "wide" seeting will always select the
2400 Hz
: SSB filter, while the "narrow" mode will select the optional CW
filter,
: either 500 or 270 Hz. This means one can tune up in "wide" mode and
then
: select "narrow" once on frequency.
:
: Also NB that I live in South Africa, where the bands are probably
not as
: crowded as in Europe or the USA.
:
: I would appreciate any comments, particularly those from hams who
use a
: TS-430S for CW.
:
: Best regards and thanks for the help
: Andrew ZR1IR

Anyone experience audio feedback on the Radio Shack 2M mobiles? I have 3 of them installed in different vehicles and all experience audio feedback at high volume, usually after the radio warms up from transmitting.

Looking for ideas on how to solve the problem.

Hello Dave,
My wife and I use a pair of HTX-212's (one base and one mobile) for the past 6+ years with no feedback trouble at all.   I am sorry that info doesn't really help you much......the mobile one is has it's power lines run directly to the battery.   We took no special precautions for grounding per say. It is fed to a Comet B-10M on a Larsen mag mount.

The HTX-212 run as a base has a heavy ground cable tied to a heavy copper bus bar across the back of the operating desk which all gear is tied to. it is in common with the AC service ground as well as a nearby outside ground rod. The equipment I used for the grounding is from J Martin Grounding Systems (in QST)

That is how we are operating here with no trouble......have you examined your grounding situation and power hookups?   I hope maybe something here has nudged you towards a resolution....good luck....

I use a 430 with the NARROW 270 cycle filter and love it. You dial in your signal, then click on the narrow filter and fine tune it to bring it into focus. Unless someone is right on top of your guy, you can't hear anyone else.

The only way I would think that you would get feed back is if there is another radio on the same frequency nearby. The speaker should not produce any sound while transmitting so you should not get feedback. Let me know how you fix this. I'm curious of how this is happening.

I have the same problem with mine. I thought it was feed back from the
mike, but even with the mike unplugged I still have it. I tried it in the
house on a PS and it still happens, I even tried different antennas without
any success. It works fine at half volume or less, I don't get any
feedback. It also works fine with an external speaker. I assume it has
something to do with poor speaker shielding??? If you find out anything
please let me know as well. Thanks.

Sounds like microphonics. The vibration (audio) from the speaker is getting into the FM modulator (or microphone audio stages.)

Magnetic radiation from the speaker is just a bit too esoteric to be suspect at this point.

Moving to an external speaker pretty well isolates it. It's not a ground loop type problem with the speaker audio or it would continue with even with an external speaker. I'd take an eye loupe and start looking for a cracked adhesive bond somewhere in the microphone audio or modulator path.

Jeff
WA6FWI

Billy and Tracy wrote:

> I have the same problem with mine. I thought it was feed back from the mike, but even with the mike unplugged I still have it. I tried it in the house on a PS and it still happens, I even tried different antennas without any success. It works fine at half volume or less, I don't get any feedback. It also works fine with an external speaker. I assume it has something to do with poor speaker shielding??? If you find out anything please let me know as well.

I have the same problem with my HTX-242 too. When I turn the radio up almost all the way to be able to hear a local repeater that has exceptionally low audio output I get this annoying whine, which sounds like low level feedback (the making's of I mean).

Aside from this problem, I have alot of good luck with the radio, but I do notice that it is voltage sensitive. Alot of the time on HIGH power mode, I must have the engine running, even though the battery in my truck is brand new. (power cables ran direct to battery)

Ryan, KC8PMX

OK, I've been to both websites and can't find an answer. Can either the IC-706 Mk IIG or the FT-100D do cross band repeat, or be modified to do so?

Thanks for any help you can give!

Hello everybody and thanks for reading this.

I'm a brand new beginner... never before played with CB or HAM radio and don't know anything about it, but I'm intrigued. I want to get something that will allow me to talk to people... so... I have a couple of questions.

1) What exactly is the difference between CB radio, HAM radio, SW radio, and even walkie-talkies. Is it just the range?

2) How does it work if you have a CB radio. Do you just scan across the channels and listen to see if anybody's out there? And if you hear people, just start talking and they will hear you?

3) Say I have a hand-held 40 channel thing and my girlfriend has one as

well. Does it matter if they're the same make or model or anything? or do we just agree to communicate on the same channel (ex. #18). Also, do we just leave them on all the time, or would there be a "call" button.

4) For those radios which require licences, such as Short Wave... how do you get one? What is the cost, what is the procedure?

5) What is the average range of a hand-held two-way radio (walkie talkie) or hand held CB radio?

I know these are probably really silly questions, but ANY advice would be wonderful! Thanks in advance!

Nick

Don't want to take the time to explain the details at the moment. Suffice it to say, go with ham radio if you want to communicate with lots of people over a distance, or even if you want reliable communications down the block, to the next city, or next state. I'd suggest start with a RAdio Shack and see if they can point you to a local ham club. Look in the phone book yellow pages for Amateur Radio dealers. Look on the internet for local activity.

Short wave listening can be fun too, but it's a receive only thing, so if you want to communicate too, go with ham radio.

CB radio is noisy, crowded, less range, and somewhat less polite than ham radio, although it is cheaper.

If all you want to do is talk to your girlfriend a 1/4 mile away, or something like that, buy a pair of "Family Radio" Handy Talkies.

I'd like to settle on one family of logic IC's, if possible, for my "parts department" for homebrew projects.

The 4000-series CMOS IC's are great for battery power because they tolerate a wide supply voltage, but they're slow and have a limited range of types and functions. The 74HCT-family is about 4X faster with a much wider range of functions available. But it's 5V only which limits its use with batteries.

I often make battery powered CMOS projects with no power-switch because the Idd of many CMOS IC's in static mode is so low that I can just give it a new 9V alkaline once a year. But the lowest quiescent-current 5V regulator I've seen is 15uA (Philips TDA3664) which will kill a typical 9V alkaline in a few months.

What do other serious electronics and ham-homebrew hobbyists stock for IC logic families in their "parts departments"?

Thanks in advance!

> interface with bipolar TTL.

True, but my point is that I can't just hook it up to a
9V battery.   So I'm trying to trade off the need for
a voltage regulator, which will likely suck up far more
current than the entire rest of the circuit, versus using
CD4000-series IC's which happily tolerate a wide supply voltage
but are slow and come in a more limited range of functions.

What I'm asking is what other serious hobbyists, homebrew
designers, inventors, and others into do-it-yourself electronic
wizardry prefer to stock their supply cabinets with, and why.

Sometimes I post questions to the sci.electronics.components,
sci.electronics,rec.ham-radio,alt.electronics, and rec.electronics
newsgroups. But I've noticed that there is very little traffic
on those newsgroups - a few postings a day - so it's hard
to get a critical mass of ideas and discussions.

Are there any really ACTIVE discussion groups on the
Internet - either newgroups or web-based for people
designing and building electronic circuits and devices?

Thanks in advance!!

Why use a 9v battery? - they are just about the most expensive sources of energy you can get (albeit convenient).

Use two to four AA cells in a holder (two AAs are about the same size as a 9V). They will operate the logic without a regulator and any other motors, lamps etc far better than a 9 v battery. If you are operating LEDs you are going to be dropping 7 of those 9 volts across a resistor anyway.

The capacity of an alkaline AA cell is about 2 1/2 ampere-hour as opposed to only 1/2 A-H of the 9 volt.

If you do need 5 volt I find that 3 AA cells with a step up convertor (from Maxim, LTC, or even made from discretes) is an efficient way to do it.

I find that the 74HCxx series is the best general purpose logic family.

cheers

I believe sci.electronics and rec.ham-radio are both bogus newsgroups
now - most news servers won't carry them.

sci.electronics was broken into several sub-groups several years ago:

```
     sci.electronics.basics
               .cad
               .components
               .design
               .equipment
               .repair
```

similarly, rec.ham-radio was replaced by several groups under
rec.radio.amateur.*

Two reasons:

Some apps need higher voltage - I often make circuits which use alarms (water alarms, critter alarms for my garden, etc) and there are a lot more alarms that wotk at 6V plus. I like to standardize so I don't have to stock different batteries, holders, etc.

The other thing I've found is that because 9V batteries use clips for their contacts they seem to be more resistant to shaking, moisture, or other factors that degrade the electrical contact.

But I'll consider it. That would be a good argument for the 74HC.

But you could use a 3.5 volt lithium battery. (Lithium batteries MUCH smaller than 9-volt batteries are availalble, usually intended for use in cameras.)   Or 2 AA (or AAA) cells. Or 3 AA (AAA)cells. No regulator needed for any of these configurations..

> So I'm trying to trade off the need for
> a voltage regulator, which will likely suck up far more
> current than the entire rest of the circuit,

This may or may not be an issue. It is certainly true that many 78XX-type regulators have spec'd quiescent currents of 2 milliamps or so. However, keep in mind that specifications may have been written years, or even DECADES before, and the part may have been re-designed a few times since then.   I suggest that you actually measure the quiescent current of a modern-manufacture, 78L05-type, TO-92 package part and determine what its current is. Remember that the amp-hour capacity of a typical alkaline 9-volt battery is 500 ma-hours. For a quiescent current of 1 ma, that battery will last 20 days. Is this enough? If not, use the direct-battery solutions above.

versus using

> CD4000-series IC's which happily tolerate a wide supply voltage
> but are slow and come in a more limited range of functions.

Big deal! Motorola makes a series called 78LCXX, available in 2 surface-mount configurations, which does a quiescent current of 1.1 microamps. It uses a MOSFET as a series-pass element, and is also a low-dropout (30 mv) unit.   (Makes me wish they put it in TO-92.)

I found these things with 5 minutes of looking in a couple of databooks. Chances are good that there is some sort of very-low-quiescent regulator now available that does everything you're looking for, that is if you insist on using a 9-volt battery.

In a lot of applications I like to change batteries once a year or once a season.   I didn't realize that 9V batteries had such high current capacity so I checked and you're right - a Duracell 9V is 580 mAH.That puts a new spin on it because even though 78L05's are current hogs there are 5V regulators, e.g., Philips TDA3664 which only draw 15 uA.   That's low enough to use with a 9V battery for a long time!

> If not, use the direct-battery solutions above.

I didn't want to use other battery configurations partly for the same reason I want one logic family - to keep things simple and minimize my inventory of parts, connectors, cases, etc. I also find the clip-connectors that 9V batteries use to be more reliable in the field that other kinds.

Thanks for your advice!

It's a case of horses for courses. I keep a few of each of the popular
devices in both metal gate CMOS and HCMOS but I find I am increasingly
needing to use HCMOS for projects which include microcontrollers. Wher
speed is not important the improved noise immunity of metal gate CMOS
makes their useage preferable.

Haven't you heard about up convertors and down convertors. 9 volt batteries are as EVERYBODY knows are too expensive. 4 D cells give you 6v for HCMOS a step up voltage convertor from Maxim will give you 12v for metal gate CMOS so whats the problem?

High parts cost would be a BIG problem when working on circuits that might cost ~$1.00 otherwise. Maxim IC's are great, and you pay for that quality! Then throw in the price of a good inductor and some high value caps .... Not to mention added board space...

And, of course, the Motorola 78LCXX series I told you about yesterday by
email, with 1.1 microamp (!) quiescent current.

Here's an idea: Find an electronics distributor that can put "tabs" on the
end of a 1/2AA or 2/3AA (or even a full AA) 3.5volt lithium cell. Buy a
couple dozen, or find these surplus.   Then, solder a "9-volt-type"
connector with a pigtail to these tabs (polarity reversed), so that you may
use these favored connectors as sources of direct 3.5 volts to an identical
connector that plugs in to the first one.

These are new, Canadian Government surplus, in original packaging. The supplier's name, Richardson Electronics is on the Government label. These tubes were made in the early 90's as indicated by the date codes.

I'm asking $85US each or $175US pair, I have a total of 6 each. I will pay the shipping in continental NA.

Greetings and thanks for reading,
Looking at the new r.s. catalog I noticed on page#85 there is a small dual bander (their #19-1106). It seems to have the options that I would require. I was wondering if anyone out there has tried one out and has any comments good, bad or neutral that might help myself and others determine if the radio is right for them and their area. Thanks

and have a nice day.
Regards
Ray Miller N2NJK

I don't have one of these rigs, but I have seen them in the stores and they are a nice looking radio. I like the display, which I find very easy to read. The only thing that would keep me from buying one of these rigs is the fact that it does not have extended recieve. I have been spoiled by my htx-200 with the extra listening ability and I would have a hard time going back to no extended recieve. However on the plus side, the radio having 2 meters and 440 only, should make the radio pretty intermod proof if you live in a metro area. By the way , if you get the October 2000 issue of QST, there is a review on the radio there. It got good grades in the review.
Take care and 73,

Greg - KC8KUG

Dear Readers,

Please could someone enlighten me, as to whether such a non-Hertzian radio Tx/Rx system was actually invented & could it be used to communicate through the Earths core, rather than using the atmosphere to communicate?

Someone has told me that the American embryotic forces of NATO used it in the late Forties & early 50s to communicate from Washington [the Pentagon] to SHAPE, which I think was then outside Paris, at that time.

If it is true, then are there any Tx/Rx sets around for it?

Yours,

Jim Hawthorne.

Somebody told me the USA banned export of medical
stethoscopes to the USSR because they could be used to
detect the non-Hertzian waves coming through the Earth's
core.

But then, they also banned the export of hydrogen bomb
triggers to Iraq when they were readily available in Tandy's
shops in blister cards packs.

Reg.

My my... there are some gullible people about, since when did Tandy's
sell thyratrons in blister packs. In the TV programs at the time they did
show capacitors as a smoke screen, but then how many of the viewing
public can tell the difference between a capacitor and a thyratron. Even
more, how many people know what a thyratron is and finally,  thyratrons are
 not two a penny.

Jim, you are more likely to get a positive answer if you describe what a non-Herzian radio Tx/Rx system is.

As for me, I havn't the foggiest idea what you are waffling about. And apparently no-one else has either. A ridiculous question invites a ridiculous answer.

Ask the Pentagon. Do they have a website ?

I am looking at getting one of these and wanted to know if anyone has tried one.
Thanks!!!

> Ask the Pentagon. Do they have a website ?

Would they admit to it being in existence, let alone used at all! But if little tit-bits about certain hi-tech medical equipment being stopped from export to unfavoured nations, then just MAYBE, something MIGHT be in the potential existance.

I know that many people may have thought that I am some sort of nutter. But then many folks really thought in the late Thirties, that splitting the atom, was impossible but a German physicist knew otherwise & the Americans proved its feasibility during the Forties.

Yours,

Jim.

Oooooooeeeerr
Ducks blackboard duster...... back on subject.

OK so I get my thyratron (which are now probably two a penny if you can find
a museum flogging them) and rig it up to trigger my Tesla coil.

Hey folks I've got a massive controllable spark generator, now I can send
morse
signals through the ground at about 0.1 words per minute.

Don't think it'll catch on though.
Mike

I've heard of the Tesla spark generator, which would have more than some fun, if someone set one up in the City of London, mucking up all those integrated circuits in the those financial houses computer systems. I think that it has an airborne range of around 2 miles, if this is correct. But that would more than enough for say 12 hours after the City experienced a serious share downfall!

Yours,

Jim.

In fact, last Saturday was the Cambridge Teslathon.
10 foot sparks in evidence.
Gone are the days of neon-sign transformers as the

prime movers, now it is the turn of 11kV
pole-pigs driven in reverse.

Begging one's pardon, but when using a polepig, what's
used for current limiting? The internal resistance of
the power-house?

Cheers!
Rich

Hi everyone,

I just bought a Magnum Delta Force and I wonderd how i can juse
the digital S-meter under the frequenty readout?

If anyone can tell me I would be verry happy!!!!

Thanx

I've got a 1986 Volvo 240 Sedan. I have an amateur radio hooked directly to the battery. When the car is off, the radio works flawlessly. However, when I start the car I hear a motor boat sound coming out of the speaker. If the signal is really strong, I don't hear the noise at all, but if it is at all faded, the people are barely audible.

The tempo and strength of the noise seems to increase with speed.

I tried and auto noise filter with no luck.

At this point I'm wondering if some extra shielding (say alum foil)
grounded to the chassis would help.

Does anyone have any problems with older volvos and and RF/EMI noise?

Brian,
I suppose you must be operating HF in the car, I doubt 2-M would pick up much ignition noise.
You mention "motor boat noise", which is indicative of low frequencies.
As you probably know, ignition noise "whines".   Being that the tempo increases with speed,
my guess is that it is ignition noise rather than low frequency motorboating.
Suggestions-
1. Make sure that your hood has a thick braided ground to the chassis.
2. Consider shielded spark plug cables.
Al, N2NKB

Actually it is on 2m and 70cm. I haven't noticed if it is any worse on either band. I'll do some investigation.

Brian,
Going on my experience from years ago as a service technician at a Chevrolet dealership, let me offer a few suggestions. First, disconnect the antenna from the radio, and test-drive the car. If the noise goes away, then you know it's coming in via the antenna. If it stays, it's powerline noise. The "motorboat" noise you mentioned, if antenna received, is usually indicative of sparkplug noise. Check and see if you have resistor sparkplugs. If not, you should. The cables to your plugs, the distributor cap and rotor are the next things to check. I always got a plugwire from the Parts Dept. and started swapping plug wires, 1 at a time. If the noise would go away when I found the offending wire, I'd then replace the entire set (figuring if one was bad, the others weren't far behind). Then I'd make

a careful visual inspection of the distributor rotor and cap. Especially with today's high-energy ignition systems, any minor flaw, crack or contamination can cause problems (you'd be AMAZED what you can do to a HEI system with a good 'ol #2 lead pencil!). And, as Al said, check your vehicle's ground straps. Hood to body, engine to frame, battery to body, etc.

Good Luck,
Mark K5MAR

Brian,
I think Mark's suggestion about the cables is much more practical than mine was.
I suggested using shielded spark plug wires, he suggested resistive wires.

Actually, Al, I failed to mention resistive wires, I just assumed that would be what he would get if buying replacement wires. I think that is pretty much standard these days for passenger cars and light duty trucks, but you make a good point. I shouldn't "assume" anything. Brian, if you buy new plugwires, be sure and specify that you want the RF suppression type. Unless you are driving some type of high performance vehicle, that should be the type normally installed, but it doesn't hurt to make sure. Somewhere along the way, somebody could have put a set of cheap "Universal" plug wires and/or non-resistor sparkplugs in your vehicle. It's worth checking out as a possible cause. The plugs themselves should have markings that will enable you to tell what kind they are. The plugwires are tougher to check. They may or may not be marked. If in doubt, I'd replace them myself. It's up to you.

Good Luck and 73
Mark K5MAR

Greetings Howard..

Perhaps it's actually time to consider exploring alternatives to such
tactics and finely obtain your amateur license? This may actually take
stretching your abilities and imagination beyond 11 meters...

Cheers,
Gary

I can only hope the 751A sees more use than that band (legally).

How to get photocopies of articles

What will it cost?

For the first article, the cost is �2.75. If you order other articles at the same time, add �2.00 per article. Note that multiple parts count as separate articles. Please add postage and packing at �1.25 (�2.00 for overseas surface mail).

Do I need to specify anything?

We publish several books and magazines so it is important to state that the article comes from Radio Today. Please also give the article title as closely as you can, and the year and issue it appeared in.

How do I order?

Cheques should be drawn on a UK bank and made payable to the publisher: Radio Society of Great Britain.

Send to: Radio Today Photocopy Service, RSGB Sales, Lambda House,
Cranborne Road, Potters Bar, Herts EN6 3JE.

Or you can make a credit-card order by e-mail to sales@rsgb.org.uk, by telephone to 01707 659015, or by fax to 01707 645105.

FS: NorCal 40A  40-meter QRP Transceiver

The NorCal 40A is perhaps the most efficient and clean-design
single-band QRP rig made.  The receiver uses only 16 ma!
This one was built by an HP electrical engineer, and modified
to work reliably from 10-15v.

     Band:        40m
     Transmitter: 2w at 13 v.  Very efficient.
     Receiver:    4-xtal filter, RIT, Uses only 16 ma.

Available at www.ebay.com.  Search for "norcal".
Auction ends Sunday, Aug 20.

I have an Amperex solid state 2meter amp. It is 100w mobile unit
(13.8vdc)
I am looking for a schematic for this unit. Can anyone help?
Frank

4 Refurbished with new batt and charger and antenna HT1000s. These radios
are UHF and can be programed from
375-575 mhz. These radios are in brand new condition and work fabulisly.
These radio are one of a kind i will program them and sell them for 450
each...This is a deal you can not pass up.....

Does anyone know how I can increase the distance on a Motorola two way handheld radio and a CB handheld (not yet bought)? Recommendation of name brand to make it easier is appreciated.

Thanks

Seriously, about the only way to obtain good range with an HT is with the appropriate license and through a repeater. CB handhelds have very inefficient antenna/ground systems and also suffer the same problem that VHF/UHF transceivers have - line of sight range. Assuming using the standard square root of twice the height in feet yields the range in miles, you're only going to get a little over 3 miles to radio horizon holding the handheld 5 feet off the ground (yielding somewhat over 6 miles between HTs without a repeater. Granted, if you're on a hill top or on the second floor of your house, you get more range (also

more range to a base with an antenna up higher). But working through a repeater which will likely be on a tower on a hill, you may well be 20 miles away from the repeater and be able to use it with the HT - and the repeater will give you a good working coverage many miles beyond that - especially to higher power mobiles and/or bases. Oh, yes, you can hook them into a standard antenna on top of the roof or whatever, but then you are defeating the advantage the HT has, which is portability. Besides, most HTs can suffer from intermod - I know, I live in the city and my 440 HT is unusable on a couple of repeaters when I travel through an area a few blocks away from my house.

Hello,

My name is Marc Smith, my call sign is KC8ORT. Last weekend I installed a new Kenwood TM-D700. Yesterday I was using the Cross-Band repeater function of it and was told by one of the maintainers of the local repeaters in my area that operating in CBR mode was illegal. Before I continue, let me explain how I was Cross-Band repeating first.

On my HT I was transmitting and receiving on a single UHF frequency. My mobile was setup to listen on UHF and retransmit anything coming in on UHF to the input of a local repeater. In reverse, it was setup to retransmit anything coming in on the output of the repeater to the UHF frequency.

I was told that because I am the control operator of the CBR station (the mobile) I have to ID every 10 minutes on the frequencies it transmits on. Because I am the control operator of my HT and the mobile Cross Band Repeater, when I ID on my HT and it is retransmitted on the Mobile, it's being retransmitted with my ID and is legal. That's not the problem. The problem came in when the CBR retransmits the output of the repeater on the UHF frequency. When it retransmits on the UHF frequency, the only ID on that transmission is the ID being transmitted on the Repeater and therefore illegal.

Is that accurate?

That is what I was told. However, after talking to other hams who I know use Cross Band Repeating, I was more confused than ever. One person said it was completely legal. Another person said it was controversial.

I am very confused on the legality of using the Cross Band Repeater function of my radio now. I am not using it as a permanent repeater installation, I am using it to extend the capabilities of my HT so when I am out of my vehicle I can access local repeaters on low power and so I can access repeaters that I can not access with my HT. Also, I work in an office building that seems to act like a big RF shield. I can not receive any repeaters in my building at all but outside I can just fine. Cross Band repeating would enable me to use the repeaters in my area from within the office building where I work. With out CBR, I am unable to access any repeaters.

Thank you for any assistance you can provide.

Marc D Smith - KC8ORT

One way to avoid some of the problems you're having is to only use the UHF side of the HT transmit to your remote VHF CBR (I make the assumption that you're using a dual band HT) and use the VHF portion of your HT to listen directly to the 2m repeater.... this'll eliminate the retransmission of the repeater output on UHF (saves your base or car battery the extra wear and tear). Generally, a repeater (hi power & tall antenna) is easy to recieve on an HT, even though you might have trouble 'gettin' in' with the same HT. Use your CBR only to help you 'get in'

You should be able to set up your CBR with tone limited access and be able control it (on/off, etc) from your HT via tone as well.... if the CBR is left on without a control op present at the control point (your HT or at the base) then you probably oughta' look into an ID cicuit AND (IMPORTANT) check with your area's repeater coordination group as to what frequencies you should be using.

You are correct in assuming I have a dual band HT. It's Kenwood a TH-D7A (nice HT btw). This is exactly what the guy told me last night. I understand what you are saying but I don't know how to do that with my radio. I don't expect you to know how to do it (I have a Kenwood TM-D700). If I put the mobile into Cross band mode, it automatically retransmits back to me. How do I stop it from doing that?

I'd still be back to square one at work. I can't even get a local radio station, let alone pick up a repeater.

I would only be doing the cross-band from remote control. I use my HT to bring up the CBR and use it to take it down as well as control the power, freq, etc...   I would only be using the CBR when I am remote controling the mobile and only to access a repeater I can't get to with only the HT.

```

The part below was from an issue of QST. Not sure how current the rules are.
One thing about the cross band repeat is that you do not have a way of cutting off the transmitter from where you are.

Q: How can I make my station into a crossband repeater?
A: Modern dualband or triband VHF/UHF rigs often have the capability of crossband operation. When operating in this mode, the users may call them "crossband repeaters. Actually they are often "remote bases," such as when they are used to allow an operator with a hand-held radio to access a repeater from a location where he or she would normally not be able to do so.

A "crossband repeater" (or "portable remote base") operation is okay as long as several conditions are met:

(1) The user communicates with his crossband rig via the UHF side. Since this serves as the control and voice uplink, it is a form of auxiliary operation and must be conducted on authorized auxiliary frequencies above 222.15 MHz. Since the operator is the control operator, that person must actually be able to control the station! That person must be able to turn it off locally or remotely if a problem develops. If it can't be controlled, it's not legal [97.7, 97.201, 97.213]!

(2) If the control link fails, the remote station must shut down within three minutes, which means a 3-minute timer is required [97.213].

(3) The unattended station must be identified on all frequencies on which it transmits. Since this is a type of remote base, the users who identify over the UHF uplink to the dualband radio also serve to identify the VHF output of the mobile fig. In the other direction, however, there is no way for the control operator to identify the UHF downlink from the mobile remote base, so some form of automatic identification must be employed [97.119]. Unfortunately, few manufacturers include the capabilities listed above in their figs. Hence, to be fully legal, some form of add-on controller may be necessary.

Another use for crossband operation is to link together two existing repeaters on different bands, usually done on a temporary basis during an emergency, a drill or a special event. The rules above apply.

In both examples cited above, the control requirement can be satisfied by having a control operator at the station, thus making it a locally controlled station. Although this may not always be convenient, it is a way to satisfy all of the station control requirements.

Q: Should I contact my frequency coordinator even if my crossband repeater is temporary?

A: Yes, because you might be transmitting on a repeater input (or a link or control frequency for some unknown repeater) and you could unknowingly cause interference.

Contact your local frequency coordinator for a recommendation as to what frequencies to use. Many coordinators have set aside frequency pairs that are designated specifically for temporary, portable or emergency repeaters. For the name and address of your frequency coordinator, see the latest edition of The ARRL Repeater Directory or check the listing on the ARRL Web page at: http:/Iwww.arrl.orglfleldl reguiationslfreqcoord.html.

Q: What are ancillary functions?
A: They are user functions. The FCC makes a distinction between functions which the repeater users can perform on the repeater input (activating a crossband link, getting a weather or time-of-day report, or making a phone call via the autopatch, for example), and those primary control functions reserved exclusively for the control operators in effecting basic control of the station. The rules state that "ancillary (which also means "secondary") functions" of a repeater that are available to users on the input channel are not considered remotely controlled functions of the station" [97.205(e)]. These "user" functions are conducted on the repeater's input frequency. However, the primary control functions (turning the repeater on or offl for example) must be performed via the repeater' 5 primary control system which is separate from the input frequency. By the way, there is nothing to prevent implementing some form of "emergency backup" means to shut down a repeater via its regular input frequency, as long as the turn-on function can only be performed via the pflmary control system.

Q: Are "closed" repeaters legal?
A: Yes. The FCC even says so in Part 97 in stating "...Limiting the use of a repeater to only certain users is permissible" [97.205(e)]. Just because a repeater may use some form of coded access, such as CTCSS, does not necessarily mean that it is a "closed" repeater. Many 'open" repeaters employ coded access to eliminate or reduce various types of interference, not to restrict who is welcome to use the machine.

Also, there is no FCC rule that requires a repeater' 5 licensee or sponsor to build a repeater or allow use by other operators. A repeater is not a public utility-you don't have a "fight" to use it. If you use that station in a manner that the owner finds objectionable, for whatever reason, that person has every right to revoke your privilege of using it!

Q: What other Part 97 rules concerning repeaters should I be aware of?
A: Amateurs should know that:

(1) Novices can't operate as repeater stations [97.205(a)].

(2) Repeaters may operate on any frequency authofized to the Amateur Radio Service above 29.5 MHz except for 50.0 - 51.0, 144.0 - 144.5, 145.5 - 146.0, 222.0 - 222.15, 431 - 433 and 435 - 438 MHz [97.205(b)]. Note that these frequencies include both the input and output frequencies of all repeaters [97.205(b)].

(3) Two repeater licensees must work together to solve an interference problem between the repeaters, unless one repeater is coordinated and the other is not. The licensee of an uncoordinated repeater bears the primary responsibility for solving an interference problem. This is the FCC's way ofrecognizing and encouraging repeater sponsors participation in local or regional frequency coordination programs [97.205(c)].

(4) If the control operator is someone other than the licensee, both are equally responsible for the proper operation of the station [97.103(a)].

(5) The licensee arid control operator(s) of a repeater that inadvertently retransmits communications that violate the rules in Part 97 are not normally held accountable for the violative communications [97.205(g)]. However, they will be held accountable if they become aware of the illegal communications and allow them to continue, because they are no longer "inadvertent." They must make an effort to prevent such communications from continuing.

Q: Are the rules for simplex repeaters the same as duplex repeaters?
A: A "simplex repeater" is not a repeater according to the FCC. It does not simultaneously retransmit the signals of another

station and it might not retransmit the signals on a different channel or channels, as specified in the FCC's definition of a repeater. Since it isn't a repeater, such a device cannot be operated under automatic control. If a control operator is present and controlling the device, either by local or remote control, then it can be used, but U cannot be left unattended! On the other hand, it is not limited by the other repeat rules, such as specific repeater frequenc limitations. Auxiliary stations must contr the simplex repeater and control must conducted on frequencies authorized f auxiliary operation (above 222.15 MM except 431 to 433 and 435 to 438 MHz).

Special thanks to Gary Hendnckso W3DTN, chairman of the Mid-AtlanticR peater Council's Open Band Planrn' Committee, for his assistance with this C umn. As the TMARC coordinator for years, Gary is a recognized expert in field ofrepeater coordination and corn repeater operations.

Other people have already addressed two issues. First the ID, and
yes, you must ID on BOTH frequencies you transmit on. And since
the car won't retransmit in BOTH directions at the same time....

The other is AUX operation. Which means that you cannot be the
'control operator' and be remote on a frequency below I think 222.

But as you've discovered, the CBR funtion isn't really proper for
repeater access, except in one direction. Once the radio powers
up receiving a 'far' station, and it's sending it to you locally, you
CANNOT break back in until the repeater stops and your CBR
radio then goes idle. Not good. Not practical.

But CBR makes a GREAT one way setup. Or even park a car
somewhere to act as a local 'receiver' kind of thing...

I still have the headset for sale. Price lowered! Information below taken directly off the Heil website. This is new, used only 1 time. $90.00 Shipped! Email DIRECTLY if interested.

73 Daniel KC4OXP
kc4oxp@flash.net

Pro 5 Single-sided Headsets

Pro 5 is designed to answer the many requests for a single-sided Boomset. The Pro Series Boomsets are designed to meet the high standards of the most critical Multi-Op Contester stations and DX chasers.

This Boomset allows the operator to monitor other radios during operation.

Features
Lightweight, comfortable headset
Fully flexible single-sided Boom
The ear pad is heavily stuffed and covers the entire ear
Seals out noise
Pad is removable for washing
Replacement pad available (See Accessory Page)
Specifications
Operational characteristics
Microphone works in VOX or P.T.T. modes
Boom comes equipped with your choice of Heil "Key Element" microphone cartridge (AD-1 adapter needed).

Design characteristic
Flexible material that makes mic placement virtually unlimited
Boom swivels up for travel, storage or headphone use only.
The headband has d�tentes on each side for adjustment and padded for comfort.

OK, I'm winging this from sketchy memory and with a way tired brain cell or two (read: may not be a question worth asking at all)

With the recent denial by the FCC of the Kenwood petition to allow their Sky Command System, saying essentially that since results of the remote operations would be perceived by the control op via the 2m side of things, 2m was part of the control link and hence illegal, aren't these 2m/70cm CBRs now in question?

****

As to the other replies, they're pretty much the same when I asked a similar question a couple years ago. To ID everything, I switch my HT to 2m, same freq as the CBR's 'input', and give my call. This ID's my HT on 2m, as well as my CBR on 70cm. I can verify by hearing myself on the 70cm 'half' of my HT. Switch the HT back to 70cm and continue on. Bit of a pain, but it gets the job done. Turns out I've put more energy into making my 2m HT reach the repeaters direct instead of 'toying up' my mobile rig.

Along with posting to these newsgroups I sent an email to the ARRL and posed the same question to them. Here is their response.

Dear Marc,

Your assumptions are correct. It is critical that all amateur links must be identified. Cross band repeaters can be used legally under certain circumstances. I have attached the information from the FCC Rule Book which may be useful to you. 73,

John C. Hennessee, N1KB
Field and Educational Services Department
ARRL--the National Association for Amateur Radio
225 Main St.
Newington, CT 06111
Tel: 860-594-0236
E-mail: n1kb@arrl.org <mailto:n1kb@arrl.org>
Web: http://www.arrl.org/field/regulations/

Making Your Station a "Crossband Repeater" [2]

Modern dualband or tri-band VHF/UHF rigs often have the capability to do crossband linking. When operating in this mode, the users may call them "crossband repeaters." Actually they are often remote bases, such as when they are used to allow an operator with a hand-held radio to access a repeater from a location where he or she would normally not be able to do so. For example, a hiker in a remote location might leave his car where his dual-band mobile rig can access a distant 2-meter repeater. Leaving the mobile rig on, he then takes his UHF H-T with him, and can access the 2-meter repeater via his mobile rig.

Making It Legal

A crossband repeater (or "portable remote base") is okay as long asseveral conditions are met:

1) The user communicates with his crossband rig via the UHF side. Since this serves as his control and voice uplink, it is a form of auxiliary operation and must be conducted on authorized auxiliary frequencies above 222.15 MHz. Since the operator is the control operator, that person must actually be able to control the station! That person must be able to turn it off remotely if a problem develops. If he can't control it, it's not legal [97.7, 97.201, 97.213]!

2) If the control link fails, the remote station must shut down within three minutes which means a 3-minute timer is required [97.213].

3) The unattended station must be identified on all

frequencies it transmits on. Since this is a form of remote base, the user's ID over the UHF uplink to the dualband radio also serves to ID the VHF output of the mobile rig. In the other direction, however, there is no way for the control operator to ID the UHF downlink from the mobile remote base, so some form of automatic ID must be employed [97.119].

Unfortunately, few manufacturers include the capabilities listed above in their rigs. Hence, to be fully legal, some form of add-on controller may be necessary.

Another use for crossband operation is to link together two existing repeaters on different bands. This is usually done on a temporary basis during an emergency, a drill or a special event. Again, the requirements for proper station identification and control on both sides of the dualband radio's transmissions still apply. If both the VHF and UHF transmitters are not properly identified and controlled, the operation is not legal.

In both examples cited above, the control requirement can be satisfied by having a control operator at the station, thus making it a locally controlled station. Although this may not always be convenient, it is a way to satisfy all of the station control requirements.

Contact your Frequency Coordinator First [2]

One other thing--when setting up your "crossband repeater," or portable "remote base," don't just plop down on just any old UHF frequency which appears to be "vacant!" It might be a repeater input, or a link or control frequency for some unknown repeater. The UHF output from your mobile rig might cause severe interference to someone else's coordinated operations, and you wouldn't be aware of it. Contact your local frequency coordinator for a recommendation as to what frequencies to use. Many coordinators have set aside frequency pairs which are designated specifically for temporary, portable or emergency repeaters. For the name and address of your frequency coordinator, see the latest edition of The ARRL Repeater Directory or check the listing on the ARRL Web page at: http://www.arrl.org/field/regulations/freqcoord.html.

Relaying Signals in a Repeater System [2]

Having the repeater's receiver and transmitter at one site can cause problems. These problems can often be solved with filters and duplexers, but an alternative is to separate the transmitter and receiver using a link between the two sites. Since filters and duplexers for 10 and 6 meters can be quite large and expensive, many repeaters on these bands use the "split-site" technique whereby a dedicated wire line or an auxiliary link on a band above 222.15 MHz is used to relay signals from the receiver to the transmitter. The latter is shown in Figure 2.

Some repeaters even have multiple remote receivers to expand or improve their receiving coverage. The signals from each of these remote receivers are then relayed on auxiliary frequencies back to the repeater transmitter site where a "voter" selects the best signal to be retransmitted. Note that every one of these auxiliary transmitters must be properly controlled, just like the main repeater transmitter.

They cannot just be plopped down somewhere out in the "boonies" and left to fend for themselves!

Hi, i'm thinking of getting a couple Johnson 800mhz 2-way radios, but I don't know anything about 800mhz radios, so I thought i'd ask the experts. I'd appreciate any advice on this subject.

To me, these 800mhz radios seem like CB radios, but are more like Ham radios in that they are powerful, 50-150 miles. But, I think you need to access repeaters to use them like with Ham radio. But you don't need a license for 800mhz radios? These radios are also cheap compared to getting a couple Ham radios.

Please correct me if i'm wrong, as I don't want to buy these and not be able to use them. I would like to get a couple to use in the cars, and maybe one for home as a base. Is this possible or am I wrong about all this?

Thank you!

If you get a cb handheld that can hook up to a base antenna you should get
out better than the built in antenna or rubber duck.

I have a HT750 Motorola VHF 16 Ch Radio and when I want to talk with someone else's radio I have to reprogram, but I've been over the Motorola website and check many sites on the web and couldn't figure out what I need. I found Pin out diagrams for the connector, but thats really not enough. If somebody has the software or could tell me where to get it I would greatly appreciate it.

Darren

Hello,

I'm am recently the proud owner of a 70' free-standing tower and a Mosley Pro57B. I've been working up to this installation for years and I'm having a blast! Unfortunately, so are the local birds and my cedar deck is now covered in bird crap!

I'd appreciate some helpful hints from anyone who has solved this problem!

Many thanks in advance...

Casey

Hi Casey,

I talk on VE3MOT all the time and certainly appreciate the fine job you have done keeping that machine on the air! I too have had to deal with of bird poop. Go to Home Depot and rent a power washer and clean up the bird dung. Next try a plastic owl up there on the tower that should help.   If they get use to the owl then put vaseline on the parts they are sitting on and they will not like that to much.
Usually the Owl works.

Barry

Do what the biz's have done around here.. Get plastic owls.. Once they are put up, there is no on-going cost or labor, as with just about any other solution, and they seem to work pretty well..

Hmm.. My place-of-work actually just got a couple beach-balls with giant owl-eyes on 'em which worked just as well, but didn't stay aired up for very long, which would seem to indicate that just about anything might work, just in case you can't find the plastic owls.. Possibly just plaques on each side of the tower with the owl-eyes painted on or something similar..
Be careful, tho.. Might get some religious org after you for putting giant eyes up there.. ;)

Max legal power. After a while, birds will stop being a problem, and
the cats will be fat.

You can also try a plastic owl on a weathervane.

Around here many people find that the birds get used to the plastic owls after a while and ignore them. Plastic snakes are sometimes also effective (at least for a while.)

I've seen applications where they put up garlands of wire spikes about 2 inches long spaced about 1-2 inches apart. They don't have to be sharp (you don't want skewered fowl hanging from your tower!), they are just there to discourage the birds from alighting.

I don't know if this stuff is available commercially and it might be too much to put it on all the horizontal surfaces on a tower. And then you have to worry about how to climb the thing without sticking your feet or bendint the spikes.

Have you tried ultrasonic noise?

Richard

That's not been the case at all around here (the dfw area, where I've no idea how birds learn what owls look like.. I've only seen a couple here in all the yrs I've been alive) at all.... My company, for example, has had the owls over the parking lot for.. who knows.. 5-10yrs.. and before them.. the cars would almost require a car-wash sometimes just to get home because of the birds 'roosting' in the telephone poles.. Since then, it's been a "rare bird, indeed" to find any bird-cr*p on the vehicles at all.. It's the same with a cell-phone tower over here near my house. You'd expect to see some

birds up there.. Not so, tho, since they installed the owls.. Hmm.. I assume
they're owls, since I can barely see 'em way up there...

Go to the next gun show in town, someone there will be selling the Chinese single shot pellet gun for around $20.00. This little beauty sends a pellet on it's way at about 800FPS with a single pump. Deadly accurate and nearly silent. I have pelted coyotes in the hindparts at 50 yards and you could still hear them yelping for the next 10 minutes.

Conservative neighbors should be no problem.

It's those whiny LIBERAL neighbors who will have a hissy fit.

Better yet, if you have a Walmart nearby, just go get the Gamo P-23 pellet pistol. With round lead shot (included, more from Gamo), it is highly accurate and very powerful (420fps). With a half hour of practice, you can easily hit a small animal at fifty to sixty feet. You can even get a laser sight if you need more accuracy (www.gamo.com/ushome.html).

I use it for pest control all the time. At typical distances, it does no great harm to the animal, but stings like heck.

By the way, the Gamo P-23 is a 15 shot repeater (with round lead shot). In other words, this repeater will fire 15 shots, without reloading, as fast as you can squeeze the trigger. Therefore, if you miss the target with the first shot, you have 14 more to get the job done.

Heh. Heh. The odds of hitting the coax or smaller elements is a lot smaller than hitting a small bird. Aim carefully.

Put up a statue of a great horned owl on the antenna - that should keep them away. Another solution may be to hang strips of cloth from the antenna and tower - one Expedition did that.

Hope the suggestions help.

The best solution I've found for this problem is to slip pieces of thin wall
poly pipe over the antenna elements. Bird lands, pipe rotates, bird falls off.
Funny as hell.

I'm interested in the 30L1, but I'd fly to pick it up in person...Cash!
If you are within 80-1200 miles of central Michigan.

The only way I purchase these kinds of items on the net is to see them and
pay cash in person.

I do not in any way shape of form buy though e-bay.

Approximately how much tension is recommended for guy wires on a Rohn 25G tower. Mine's 40', has two sets of guys (22 & 38'), will be loaded at approx. 10 lbs. surface area. I'm in southwest Texas, it's pretty windy here.

73's

Richard

Tension is applied until the lines are straight, and all lines must have equal tension applied. 200lbs. is about right.

I would avoid this unit like the plague.

If the poster can't be honest enough to post that it's "for auction"
instead of the 'for sale' how honest do you think the condition
of the equipment will be?

Mike

bieker, are these tubes good and how do you prove it?  and where are
you getting them , considering they are in short supply?  and oh yes,
don't tell me they test good, that really doesn't tell you much, a
mediocre tube can test good ,but it won't put out,......cd is out....

dan
Obviously you must have been burned on some tubes you purchased dirt cheap
on ebay or from a swap meet
I'm not online to rip off people.Yes I use a tubetesters and a good ones at
that.
I use hickok 539c,118b,tv7 & sencore mutual conductance tube testers.All the
testers where calibrated professionally
If you have any knowledge about tubes you that they are the best testers out
there.
Occasionly a tester can be wrong  .Over the years I have found the best way
to test a tube is to put it in to a circuit but
in most situations it is not feasible.
```

You say tubes won't put out ?? Even a weak tube will put out to a point if a radio or amp is properly tuned buy a qualified tech It sometimes is not as simple as replacing a tube

Track record on sales??
check ebay under my call sign n9tew
I dont sell tubes under a allies name

Why do you say tubes are in short supply???
In 5-10 years maybe
I saw plenty of tubes at the dayton hamvention
Bob

I'm going to buy a new cb tranciever, but i don't know witch of the 2 I should take.

I know the Lincon, because some of my friends have got them, but I hear incredable things about the Magnum Delta Force too.

I want in the first place for the SSB and in the second place for the FM.

Whitch should I take, looking at preformance and power????

I'm working here with a Shakespear Fiberglass 5/8 wave antenna, and a
Alan/CTE International K222 SWR/Power meter.
and at this moment a President George (1994 edition/first edition, black
display with colour letters and numbers)
(With code) and a 3 to 5 Amp. power supply (this is going to be a 20 to 22
Amp. power supply)

thanx

Forgot the rest of it though.  A Pres Lincoln is an excellent choice as long
as it hasn't been touched, or it has been done correctly.

Heb ik ook gemerkt.
5 Spaanse zenders met RDS op mijn draadantenne binnenshuis !

Wie weet welke zender "NATIONAL" op het RDS-scherm zet?

```
Heb ik ontvagen op 89.6.
Parallel frequenties (AF's) zijn 95.0/96.5/93.0/96.6/89.1

Answer to your question is yes. However, you wouldn't want to have in done because of severe degradation
in receiver sensitivity and low transmit power output. Components can be changed but not worth the time and trouble, being a Micor that is....IMHO. If your looking to convert a commercial radio or repeater, look for one
in the low or mid vhf range. I have converted quite a few of these with acceptable to as spec performance.
Good luck.

Best

FINAL HOURS

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=377809566

Lots of nice pictures.
I am auctioning these for a friend of mine.
Thank you for your consideration.

Kevin

For Auction on ebay an older MFJ filter that would be nice for the QRPer and CW Op without laying out a lot of cash. See the following URL:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=391421287

Thank you.

Hi all

anybody know how to open up tx range, to use on 27mhz??
been told that there is a mod that opens this rig up so that there are no gaps on the ham bands

look forward to any replys

howard

ring up icom at hearn bay and tell them you have a rig that has been opened up on the rx and ask them what number diode is it to close the wide band rx up.
when they tell you the number youll be able to cut that diode and expand your rx.thats all i did

Subject basically says it all!

I'm looking for the original mic for the Icom IC-737 which the manual says it's a Icom HC-36. Please email me directly at ngwd@flash.net or kc4oxp@flash.net

I have for sale, a Icom HC-14 (which I believe went to the ICOM 706!? It has the keypad on the back of the mic, the condition of the mic is excellent! Best reasonable offer. email ngwd@flash.net or kc4oxp@flash.net .

I think I'd have to question the base assumption there. The lower the rotator, the longer the mast. Even if you assume the bearing load will be taken up by a thrust bearing, the whole system gains in mass and so has more inertia, which translates to more power required to turn the system and more stress on the brake.

I've come on to a Motorola Micor C73RXB repeater that is tuned around 170 MHz. My question is can these repeaters be tuned down into the two meter band. I have the manuals they say that the PA operates from 162 - 174, and the exciter from 150.8 - 174. I know that the ExecII radios could be "slid" down some outside of their specs, how about these anybody know?

Thanks

Richard /N5YPJ

I have 7 sections of Rohn 25 G Tower for sale (approx 66 ft) in excellent condition, on the ground. This includes the "pointed top section, which has no bushing so it can take up to a 2 inch mast. Also included is the rotor plate, and a nice side arm for mounting an additional antenna onto the side of the tower. No bolts or other hardware included. All or none, I can't part or section it out so it's all gotta go at once. First $250 or best offer gets it. I am in Del Rio, Texas, 150 miles west of San Antonio, 150 miles south of San Angelo, this is the pick up price, I can deliver in the area (outside Del Rio) for a nominal fee.

Hello All,

Visit my page for items for sale. Will be listing the items in the next 7-10 days on E-Bay. I'm building the list and will be adding photos in the next couple of days. You can view the page at: http://www.jones-clan.com/EBay/

Cleaning out the shack and do so spring cleaning. I will consider any serious bids - if I recieved none, will list it on E-Bay. Will use the funds to upgrade the shack and help out with out ATV Repeater with the school club.

Happy Viewing.

Hi everybody,

Thank you for reading this.
I'd like to build repeater for my town. I've got everything except two resonators for frequencies 8095,833 kHz and 44808,333kHz. I tried different sources on internet (online shops, altavista, newsgroups) but unsuccessfully.
Could someone give advice where I could get them ?
I will also appreciate any www links/e-mails/phone/fax of shops with large choice of resonators.

I beleive you are looking for manufactures of crystals for oscilators
and filters.

Manufactures in the United States

International Crystal is generally considered the best but also most
expensive.
Jan Crystal in Florida
Sentry and Salvory Crystal on Oklahoma
Peterson Crystal in Iowa

All but Peterson are on the Web.

No, probably not. Just cut a dipole for tghe correct frequency and go with that. No need to buy an antenna anyway.

  Only if the antenna tuner will tune the antenna to the 6m band.  In
other words, is the tuner capable of handling the 6m band?  If so, the
next issue is to see if the tuner can get your specific antenna to tune
properly on the 6m band.  And for that, your best bet is to simply try it.

Hi,

Who can help me with the mods for at least one band up for the Danita 440
and/or President Wilson.

If you have the answer please mail me at:
Jeroen@vossers.tmfweb.nl or
wr2324@wolmail.nl

Thanx!!!!

Jeroen Jansen

New Hams, you can help too!!!!!!!! Read on!

The Murgas ARC will once again be operational for the ARRL June VHF contest. We are at the confluence of Luzerne, Columbia, and Sullivan counties in Northeast Pennsylvania(FN11uh.)   We will work you, just yell! The contest runs from 2PM Sat June 10 through 11PM Sunday June 11(eastern.) We will be running 6m, 2m, 222, and 432/440. All modes.

FM- 2m FM will be done hourly starting on 146.49 and moving to the other standard freq's. This will begin a couple hours after the test starts. FM will be left on continuously on the other bands, however the ops sometimes do not pay attention as well as they should.

If you work us on one band please ask for a schedule for another. All stations are interconnected and you will instantly be met on another band. You may also do this if you are unable to secure an answer from us on FM.

I do not know what everyone has done, but SUBSTANTIAL improvements have been made to the 432 and 440 FM stations. If you have been unable to get a contact in the past now is your chance.   We do QSL.

With any HT you can work us from a realistic range. It is not uncommon to work HT's with ducks at a distance of 200 miles! We do have directional antennas, though, so patience may be required. We regularly watch crystal clear TV from the other side of the state.

All you need for an exchange is a callsign and a grid square. If you do not know your square go here: http://www.arrl.org/locate/grid.html

There will be an AIRSHOW at the local airport during contest weekend. If you have an HT a contact would be appreciated.

For the most part advance schedules are not accepted. However if you are seriously interested in doing something unique you may contact me no later than Wednesday evening Jun 7 and I will forward your email to the right person. Send it to jss167@yahoo.com

Our club website: http://www.qsl.net/k3ytl/k3ytl/index.htm

Thanks. All contacts are greatly appreciated.

Get real? I think I am. For example, I have lobbied against the obsolete CW requirement. However, running an HF rig is VERY complicated for the average "chat" user. There are rules and reasons why an Amateur Radio hobbyist needs the theory and practical electronics - the rigs can transmit in all modes, at any frequency all over the HF bands and beyond. Most VHF rigs, by contrast, are very simple, AM or FM, few with SSB capability, etc. and difficult to build, one of the reasons originally why non-code licensees got the chance to use VHF frequencies.

Commercial radio stations have strict rules about spurious transmissions. But if it's easy for a Ham to pass a test and get by without any theory, let alone understanding of what they can do with their rigs, then sure enough those people will be transmitting all over the place, seding up serious harmonics etc. without understanding that they're interfering with Emergency transmissions, etc. With 5KW afterburners.

Ray

Sounds very noble, Ray. But, unfortunately, it's not REALITY. I had nothing to do with the stupid incentive licensing ARRL shoved down our throats that started all this. I had nothing to do, either, with multiple-guess questioning! When I took my Novice, Technician, General and Advanced, you were handed such questions as DRAW......EXPLAIN......DESCRIBE HOW TO......etc. If the GENUINE FCC field engineer reading your PROSE didn't like what you said, you DIDN'T get a license....period....see you next month. You copied CW, now totally obsolete and should have been eliminated 20 years ago, straight from the tape....letter for letter.....no multiple-guess questions. One test I took was 5-letter CODED GROUPS....you copied one minute with NO errors out of 5 minutes......

Let's put the technician back in ham radio. We'll give a TECHNICAL test of MODERN electronic practices and theory....not vacuum tubes and crystal receivers, like they used to. The CW test won't be necessary. ONLY good technicians will be allowed to have ham licenses, as it was intended to be. NOONE will see the actual test questions, which will be changed every other month to new questions so the ham schools won't be teaching the test....like we all are now.

I'm for it....100%....because I could pass any of them. But, it's not REALITY.....political or practical. Ham radio hasn't provided the world with electronic technicians since Intel created the 4004 microprocessor. NOONE needs ANALOG technicians to run AM tranmitters full of tubes!! Get real!

Larry....It's a HOBBY, dammit.....

Commercial radio stations don't even HAVE licensed operators, any
more. Only the chief engineer needs a GROL. FCC told the
broadcasters if they didn't hire their quota of blacks at the
transmitter, they were going to cancel their licenses. Broadcasters
fired back that they'd hire 'em IF they could find some that had FCC
licenses. Noting the number of black broadcast engineers with 1st
phone licenses...even down to 3rd licenses you could count on fingers,
FCC simply deleted the requirement.....

Hi.

I have a TH 27A that was in storage for a number of years. When taken out of storage it stopped working, even though the battery charged ok.

The display and all of the keys on the keypad operate normally but there is no receive and no transmit, although by looking at the display, it indicates that the unit is operating.

Does anyone have any suggestions as to what might be wrong? I tried everything in the manual, (microprocessor reset, etc) but I can't get it to run.

I have no schematic, so if anyone can make me a copy it would be appreciated and I'll gladly pay for it.

Regards
John

Thanks for the advise, but the electronics per se are not the problem. I'm out of practise, but can still do fairly complex analog and digital circuit analysis, and given the right test equipment and schematics can troubleshoot most anything to component level. Started at the tender age of 12 or so.

In general I agree with you though. Given that many HAMs can still contribute to the hobby without holding an EE degree from MIT, perhaps an intimate knoweledge of analog circuits isn't really required. Off the shelf equipment and another HAM (or paid professional) to help you get your shack set up and reasonable periodic inspection should be sufficient to ensure safe and legal equipment.

On the rules and practices, it's another matter. Does the test question pool cover all the possibilities and regulations? I suspect that there is just a sampling from the FCC codes, to measure "how well you've studied". Apart from that I find it easier to get a good grasp of the subject matter if I can see the whole of the material presented in a logical sequence, rather than simply memorizing a few answers to selected questions.

For the parts that affect me and my operation, those will become ingrained over time. I can always look it up if I have a question or don't recall some particular esoterica.

Maybe this is an argument for a more comprehensive test. Make it difficult and open book, and gauge how well an operator can function in an environment closer to the world in which they will be working rather than a multiple guess test that measures what they remember on the day they take it.

I suppose that after studying the material I've ordered I will take the entire battery of test questions and then review why I missed any particular ones. Studying the material is just another form of memorization, and one that works better for me (and is more enjoyable) than rote memorization.

I never memorized the resistor color code but I still remember "Bad Boys Rape Our Young Girls, But Violet Gives Willingly". :-)

Thanks, I'll go looking for "Supermorse". When I was a kid and had
visions of building my own rig, I got up to about 5 WPM more or
less and "plateaued out". Realizing that I needed 13 (or 15 or
whatever it was at the time) WPM to get privilege in the bands
I really wanted, I gave up.

I hope your commentary is not directed at my description of an autopatch for my wife to save on long distance bills. It was totally toung-in-cheek, going along with the tone of the rest of the note. I don't think my wife would put up with much complexity beyond dialing the 10 digits, and in fact I believe she's got the speed dial programmed so it's down to only two. :-)

Although I'd like to try it just to say we've done it.

Stop by the house. I got a real DOG of a Baldwin church organ with an
early computer on about 48 daughterboards to fix in the
morning....$$$$$

Naw....All you need to be a ham these days is the Ham Radio Outlet
website (www.hamradio.com) and a VISA with a $50,000 limit, Platinum
preferred. They'll take care of the rest....

No, the test questions only include the stupidest rules to rote
memorize and have nothing to do with the day to day operation of your
station. Little jewels you need to rote memorize such as how many
months before you start assembling your own rocket and satellite do
you need to notify the FCC (27 months) and how many days before launch
from the cow pasture out back do you notify them again, (doesn't
matter, there's only one answer on the test with 27 months on it).
There's lots of nonsensical questions like that. And, EVERY ham going
up for EXTRA class must MEMORIZE the entire rules and regulations for
being a Volunteer Examiner.....as if he couldn't LOOK UP the rules
when a question arose. Oh, no, he's gotta have it all in his
head....at least when he TAKES the test.

How stupid.....Not a single question on how to tune up a big linear
with twin 4CX20,000A7s in the final he really needs to know!
>

Too bad someone doesn't have sense enough to allow you to bring the
RULES and REGULATIONS to the test so you can simply do what's
logical....look it up. That is NOT an option.
>

I used to teach electronic technicians basic and advanced electronics. When I got done with them, you could hand them a schematic and point them towards the cabinet and leave. THAT was my final test. The class was given a TV, piece of test equipment, stereo, PA system amplifier, or the big broadcast transmitter I hoodwinked a local station out of when they got a new one. (No, we ran it on a dummy load....) Given the piece of equipment I had installed several problems into, their job was to take the test equipment, schematic and their brains and MAKE IT WORK AGAIN. BellSouth used to send recuiters 50 miles to talk to my graduating class because they were THE BEST. Noone left the class without at least 3 job offers or I didn't do my job. The first black teenager I put through the course was driving a tractor on a tobacco farm. He's the EL NUMERO UNO of the ESS switch providing long distance interconnect to a major portion of South Carolina, now. His nickname, which I still call him to the incredulous staff in his office, was/is "Booger"! Last time I met him he took me to lunch at his golf club.....a long way from that tractor.

Keep taking the tests, memorizing the questions and answer on:
http://www.clicktron.com/ham/index.html
until you get to score about 80% on the tests. Don't be afraid to WRITE DOWN the ones you're not sure of...with their answers...to take with you. Get a little notebook you can carry and look at when you're in the head (on topic?) or laying around bored to death with the same TV commercials over and over. Practicing on the actual test questions makes taking the test a joke.

That saying worked great until a girl named Violet joined my class. WE had to modify it. She was a big girl, about 230#...country girl. I, for one, didn't want to cross her!

73, Larry W4CSC
Charleston, SC
look me up on qrz.com! See what 70KW can do to a 300,000V insulator on 40 meters!.....aboard SHIP!....pirate radio ship....put my call into the Callbook lookup box.

Hi, all ..

Of course there is this:

In a world so complex, more and more people are just simply going to go outlaw and say the heck with ALL of you and they DO NOT CARE what the right or wrong way is.. they will use what damn well suits them.. the policing organizations will only catch the extreme radicals and the rest will have successfully destroyed your credibility, as the CBers who ignore the laws and the hams who think it is funny to mess with them have done on their bands..
So what do you want a lot of happy folks who are learning and working to learn, or a regulation-prone outlaw-ridden tyranny of the air?

Believe me compliance with the rules is strictly voluntary.. anyone with money can ignore them and most do.. including many you think are legit..
I personally believe that some regulation is good and necessary.. but that the times decree that maybe we do not have to be as strict about

things as in the bad old days... we are not storm troopers, after
all.. we are not tyrant's children..

Your choice..

Jim

After the recent aurora it occurs to me that it might be fun to make a magnetometer and come up with my own "k index". My question is this: all the designs for homebrew amateur scientist magnetometers I've seen involve actual magnets, typically suspended from wires or floating in something.

But solar flares are known to induce considerable currents in the power grid - even to the point of blowing out transformers and knocking out power to whole cities. (e.g., Quebec, 03/13/89) This suggests that it ought to be possible to make a simple detection apparatus involving detecting changes in induced current flow in a wire, and thus making something that's purely electronic with no moving parts.

Basically this is a sort of "antenna". Now granted that the power grid is an antenna tuned to a very long wavelength, whereas I had in mind something measured in feet, not hundreds of miles, but then again I'm happy to measure fractions of a microamp; I don't need to detect hundreds of amps.

Does anyone have any thoughts or suggestions for this? Can disturbances in the earth's magnetic field be measured electronically with amateur-level technology?

Thanks in advance!

Please forgive cross postings,
What you will measure with your coil of wire is in fact dB/dt. You will need lots of winding and/or a good pre-amplifier. You can apply an Op amp across your coil to integrate and measure a sort of approximate B(magnetic) field. You could even make a proton precession magnetometer as long as you can wind coils and implement a good frequency counter and oscillator. An alternative technology is the fluxgate magnetometer, a bit trickier, but fascinating physics. Depending on your level of keenness you could construct any one of these. Remember that everything was a prototype once!
For more information, consult a geophysics text, eg. Telford Geldart and Sherrif, Applied Geophysics. I know someone who built their own optically pumped magnetometer for a PhD, but don't try that at home!
have fun,
Andrew.

The current is not that considerable (a few amps). The problem is it is almost DC. It causes the transformers to saturate, causing harmonics. Protective relaying and static power factor compensators cannot take it. And you need hundred of miles of line...

If you need something more practical, look for a flux gate magnetometer. Popular electronics had an article on that many years ago.

While doing a web search on a new helium magnetometer last year I came across a information on building your own proton magnetometer. If a frequency counter is available the rest of the construction should not be too difficult. The project was aimed at the high school science fair level.
Unfortunately I do not have the URL but if you do a search using dogpile.com on "proton magnetometer" you should get some hits on the site.
A last possibility is that a few years back a company in the UK was making single axis solid state magnetometers, the cost was around 40 pounds (IIRC) at the time. Sensitivity was in the area of five milli-gamma.

Several people in the AAVSO Solar division, including myself,
have built magnetometers for tracing local magnetic field
changes. I have an article with descriptions and drawings
as to how to make one at:
http://www.regulusastro.com/regulus/papers/magnetometer/feature.html

This was made a couple of years ago, and has since been revised. The
AAVSO also has a mail list associated with magnetometers and associated.
I would be happy to help anyone build one...very easy and rewarding.

Hello,

Thank You for taking the time to read this post. I have a 2mm ham radio (H.T.) , I live in Nebraska and wanted to have a better battery for my radio. I have used W & W Batteries for 3 years and like them so much, I became a dealer for them. Check out my web site to see what I have to offer for ham radio batteries. http://baersbatteryservice.homestead.com

There are a number of sites on the web for 10M beams. If
you find one of them, you can always just 'lengthen' the
dimensions by the frequency. Ie, use whatever the

```
dimension is by 29/27 and you'd be very close.

Look you have already posted this same damn URL at least 8 times in one day
under heaps of different headings.  Piss off spammer.  i am not even going
to bother looking at your most likely shithouse site.

Just my own opinion .. I have decided that I don't like EBAY sales.

I would much rather come to some agreement instantly with some other post which sells an object ... and to find out immediately whether or not I will get the object. Waiting out several days to find out whether or not I win a bid does not get me the coveted object usually.

To my experience, most EBAY bids wildly exceed the worth of the object.
OK for the seller, I guess, and for those who simply MUST have it at
any price.

I have read that the lower (further from the top) that you mount a rotor in a tower the better for the rotor. I have a forty ft Rohn 25G, and am interested in mounting my rotor as close to ground level as practical (one less reason to climb also). Any suggestions or ideas would be immensely appreciated.

I have installed as Rohn 25G with a 25AG top section. Is there any way to use a thrust bearing with this type of setup? Any ideas / suggestions appreciated.

Praetorian,

I see this complaint all the time about eBay. There is a very simple solution to your gripe: Just look at items that are about to expire. If you don't like the bid price at that point pass, else make a bid and in a short time, maybe even minutes you'll know if you won. Actually a faster response time than contacting most NG sellers. Also, eBay has a better search facility.

73,

Casey

Can you please explain to me again how passing a cw test of 20wpm will, prevent someone from, in your words, "have a clue as to the actual workings of the thories they are being tested on". I know plently of people that can do cw (20wpm or better), yet cannot change a lightbulb. I agree, keep the cw requirement high, in fact, let's raise the standards to say 35 - 50 wpm. Then the question will be, do you still qualify for this exclusive fraternity you call "extra"? EXTRA what? I think technical knowledge is much more important than code speed, hands down.

I don't care.

Point is that everyone says, "I remember when...   ...it was better then."
Get over it, the times they are a changing.

Why do you continue to attempt to value yourself greater than your peers
based on what? 1) The fact you passed a test under the old rules. 2) How
much lomger you will be missed. What's next? My daddy can beat up your
daddy or my bike bike is newer than yours? Get over it. Either adapt to
the changes and accept them, keep bitching until everyone tunes you out or
just walk away.

The point is that you cannot just cram for the 20 wpm exam in a couple nights and pass it... you have to actually acquire the skill to receive cw to pass that exam.

You need no skill or real knowledge to pass any of the written 'tests', since the questions and answers are already public knowledge for months in advance.

What would you think of the calibre of a college education where all the exams at the school were done as the written tests for ham licenses are?

> I know plently of people that can

Again at this point you would be proposing a change. As such you would have to demonstrate the reason for such

Where do you figure it is exclusionary? And do you not notice there is
also an additional TECHNICAL knowledge requirement allegedly for Extra
as well?

Yep, you have to rote-memorize like crazy. Why is it OK to rote-memorize
Morse code and not OK to rote-memorize the written exams. Inquiring
minds want to know.

You gotta be kidding, Gary. From Webster's: "rote - routine or
repetition carried out mechanically or unthinkingly." That
describes 20wpm Morse *perfectly*. In fact, some Morse gurus have
said, "Repeat it over and over until it becomes mechanical." If
there ever was a good description of 20wpm Morse, it's "rote".

Piece of cake, Bob. If that had been the requirement, I
would have been an extra a long time ago.

No, YOU have to be kidding, Cecil. You are comparing apples and oranges when you say that memorization of Morse characters to build speed is analagous to memorization of exam questions. If you have successfully "memorized" Morse at 20 wpm you have learned a language. You can recall this information again and again and in doing so develop a skill (yes - an out-dated, out-moded antiquated, etc. etc. skill). What does one "learn" by memorizing exam questions? Anotherwords - who can retain a larger percentage of the acquired information at a later time? That is the difference between memorization and learning.

Ummmm, Mark... what would make you say such a clearly disproven thing?

After all, all the unacceptable changes came about by whiners such as
you (or at least those you appear to be supporting).

As such maybe if I and others complain enough we will get what WE want,
ya think?

Of all the things 20 wpm MIGHT be, "rote" damn sure ain't ONE of them!
Copying, and WRITING DOWN CW at 20 wpm is a SKILL that must be
practiced - much like juggling or learning to play a fairly complex tune
on the piano - CW at 20 wpm is difficult for most because at that speed
you MUST be capable of deciphering characters and common words by their
SOUND, not ny counting dits and dahs - AND, due to the speed, you must
also be writing it down 2 full characters after it is sent - an act of
coordination and concentration FAR in excess of that at 5 or 13 wpm...
Copying 20-40 wpm in your head is not that difficult - it's doing it
while writing it down that's hard...

Cecil
Your wasting your breath. It is obvious that his mind is closed to
this subject. He is under the delusion that someone who has passed
the 20 wpm code test is superior to all those who have not. When did
the ability to do code at a fast speed justify such inflated ego's.
I am an Extra and was glad to see the end of the 20 wpm code as
a right of passage into the Extra Class ticket. The 20 wpm code test
has hindered many from becoming Extra's. Many who are Electrical
Engineer's and so on. Some of us found doing the code difficult.

Another one avoiding the question. Cant any of you liberals answer a direct question without rambling on like you have intentions of answering but never do?

Here is the question again, Lets see how long it takes for some one to give an actual answer....

Can you please explain to me again how passing a cw test of 20wpm will, prevent someone from, in your words, "have a clue as to the actual workings of the thories they are being tested on?

Only idiotic fools with closed minds do not accept change.
You must be one of those Extras' with one foot in the grave and the
other foot on a banana peel. You may have seniority, but you dont have
priority. Get real and wake up, because this is the year 2000, not
1941.

Its kind of funny that after all these years, These people started complainig about the question pools. Why didnt you complain before you took your test. You get your tickets then complain about it. What a bunch of bigots. When someone changes the license structure you complain because it doesnt benefit you!! I'm not going to sit here and complain about the only License Class that got royally screwed, But I will mention that The Advanced Class Op has the only reason to complain. Not because of the code, but because he is in the same boat as a general. I feel for you guys, But the constant babble is getting you no where.

Mike,
As i said in a different post, knowing you probably dont want any pitty, but I do feel for you and the rest of the Advanced users due to the fact that you are now in the same boat as a General. At least now you have an advantage and all you have to do is take the Extra written and present it to a VE after April 15th to get your Extra ticket. Only question I got is, Since you are an Advanced, Will you have to take the complete Extra class question pool after April 15th which includes the Advanced questions as well?

I recently have taken several of the Advanced sample test (without even studying for it) on QRZ and passed but dont know morse that well to become that class of operator. Now that the code requirements are lowered I can do what I wanted to since I first got my ticket and had a strong interest in ham radio. Now that I can go for it, I will be doing my best to get there.

Really? Where are the alphabet and syntax rules for the Morse language?
I was under the impression that Mr. Morse spoke English and invented a
coding system for the English language and it was originally designed
to mechanically punch holes in paper tape. If you're not coding the
English language, how do your fellow American hams ever understand
you?

Morse code and Ohm's law are learned exactly the same way. If you
use it, you remember it. If you don't use it, you lose it. After
49 years as a ham, I am very practiced in the use of Ohm's law.

Well, not exactly. There will be no new Advanced after April 15.
Until that time, we advanced hams don't have to repeat the
advanced exam. All we have to do to qualify for a future extra
license is pass the present (4B). That's what I intend to do
tomorrow.

With all due respect Cecil, the dictionary suggests repetition . I don't see where the word 'rote' applies to CW at 20 WPM. The tests are changed regularly. Simply put, you will not do random CW at 20WPM with rote memorization. On the same subject, why in the world does any one want to make an issue out of one's ability to do 20WPM or 2 WPM. What possible difference does it make? Does that somehow make one person 'better' than another?I don't think so. This coming from a person who has been in Amateur Radio since 1950 and operates regularly at 35 WPM. I only just wish that we could all get along better and make a better attempt to get along. There is plenty of diversity in Amateur Radio for all interests. 73........

From Webster's: "rote - repetition carried out mechanically or unthinkingly."
That is an *EXACT* description of what I'm doing when I receive Morse code.
Code gurus tell us to, "Repeat the code over and over until you can do it
without thinking about it".

The 20 wpm code test has hindered many from becoming Extra's. Many who are Electrical Engineer's and so on. Some of us found doing the code difficult.
> Mike AB0IV
>

Here we go again....those poor electrical engineers....can't learn code and need special treatment so they can become Extras. How about those who are totally non-technical by education and still manage BOTH the code and the theory. Is there some reason that EE's should be exaulted in some way?

Shall I go dig up the many posts where you stated
unequivically that you would NEVER get an extra class
license under any circumstances?

Aw, well...... You never had a half ounce of credibility
anyway.

If all who post here would use the energy they expend p---ing and moaning about the death of amateur radio
and .would accept what they can not do anything about; then work to get the hobby back on track. it just might not die.

I wonder why all this hoopla is taking place on a "computer" based newsgroup instead of over the bands?

I am not taking sides one way or another, but when I went to
Washington State University, learning a computer language fulfiled
a foreign language requirement.
In reality, learning the moris code is another way of expressing a
language. Italian and Spanish are very close. In fact, if a person can

real Italian, he can often understand written Spanish. Yet both are
distinct languages. I am not tryig to argue anything, but just making
a comment,
73's Henry

Cecil, let me offer the thought that "CW" is actually a superset of
Morse. While Morse is a simple - although somewhat unique - alphanumeric
symbol encoding system, CW communication involving Morse has over the
years evolved into a pseudo language with the syntax, et al that you cite
as lacking with Morse alone.

It is entirely possible - and it is done daily worldwide - to communicate effectively over a limited set of topics of mutual interest with amateur stations worldwide whose knowledge of spoken English is anywhere from limited to entirely lacking. This has been especially true with Russian/USSR stations over the years.

The commonality of abbreviations, subject matter, and even the "order" with which topics are discussed or presented all combine to provide a language-enabling mechanism that is actually rather effective, however limited in potential content.

ICOM IC-706 HF + 6M + 2M Radio $1400(Canadian) or reasonable offer
Comes with MB-62 Mobile mounting bracket for faceplate & OPC-581 3.5M
separation
cable, original box, spare power cables, manual, and manual for CIV control.
Excellent like new condition. Radio specs are

100W HF all mode, all bands, except AM which is 40W,
100W on 6M all mode, and
10 W on 2M all mode. (Amplifier listed below)

Heil HM-10-Dual microphone (type 4 and type 5 cartridge) $150 c/w FS-1 Foot switch and MA-1 Adjustable boom.

MFJ 949E Deluxe Versa Tuner II $150 Like new, works great

Daiwa LA-2080H 2M Linear (FM + AM/SSB/CW) amp with preamp $150 Brand new still in box

Bencher BY-1 Iambic Paddle (black base) $75

All prices listed in Canadian currency. I have been using the station for approx 1 year, and now must sell quick. I have received excellent signal/audio reports from all around the globe.
I would prefer to sell the items as a package for $1800 obo but will consider seperating for pricing listed above. To buy the tranceiver, you must provide me with proof of a valid amateur radio licence.

I wonder why all this hoopla is taking place on a "computer" based newsgroup instead of over the bands?

Here, they are automatically "published."

On the bands, they might be sending their message(s) into thin air for
all they know. THAT'S SCARY - to them.

Here's an idea folks --

What about having a "20+ WPM" (ARRL?) certificate or award that could
serve to recognize those who believe that recognition of their code
speed is crucial to their self-esteem. That way, the technical
questions related to licensing can be segregated from the code speed /
rite-of-passage debate.

It's a good idea. It should also include SENDING 20WPM using a straight key.

The testing should be done at hamfests, with results posted on a board, so that we can properly recognize those who pass . . .

. . .and those who DON'T. heheheheh

Give us a break! This horse has been beat long enough!

a story comes to mind about a truck driver from the USA
stuck up in Edmonton waiting for a dispatch back to the 48
He was mad as hell to be there; so far from his home; that he was
complaining about everything. This big Cannuk comes over and
says to him "you no like Canada?---then get the f--- out"

If you are so sure its over feel free to do whatever you like with your
ticket and rigs
I, for one, am not quitting.

We're talking about the coding *SYSTEM*, not the content of the communication.
Please describe how you use CW without memorizing the code/character
translation. Do you develop Morse code from first principles every time
you use it. You seem not to know anything about Morse code. I suspect
a CBer on the troll.

> It is the same as your french teacher telling you not to

Ah, but nobody thinks in Morse code. You really are a CBer, aren't you?

Neither you nor anyone else has in any way, shape or form shown this
change to be 'for the better', Cecil.

Ever heard the phrase "putting your cart before your horse'?

You just come across as a fool when you do that.

Alphabet rules? What do you think the [.- = A] are? As for syntax it depends on what other language you are using morse to communicate in.

> I was under the impression that Mr. Morse spoke English and invented a
> *coding system* for the English language and it was originally

> you?

Irrelevant. It is still a language useable by non enlish speakers to communicate at least the basics of a conversation with enlish speaking hams, and vice versa.

> Morse code and Ohm's law are learned exactly the same way.

BS, Cecil.

> If you
> use it, you remember it. If you don't use it, you lose it.

Actually it is much like riding a bicycle. Once you learn it right you never forget it... you might get rusty from non-use but the rust shakes off fairly quickly.

I guess it is just becoming more and more apparent that Cecil just never learned cw well and arrogantly brandishes his inabilities and the ignorance they create as some kind of perverted 'virtues'.

> After 49 years as a ham, I am very practiced in the use of Ohm's law.

But clearly not in the use of cw.

Then you are unique in the universe, Cecil.

Because since cw is used for COMMUNICATION and part of the definition of COMMUNICATION is the exchange of ideas, I fail to see how one can consider the exchange of ideas between individuals, each exchange being completely different for the most part, to be 'repetition carried out mechanically'... ESPECIALLY 'unthinkingly'.

Maybe you operate morse on the 'infinite number of monkeys at an infinite number of typewriters for an infinite period of time recreating all the works of Shakespeare' model, but I do not think most people do...

and likely your random dits and dahs on the air would legitimately be considered interference under most definitions and result in your losing your license. (not that it would be much of a loss to the hobby apparently... you certainly come across as a 3870 kind of guy...)

> Code gurus tell us to, "Repeat the code over and over until you can do it
> without thinking about it".

It is not 'not thinking about' what is being sent... it is 'not thinking about' the mechanism of the communication.

It is the same as your french teacher telling you not to translate/convert but to actually think in the language naturally.

But clearly Cecil lacks the wit to comprehend ... maybe we should just pity him for his ignorance and mental limitations which he is so clearly demonstrating.... what do you all think?

It was never a situation that the C.W. requirement kept out all the dregs.
One has to listen to any portion of the band to hear the trash that is on
it. Rather, it was a lessening of the overall requirements, especially the
written exam, that allowed the bands to become what they are today.

One simply has to look at "every" period of deregulation to literally be able to plot a graph showing the downgrading of amateur radio. C.W. simply kept out of the hobby those too lazy to learn it; the fact that there are some extra class schmucks simply points to the fact that C.W. is that easy to learn!

But when you look at "when" the written test become easier, MUCH easier and then, only adding insult to injury, became multiple choice, again, you could draw an almost straight line downwards from then to where the hobby/service is today.

Most hams don't even know how to read a resistor, let alone have a proper understanding of Ohm's law. And now, even lessening the C.W. requirements to only 5 wpm for all classes of licensees!.....does nothing but rings the death knell to such a beautiful way to communicate.

I hope enough hams come together and write, petition, whatever, the fcc and the arrl in order to reverse both the deregulation of C.W. and the theory needed/required.

Phil

KA2IWR

P.S. Those not wishing to do "any" studying for advancement, simply wait. Probably in a few years you'll have full access to any frequency you want by the further deregulation that is obviously going to happen, sooner or later.

Can't you guys take this whine somewhere else? It doesn't
belong on r.r.a.e. You can't change it, the FCC is following
the lead of most other countries who did the same thing
several years ago. Go ahead with any email flames, I know
and use the code often on eme and aurora where it is
neccessary but it is no longer needed as an entrance filter
(listen to 75m some Fri night, talk about trash!)

Estimados colegas, quiero pedir mil disculpas al grupo de AMSAT-EA y mas concretamente a su presidente Al Quiroga, debido a un c�mulo de circunstancias cre� que habian desaparecido todos, mande correo a ea4lh@amsat.org pensando que era el del presidente y nadie me contest�, intent� conectarme a su gran pagina web http://aintel.bi.ehu.es/~amsat-ea y habia desaparecido, le pregunt� a un amigo (EB5HSC) si �l sab�a algo y me decia que no, que estaba igual que yo....pensando en lo peor puse un mensaje en las news preguntando si alguien sabia algo y all� se qued� el mensaje m�s solo que la una, como casi todos los menajes de las news. Finalmente puse otro mensaje en las news un poco m�s fuerte (mil disculpas again) y por fin se v� que alguien lo vi�.

Hoy 16/02/2000 a las 17:30 me ha llamado EA1BK, tras una larga conversaci�n han quedado las cosas aclaradas. El caso es que ya todo aclarado me ha dado un n�mero de tel�fono para que si alguien est� en el mismo caso que yo, tomen nota :609004514 hablen personalmente con �l.

Bueno pidiendo mil disculpas a todo el grupo AMSAT EA, un saludo.

Salvador C.

A buddy of mine and I are wanting a means of reliable, mobile 2-way communication throughout Oklahoma City....I'm looking, in particular, at the Radio Shack HTX-242, a 45 watt 2 meter radio. I'm hoping for a range of 30 miles or so.

Is this unrealistic? I'm totally unfamiliar with ham radio and would appreciate any advice anyone might have to offer. Thanks..

Here is some simple advice, Go get your ham license and then get the radio. With the use of many repeaters on the 2 meter band, you may go further than 30 miles maybe 60 or so. There are a few here in California that reach as far as 150 miles that I know of...

Hope this helps!!!

Well... Mobile to mobile good luck. Not too likely, unless you go 'external' through a repeater. In that case, it's strictly a repeater coverage issue. With 45W, you'd be on the 'strong side' of the statement that 'If you can hear it, you can work it' with most repeaters.

Mobile to mobile is going to be degraded by the terain, and as flat as it looks, it just ain't. Buildings and slight variances in terrain are going to get you as well. 30 miles, well, maybe, IF it were really 'flat' and IF you had fairly unobstructed path...

But if you have a repeater, over 'relatively' flat terrain, just getting

100' in the air and 30 miles is easy. That's FROM the repeater. I couldn't run mobile to mobile from my home about 15 mi north of Ft Worth to even downtown Ft Worth, but had no problem at all running the same distace from my car to a friends house with the antenna first 40' then later over 60' in the air. We made our own repeater and routinely worked through it with 1W from 15 miles away using our HTs. But his 'base' was 60'+ in the air. (This was both 2M and 220.)

Mike

What do you mean "Going to the trouble"? There is no trouble
getting at least the beginners license.   If doing a little work,
and I do mean little, then it really didn't mean much to you and you
should really look at getting NEXTEL radios.

David

P.S.------

In another era, I was on a ship that worked aircraft out, beyond radar
range....say  250 miles, on  243 Mc....day in and day out...RUNNING  from  8
to 12  Watts!

The propagational path loss is truly trivial at VHF/UHF...BUT  the Terrain
loss, due to the obstacles the others mention is a HARD fact.

Get the "ticket", get on air, and suprize yourself....      "DM"

Matt,
The last thing that most hams want to do is discourage you away from ham radio.
I'm sorry that
you received nasty e-mails. The 30 mile range is testing the limit- if you have flat terrain, decent rigs,
and resonant antennas, you stand a good chance for communication.
If you are in a noisy, hilly environment, you may have a problem without the use of a local repeater.
In my area of NJ, it is difficult to support a direct 30 mile range with mobile setups.
Local amateur radio clubs can help you study for the test and get you set up.
Good luck.
Al

Mathew,

I agree with AL. But just remember, he said 'most HAMs'. HAM radio
is nothing more than a cross section of society. In some cases, there
are a higher percentage of certain types of people, but basically you
get all types. Including those that will assume the worst and be
idiots.

But there will also be a lot of people who WILL welcome you and
smooth your path if you decide to get that ticket.

Just as there are "*" in society, there will be "*" in HAM radio.

Mike

Hmm, invest in the Gordon West no-code book first. Take it home, do some studying. Then call
around and find out when the next VEC testing is in your area. Then go take the test, pass it, and get
you license from the FCC. Then I'm sure you'll have no problem communicating.

Of course it is, if 2 meters don't work, try another band.

Matthew,

You've started quite a conversation here and most of it looks very informative. One of the first replies talked about getting your no-code tech license from your local amateur radio club and that's very sound advice. As well is the advice on the 2 meter mobile you were interested in. I own one HTX-242 and also it's earlier version the HTX-212. Both are fine radios.

Also mentioned earlier were repeaters and a great discussion followed. I don't know if anyone took the time to explain what a repeater is but basically, it's one of these building top or mountain top locations that has a radio that recieves your signal and repeats it using a better antenna than your mobile and also a lot more wattage usually. They are mostly run on duplex which means your radio transmits on one frequency and recieves on another.. You don't have to worry about all that once you put the frequencies into memory.. It's all fairly easy and is explained in the manuals from Radio Shack.

I myself have worked a repeater from 65 miles away with my 5 watt handheld plugged into a simple magnetic mount antenna on the roof of my truck. Now let me give a little more info on that repeater I worked. It's part of the repeater network here in interior Alaska that covers over 60,000 square miles. Most of that area is primarily occupied by Moose and Bears but, it's nice to know that if you happen to ride out there on a snowmachine or 4 wheeler, you can always get help if you need it. Here's an address you can look at to see what kind of coverage a really good repeater network has.

http://www.admin.uaf.edu/aarc/AARCrptmap.html

Most of our repeaters are linked together so that I've been able to talk over 300 miles with just my mobile radio and a magnetic mount antenna. It all depends on your local club and the cooperation they might have with other clubs. The network we currently have is sponsored primarily from our club with some help from our parent club in Anchorage.

Another nice feature with a lot of repeaters is the ability to do what is called an autopatch. This allows you to make non-business related calls thru your radio and the repeater. Great for telling your friend to turn on his radio or to call the missus and see if she needs you to get eggs or to call a tow truck when you're stuck.

Well, hopefully I was able to shed a little light on this subject and not totally confuse you. If you have any questions, don't hesitate to ask.

Hi John,
I have exactly the same problem as you. I've stored my radio for a couple of years (2 or 3) and now the keyboard doesn't work. I ear squelch but I cannot choose any frequency and enter anything. The only thing I see is memory 36.
I think that the thing to do is to make a reset of the CPU but I don't know how. And I don't have my manual in which this is probably explained.

If you find how to do this, please let me know.

Hold down the "M" key and power the radio up. That will reset it.

Certainly 80 meters all banging against the end stop at once would make a fair
racket.

Does anyone have a datafile or specsheet on the NE602 mixer IC? I am working on a couple of projects where the 602 would work great, I just need a bit more info.

If you can lend a hand..Thanks!

Every semiconductor manufacturer has had all this stuff on line for
ages.

Yea, I already thought of that. However the NE602 is NOT a Phillips manufactured chip. Therefore they only have a collection of application notes. They do not have a complete specsheet on the device.

Yes it it. Signetics has been owed by Philips since the early 1970's.
Back in the late '80s, they dumped their various regional names

(Signetics, Mullard, Valvo, ...) in favor of the worldwide use of Philips.

>Therefore they only have a collection of application
>notes. They do not have a complete specsheet on the device.

Try looking under the extended temperature range number, SA602, I think.

A point, I think, everyone has failed to note here is the purpose of the communications. If Matthew is looking for any type of business communications, he needs to use business band or CB (class A on 450 MHz thru a repeater would work great). If he only want to keep in touch with his friend, ham radio is great, providing they both have licenses.

Tom

It is possible to find the datasheet for the NE602 at Philips - they are
just naming it SA602.

   http://www.semiconductors.com/pip/NE602AD

Looks like a spec sheet to me.

The "Order now" links are often amusing - you can buy as many as
you like, as long as you buy them 550 at a time. :-)

Phillips has dropped the NE602 in favor of the SA602A, which is an
industrial-grade version of exactly the same thing. Take a look at
www.semiconductors.com/handbook/chapter_221.html.

Are you quibbling about the use of the name by Signetics Korea, a spun
off company that operates as a subcontrator for packaging and testing ICs,
or that 1975 is to be considered mid rather than "early 1970's"?

But I have real 2 meter conversations of lids being gross and profane.

Here are some of the neet subjects talked about.

burning houses
machine guns
kicking ass
pissant punks
rotton radio oficers
needing the malitia to stop a radio war

```
and it just gets better

Come hear them all. You will laugh, and want to share them with all your
 friends as good ham radio protocal.

http://www.pittnet.com/claude/hamradio/ABufu.zip

Enjoy!!!

Radio Oger

The web site gave me the impression that Philips sold Signetics to Keo Pyung Group.

Hi,

could anyone help me please in getting the valves for a WW-II BC 375 set:

I need
4 valves of type VT 4-C (also known as type 211), and
1 valve of type VT 25   (also known as type 210).

The VT 4-C is a triode (10 volts at 3,75 A, resp. 1250 volts), the VT 25 is also a triode, used as microphone amplifier.

I figure that now would be as good a time as any to start studying for that General license exam.

I went out to the web sites that Larry W$CSC recommended and took the practice tests, I can pass the Tech tests most of the time on the stength of my ET background in the electronics and communications theory subelements.

With some common sense and elimination I can do reasonably well in the other subelements, but the rules / procedures / practices are where I loose the most points. I could use a little study in antennas and feedlines and also in RF saftey and a review of the more esoteric aspects of signal propigation as well.

I took the General test several times and never did pass it, though I came pretty close a couple of times.

So what I'm looking for is a recommendation for study materials. I'm not much into memorizeing the questions and answers, I'd rather learn the subject beyond the exam questions, and have it down cold before I take the test.
If the study materials contained something for code practice,

that'd be good too.

I don't think I want any computer based traing, I spend too
much time in front of the tube as it is; however, if
someone has used a CBT course that they think can't be beat
I'd like to hear about it.

Thanks, Brandon Mayfield

Go to any Radio Shack. They have the books!

You can also buy study materials from the ARRL (www.arrl.org).

Hope to see you on the band....(c;

Does IBM really run Purgatory?? Is Purgatory in Austin?? I'll tell
the Monsignor....(c;

I ordered the ARRL books for novice/tech and general. They should give me enough to pass the revised exams after 15 Apr, and enough to be dangerous. I can always practice on the web pages.

Good advise follows:

Don't try to learn any electronics. Don't try to memorize all this
nonsense you'll never use. Don't approach the test as an engineer.
An engineer had nothing to do with its questions and would be insulted
if you thought so.

Rote memorize the questions and their correct answers. That's what
makes the qrz.com practice tests so important. Those are the REAL
QUESTIONS to the REAL TESTS! If you can memorize those
question/answer combinations, you get your license(s).

EVERY ham REALLY needs to have MEMORIZED that you have to notify the
FCC 27 months before you expect to launch your own ham radio satellite
with the Army Surplus ICBM from the cow pasture out back of the
barn.....stupid question on the EXTRA test from a stupid questioner.
How dumb.....

Larry....If a ham has a question about VE or Satellite launch,
couldn't he LOOK IT UP, instead of having to memorize it?? Duhhh.....

Brandon, if you've already tried and failed to pass the General test,
the only solution is to cram the answers. The ARRL had booklets for each
class, with all the quesitons and answers. If you cram that, you're
bound to succeed. For the code, I'd suggest "Supermorse"; you can
download it from the Net. An excellent program where you can vary the
speed to adapt to your own pace; you don't have to look at the screen,
just listen to the sounds and write down the letters. The downside is
that the code is so crisp and clear on the program that you'll be thrown
off by the crappy sound of the casssettes they use at the VEC
sessions....:-)

I find this quite incredible.

The whole point behind Amateur Radio is to further the research and practice of communications
electronics and theory. If it's just to get a ticket to chat with other people, then there's no
point in Amateur Radio at all, just a cynical exercise in getting the advantages of such a noble
hobby without the obligations or responsibilities.

Ray

Lessee... I work emergencies, public service communications, VHF nets,
HF nets, organizing and teaching ham classes, organizing and running
local VE testing, helping at the 7th call area QSL incoming Bureau,
doing interference tracking and control, as well as contesting, DXing,
phone patches, emergency communications into disaster sites, and scoring
the occassional newspaper article for the hobby.

Oh no... I don't do anything to promote or support the hobby, now do I?

I feel I have put enough into this hobby to allow me to stand in defense
of what I believe in, and if you do not like it well I guess that is
just too damn bad, now ain't it?

I have not been on 11m since 1974... but surely you are well acquianted
with it recently, Cecil.

Moi? CBer? And why, pray tell, would a CBer be staunchly defending ham
radio quality against the lowclass whiners such as yourself?

But you just cannot deal with reality, and are clearly losing it, as
proven by this incoherent rant, Cecil.

And btw... what is it about April 15, 2000 and linear time that you just can't seem to grok?

Closed? One word. Reconsideration. Nuff said.

And since you and your pathetic ilk did not take the FCC as immutable gospel before, why should I now?

Try and wrap your little pea brain around that one, if you can.

ROTFLU!

No problem, Neil. I have been up to 25wpm before. One month ago I was
at 18wpm. Now I am back to 20wpm. I'll pass the 20wpm code exam on
Feb. 26, no sweat.

Why should I try to do that, Neal? I'm just having fun. Have you
proved that you are not a rapist yet?

> And poor little Cecil just cannot seem to deal with it... poor baby.

Strange thing for you to say to someone who already had four
years of graduate engineering experience when you were still
$hitting all over yourself.

Sorry, nitwit, but I proved no such thing, and neither have you. There are also equivalencies in other languages to most words in English... so I guess french is just a 'coding system', huh?

Also all computer languages are 'coding systems' too... in fact all languages of any kind are merely 'coding systems' to convey ideas... which is what cw does as well.

You just cannot get your mind around that you have lost on every point, Cecil. What a delusional loser you have conclusively proven yourself to be.

ROTFLU!

If that were so and you had been doing so for 49 years, then it is
pretty clear you would have no trouble passing 20 wpm Cecil. Since you
are so clearly part of the lazy whiner contingent that is clearly not
the case.

Your lies are proven as such, Cecil.

It is either repetition or it is not, Cecil.

My do you desperately attempt to squirm around rather than admit you
have so clearly and conclusively been proven WRONG, huh Cecil?

> Please describe how you use CW without memorizing the code/character
> translation.

Please describe how you use ANY language without memorizing the
code/character translation, Cecil.

> Do you develop Morse code from first principles every time
> you use it.

Do you recreate language every time you flap your gums, Cecil?

> You seem not to know anything about Morse code.

I know quite a bit more about morse code than you do, Cecil...that much
is abundantly clear. It is you who know nothing about what you
desperately wish you could speak authoritatively about.

ROTFLU!

> I suspect a CBer on the troll.

Again Cecil proves himself to be nothing but a delusional and factless
twit.

> > It is the same as your french teacher telling you not to
> > translate/convert but to actually think in the language naturally.
>
> Ah, but nobody thinks in Morse code.

Nobody? How do you know, Cecil? And I can read a sign and 'think' it
in morse without translation.

Can't you?

ROTFLU!

You really are a CBer, aren't you?
> --
> 73, Cecil, W6RCA   http://www.mindspring.com/~w6rca

Nope, but you surely seem to be of their ilk, Cecil.

Not as legitimate... the sending tests were removed for legitimate
reason. An arthritic, or someone with palsy, etc, would be unable to do
so... so long as you allowed the keying means they needed to utilize,
there should not be much of a problem... it is the receiving that is
what counts.

You are in pain?  A pain I understood, but was unaware you were in pain.

Poor pitiful little Cecil.

What you consider 'obvious' is pure idiocy for the rest of the world, Cecil.

And I post a name... thanatos999. You do not like it, deal with it. I am not required to post more.

I have a call... and it is far superior to yours and I have posted it already several times in this thread.

And you have not disproven or discredited a single thing I have said, Cecil while I have pointed out your dishonor, dishonesty, whiny lazy nature as well as your idiocy, foolishness and delusional status clearly and conclusively.

And poor little Cecil just cannot seem to deal with it... poor baby.

ROTFLU!

Hate messages? Hardly. It is the lazy whiners who spew the hate.

And as for writing computer programs capable of being used to post to
ngs, I have done so... haven't you?

> Get a life,

Have one, thanks. And at least I earn my way through it... I do not
lay about lazily whining for everything I want like some participants in
this ng I could name...

> CB is what you act like, not a test you pass.

Actually it is a cesspool of a band... something the whiners will turn
Amateur Radio into.

I have been 100% on the money will every one of my other assessments.
There is no reason to believe I am not right in this one as well.

Especially with Cecil providing such a model example.

It is *not* a language, it is a coding scheme, like ASCII, memorising CW codes from ham radio has about the same relevance as memorising ASCII has for computer operators. I'm an old timer in computer programming, when I studied it I had to enter a program on the front panel switches of a PDP-11, it made some sense then, but it would be silly to have that as a requirement now.

Ham radio must change, the internet is available, free in many places, it does not require a license, you can talk to people around the world. Most hams today don't want to listen to cw, so even with thousands of new American Extras, you'll still have those cw bands to yourself, but don't stand in the way of those who want to try other, more cutting edge modes!

You can only understand Morse if the sender and you speak the same language. If I send you unaccented French in Morse and you don't speak French you're not going to understand it.

Not to belittle CW or what you said, but I use common CW abbreviations
while carrying on foreign PACTOR QSOs. They can be a useful part

of any digital mode QSO, including CW.

Hmmm . . .I wonder if the idea of a doctor's waiver on the code test
would ever work? ;)

> so long as you allowed the keying means they needed to utilize,
> there should not be much of a problem... it is the receiving that is
> what counts.

I disagree. It is the COMPREHENSION that counts. If you can read it,
you can send it, and this is an award for people who UNDERSTAND the
code, not just those who can memorize a "song."

Odd that you should say that.

I have had many QSOs with overseas hams who could not speak a word of English nor I speak a word of Russian, French, German, or whatever. BUT, we could carry on a satisfactory conversation about an admittedly limited but useful set of topics using common CW abbreviations, etc.

It is a mistake to confuse Morse and CW - they are not the same by any means.

I guess you have never heard of Q-Signals, eh?

With those I have managed to have reasonable QSOs with ops who I could
never have communicated with at all by voice.

And therefore since you claim we can have the same QSOs in cw that you can with PACTOR why not just save all the extra BS involved with PACTOR and just do cw and chuck the PACTOR mode, huh Cecil?

You just cannot seem to wrap your pitiful little mind around the concept that not everyone prostrates themselves before the Great God PACTOR as you do.

Personally I can just email someone in almost any language and just use one of many conversion programs. Far from perfect but they generally get the basic concepts across.

So why bother with PACTOR huh Cecil?

Why would such be needed? The concept is if you can receive 20wpm you
understand the code and can send.

Just being able to send is no measure of if you can receive.

And there should be no waivers.

> > so long as you allowed the keying means they needed to utilize,

If you can receive, and are not a braindead moron, you can comprehend.

> If you can read it,
> you can send it, and this is an award for people who UNDERSTAND the

Of course, but receiving a QSO at 20 wpm when you do not know what the
QSO is is a comprehension test, not a memorizing of a song.

> You call your wienee call superior? BWWWWHHHHAAHHHAHAHHHHHAAA

Quite. I have yet to see DX stations send QSLs unsolicited from a US ham with a W6 call, Cecil.

A WR7 on the other hand... well, I have received massive numbers of SASEs from DX stations AND US hams.

Considering there are just about 25 other hams with the prefix, and some of those are not particularly active.

And then again, my 2x1 is superior to yours, Cecil, because I am an Extra and you are not.

Deal with it.

And no matter what you do, Cecil, I was an Extra 12 yrs ago... you will not, barring a time machine, be able to alter that no matter what you do.

> > And you have not disproven or discredited a single thing I have said,

> Why should I try to do that, Neal?

I agree... it is difficult to disprove the truth.

> I'm just having fun.

If you consider being proven conclusively to be a lying, lazy, idiotic
delusional fool, then more power to you, Cecil.

> Have you proved that you are not a rapist yet?

Where do I have any burden to do so, Cecil? I have not claimed I am not
one... you are the one claiming I am, by implication if nothing else.
The burden of proof is on you.

However the statement was that you are an idiot for claiming that you
cannot prove A negative... not ANY or ALL negatives.

And since I have proven several negatives you are clearly and
conclusively disproven.

> > And poor little Cecil just cannot seem to deal with it... poor baby.
>
> Strange thing for you to say to someone who already had four
> years of graduate engineering experience when you were still
> $hitting all over yourself.

Irrelevant, Cecil. For all your 'graduate engineering experience' you
certainly did not seem to do much with it. How do you explain that I
have been an Extra for 12 yrs and you are... well, you are Cecil... need
I say more?

Methinks you are engaging in psychological projection. You are
the one who's whining about the changes in the Morse code
requirement. I'm happy with the changes with no need to whine.

Because most of my friends are on PACTOR, Neal. Guys like you won't talk to me on CW. I use a straight key at 10wpm. Real CW operators use straight keys. What? You use a ***DIGITAL*** electronic keyer? You use the electronic logic system that you absolutely hate? Go figure.

> You just cannot seem to wrap your pitiful little mind around the concept
> that not everyone prostrates themselves before the Great God PACTOR as
> you do.

I do not advocate using threat of force from the feds to promote PACTOR, Neal, but that is exactly what you do for Morse code. I believe in live and let live. You obviously do not. What kind of balls does it take to try to control my choice of modes? If you want to do CW, then do it. I will do whatever modes I choose to do or none at all, thank you.

> Personally I can just email someone in almost any language and just use
> one of many conversion programs. Far from perfect but they generally
> get the basic concepts across.
>
> So why bother with PACTOR huh Cecil?

When the big emergency happens, telephone lines are down, and internet connections are severed, I'll be able to contact PACTOR II stations that I can't even hear on CW and transfer more information without an error than I ever could on CW.

Sorry, Cecil, but I am not whining.  I have nothing to whine about.  I
already have my Extra.  You do not.

I am merely exercising my first amendment guaranteed free speech rights
to state my opposition to the actions of the government toadies and my
reasons for such opposition.

You are not required to like what I say or to agree with what I say,
Cecil.

I am not forcing you to do anything.

So what, again, I ask... is your problem, Cecil?

Projecting?  You should know all about that now, shouldn't you Cecil?

ROTFLU!

Yeah, I suppose you can get name and location type of equipment and the size of your antenna, but is that all hams want to talk about, the size of your antenna?

> and YOUR friends get your mode, and me and mine not ours, hmmmm?

You can have your mode, Neal. Just don't try to force it on all hams.
You do your mode and I will do mine. What is wrong with live and let
live?

> I use an iambic paddle.

Which requires that same hated digital logic that exists in TNCs.

> Where is anyone having a gun held to their head to use CW, Cecil?

Not to use it, Neal, to learn it. The feds use the threat of force
to compel all HF hams to learn Morse code.

> Deal with it, Cecil.

Already did, Neal, ten years before you were born.

> Are you going to claim that such a situation or circumstance is
> absolutely impossible, Cecil?

Nope, just so improbable that I would be better off storing food
and water than owning a CW-only rig.

And none of mine are... they are all on CW, Cecil. So why should you and YOUR friends get your mode, and me and mine not ours, hmmmm?

You just do not get it, do you, Cecil?

> Guys like you won't talk

> logic system that you absolutely hate? Go figure.

I use an iambic paddle. I do not use a TNC, Cecil. I can also use a straight key but send better with the iambic paddle.

And as soon as you are elected god of the universe I will give a rat's red rump about what you think.

> > You just cannot seem to wrap your pitiful little mind around the concept
> > that not everyone prostrates themselves before the Great God PACTOR as
> > you do.

Where is anyone having a gun held to their head to use CW, Cecil?

Your statements get more and more moronic and delusional every day.

> I believe in live and let live.

They hell you do, Cecil. You are clearly lying again.

> You obviously do not.

Sure I do... I do not force you to use CW any more than anyone forces me to use PACTOR. However I had to learn how to effectively use PACTOR to get my license, and you should have to learn how to use CW to get yours. No one is forcing you or I to use those modes.

And learning how to use CW effectively requires the code proficiency test. Just like learning how to use PACTOR effectively required the part of the theory test.

Deal with it, Cecil.

> What kind of balls does it take to try to control my choice of modes?

My what a delusional paranoid you are proving yourself to be, Cecil.
You seem to think there are jackbooted gun toting CW Police around every
corner, under every rock and in every tree out there just to force YOU,
Cecil, to use CW.

You know, Cecil, you really should take your medications...

> If you want to do CW, then do it.
> I will do whatever modes I choose to do or none at all, thank you.

I have never mandated or tried to mandate anything else, Cecil. Where
have I ever forced you to utilize CW in your daily operations?

However you should have the skill to USE it, just like I should have the
skill to USE PACTOR. (Though once it is set up a trained CHIMP could
use PACTOR... one of the Appliance Operator modes).

> > Personally I can just email someone in almost any language and just

Assuming, of course, the computers are all running, the TNCs are all
functioning, the higher priced and more complex rigs are having no
problems at all, etc etc etc.

And in the situation where you do not have each and every piece
necessary for your pactor spiderweb of technology and only have the
means of communicating via CW or not at all, you will remain utterly
useless.

As usual.

Are you going to claim that such a situation or circumstance is
absolutely impossibly, Cecil?

Are you really *that* moronic?

Some guys think that mast size is directly proportional to . . .

However, I somehow doubt that too many ladies would be impressed if they
found out that a guy's "mast" diameter was 1/40 of its length.

The concept is not always the fact.

Yep. Which is an entirely different animal than the canned FCC exams.
There aren't that many tests, and there aren't that many questions on
the test. When you recognize which test you have, then it is simply a
matter or remembering what is ON that test.

This was a popular method of passing the Extra not too long ago.

You can only understand Morse if the sender and you speak the same
language. If I send you unaccented French in Morse and you don't speak
French you're not going to understand it.

I thought, that's where the Q Codes / abbreviations
and the like, come into the game.?????

Ham radio and internet are entirely different functions. Exactly how
are you going to reach 1000 hams at the same time world-wide on ham
radio? If you were making that exact statement over ham radio right
now, odds are infinitesimal that I would hear you.

220 is such a fun band. I don't know if it's the chicken or the egg that
did it! (cost of radios, or, lack of use!)
In some instances, I think it's better than 2 meter fm.
It's a shame. :(

Hi,

the real reason is that only in the USA and in no other country this band
exists and because of this there are only a few hams who needs a equipment
for this band, and because of the low number of hams who needs this, the
industry do not develop these transceivers.

And be prepared to pay dearly as the "professionals" charge an arm and a leg. Maybe get on a local repeater and find someone willing to help.

When going through the roof of a new van I would prefer to pay the arm and
the leg for quality work and the guarantee (of no leaks ) that goes with it.

Well, I have drilled holes in the last 5 new cars I have purchased, the most
recent being the roof of a 1999 Astro Van,  and the best time to do it is
the day you buy the car.  It is usually when you are the most cautious!  LOL

Actually, I would never recommend trying it alone on a new vehicle unless
you have tried it a few times on an older vehicle first. Also, I bought a
3/4" chassis punch just for the NMO mount antennas I usually mount. I would
never try to put an antenna in just using a drill to get to the required
size.

Sorry to say the demand isn't there. 220 is a neat band, but for some reason nobody in my area (Pittsburgh) uses it. Hell, these chumps don't even want to try 440!!! Sad, very sad.....

Here in the UK it's a bit like that with 70MHZ, gear is few and far between. The one rig with 4M off the shelf is the Yaesu FT-847. All others use transverters. Someone might think to design a transverter for 2M input and 220MHZ output.

Hi.

I'm after some advice, I'm looking to reduce the size of my shack (the XYL is getting a bit fed up and it will be cheaper to replace the rig!!). Anyway I'm down to either the Icom IC-706 IIG or the Yaesu FT-100.

I'd appreciate any comments on either rig.

73's and all the best for 2000.

David Cripps

I have problems with my HF vertical. I am using a Butternut HF-9VX, and my SWR is very high on 20, 17, 15, 12, and 10 meters. I have a ground rod down and radials down, but it the SWR is up at infinite. What could be the problem?

Mark

Bad connectors

Connectors not installed correctly

Bad coax

Wrong coax

Antenna parts corroded

Poor installation location

Ground ineffective

Matching system fried/defective

etc. etc.

I'm in no way a sky hook expert - but those are the places I'd start with

Good luck!

Ask yourself if you really have a problem. How does your antenna
perform on receive and transmit relative to other antennas within your
experience ? Or anybody else's antennas ?

Just because you are not happy with your SWR meter readings does not
mean very much.

Check out the URL below. It is a FT-847 BBS but there have been a fair number of people posting questions about the FT-100. Good place to get some honest feedback about the 100.

http://www.en.com/users/rayd/ft-847/wwwboard/wwwboard.html

http://www.wm7d.net/hamradio/ft100/ (a little out of date but worth checking out)

For the IC-706MKIIG check out the message board below. You will need to follow the Icom/ic706 links at the top of the page. Extremely good source of info and comments on the Icom rig.

http://www.vartel.com/discussiongroups.htm

http://www.halcyon.com/amreg/ (rig control software)

I would also read the reviews in QST for both rigs. If you have a current ARRL membership you can down load both reviews from the ARRL members only web site. QST had some interesting things to say about the FT-100 that you may want to know about. Also the now discontinued magazine, CQ-VHF, also did a review of both rigs, a few months ago, that may interest you too.

Myself, after reading the reviews, news group posts etc. I elected to get the Icom rig over the FT-100. When the FT-100 first came out both the 100 and the MKIIG were priced within $50 of each other. Now Yaesu has dropped the price so you can pick one up for around $1100 whereas Icom has not dropped their price. The question is why does Yaesu feel the need to undercut Icom's price by a couple of hundred dollars? When I went shopping for my rig I found out that more MKIIG's were being sold that 100's. I wonder why since the 100 is cheaper.

Hi David,

At the risk of repeating some comments in another recent thread, the
receiver in the 706 is sensitive, however on a band with lots of
strong signals, such as 40m, it does not perform quite as well as a
rig designed for base station use. But you have to balance this
against the size and capabilities of the set. I have a 706 (early
model), but I've decided to keep the main hf rig (Yaesu) for use in
the shack.

Seasons greetings, Chris

Howdy Mark.....I'd also like to know what you see for VSWR on the lower frequency bands, however, assuming that they might be bad as well, I'd suggest eliminating the feedline first......disconnect from the antenna, check for basic continuity end-to-end (use low ohms position of your meter....or at least a dc test light).....next check for a short or relatively low resistance path across the feedline (use high ohms position here and progressively go lower - keep your fingers OFF of the probes!). These previous tests are done with both ends of the feedline disconnected at the same time of course. If it looks ok with this simple sort of testing, then terminate the antenna end with a known-good dummy load and retest using your transmitter (low power) and VSWR meter or a through line type of wattmeter if you have one available. The wattmeter can be used at both ends in order that you might show up some major loss in the feedline (use the dummy load for this). If this STILL shows high then you have to decide whether its the feedline (coax) itself or a connector you've maybe put on OR...whether its a problem with the VSWR meter you're using (try a substitute unit if there's any doubt OR if using a wattmeter looks GOOD but the VSWR looks BAD). IF all this checks out, then its time for a good physical inspection of the antenna and installation and reviewing any notes regarding the history of the antenna and its installation (DID it WORK at any point....if it did then something failed.....DID it WORK at a previous installation? Was there any point in the installation that you felt you may have overrotated a joint or stressed a trap etc etc....being honest here might save you a pile of time).

Lastly a note on the installation, really without knowing how you've set up your radials etc.....DO NOT put your vertical up right next to your house (strapped onto it etc). Worse still, would be close placement to a metal sided building etc - I remember the grief I had, as a youngster, trying to get a much-heralded GOTHAM VERTICAL to "work" (Anyone remember THOSE heheh).

The key was that you said it was off the wall on the bands. Sounds like
the problem is in the feed line going to the antenna. Check for a short.
For what it's worth, I have a vertical next to the house for space
reasons and have worked 306 countries on it with good swr.

I had one of those antennae.

I found that the gap between the first and second sections (the one that has a solid tube plastic-like insulator) seemed to get black with dust etc. Cleaning it brought the SWR back.

Also, when I had first assembled it, the factory drilled holes were *NOT* in the right position. Measure everything again, step by step.
It's a very good antenna so it's worth persisting.
I left mine down when, after a storm, the mounting brackets had worked their way loose and allowed the antenna to fall, thankfully not on the neighbours kids!

�The antenna is designed to sway through about 60 degrees in high wind, and it puts a lot of stress on the mounting system
�

Best of luck

Mark,

Go to www.ac6v.com and look for logging programs.
IMHO the 3 best Windoes based ones are DXBase2000,
DX4WIN, and Logger (which is free). However
LogEQF is also very popular.

Larry Benko, W0QE

log-eqf.com   or might be logeqf.com you can find a link a AC6Vs sites,
you should have all AC6Vs sites bookmaarked anyway-best site by far of
all the sites and log-eqf is just about the best logging program out
there. It is worth far more than he charges. I got the rig control
from eqf also.

I'm looking for any mods for a KLM Echo 70cm 432 Transceiver. A friend of my fathers gave it to me years ago and I just now got it all tuned up and working but the receiver isn't very sensitive and it also chirps when transmitting cw. I'm missing the manuals and schematics well so if anyone knows of where i can get them or can copy them and send a copy to me i'd appreciate it.

Thanks,
Dave Erickson

I did essentially the same thing - and the little holder came from the
local RadioShack, HI!
Just be careful re-assembling the critter, the holder thingy is a bit
larger.....

Before the
Federal Communications Commission
Washington, D.C. 20554

In the Matter of)   WT Docket No. 98-143
)
1998 Biennial Regulatory Review --)   RM-9148

Amendment of Part 97 of the Commission's   )   RM-9150
Amateur Service Rules.   )   RM-9196
)

If anyone has read this the LCD (non)thinkers get their way again.

First it was the 'no-code' license... "That will be enough" they said.
I knew that was BS... and history has proven me right.

The it was the much abused 'disability waiver' which I said long ago would cause rampant fraud and undermine the amateur radio service... few believed me and even though I am disabled I was attacked as someone who bashed those with disabilities.

Again, history proved me 100% correct.

Now we have the near final CB-ization of Amateur Radio...

a 5 wpm requirement for Amateur Extra with written exams where the questions and answers are publicly available and easily 90% of those passing the 'exams' (memory tests is more like what they are) will not have any clue as to the actual workings of the theories they are being 'tested' on.

At least the CW tests, while maybe not the most technically proficient, at least could not be fudged in this manner. You had to actually be COMPETENT in cw to pass the 20 wpm test.

Well, that simply reduces the quality even further, and unfortunately I fear that before the end of the next sunspot cycle Amateur Radio as we know it will cease to exist, being replaced with something akin to the sludge pot that is 11 meters.

The whiners who only are interested in the easy route for themselves and the profiteers who only have dollar signs in their eyes seeking to seel ever more radios win, and the hobby loses... again.

Dammit, sometimes I really hate being right.

And I really likes Amateur Radio... I fear I will not be able to say the same soon.

It was enough *at the time* to nudge the ARS out of the dark ages.
In Dec. '99, it was time for another nudge.

> Now we have the near final CB-ization of Amateur Radio...

That's what a lot of hams said when the no-code license was introduced.
It didn't happen. If CB troublemakers haven't flocked to the nocode tech
license, why would they study and pass a 5wpm Morse code requirement?

> At least the CW tests, while maybe not the most technically proficient,
> at least could not be fudged in this manner.

Of course they could. The Morse code was published in advance. They
merely rote-memorized the Morse code characters.

> Well, that simply reduces the quality even further, ...

That's simple to remedy. Simply raise the code requirement to 100wpm
and you'll get so much "quality" that the ARS will disappear for good.

> The whiners who only are interested in the easy route for themselves ...

What about the whiners who want to continue the easy federal subsidy
route for Morse code instead of having to expend some effort promoting
their favorite mode?

Like I said, it is never enough until they have simply turned amateur
radio into the sludge pit that is CB. The end result of the whiner
agenda is an absolute removal of any and all requirements, just like
with CB.

Most types like that look for the HF, not VHF. And I do not know about
you but *I* have noted a distinct decline in the quality of operators I

have been seeing even on the 2m repeaters.

> > At least the CW tests, while maybe not the most technically

Excuse me but that is an idiotic statement. You cannot rote memorize 20
wpm. You either have the skill to receive at 20 wpm or you do not.

Check with most 'extras' after this nonsensical pollution plan is
enacted and you will find they have no clue about the theories they were
'tested' on even just a few months ago.

Quality has been dropped another dozen notches towards the LCD.

> > Well, that simply reduces the quality even further, ...

Nonsensical gibberish... much like everything you have had to say so
far.

What ARE you ranting about? Where did someone get an extra class
license ONLY by passing the cw exam and not also by passing the written?

Where was this waiver for the written exam, Cecil?

I must have missed it.

No, my recollection that the no code license wasn't the first. It was giving 11 meters to the Citizens Band. However none of the events since may have been all bad. Today we have GMRS and FRS, what more could one ask for? Why just the other night my wifes purse woke us up (she forgot to turn the radio off) at 3:22 AM and alerted us to a drug deal in the immediate neighborhood going down! Now this is the kind of excitement one rarely hears on the ham bands :-)

As for scarcity of spectrum space, this is due to poor choice frequency allocations for TV. The VHF and UHF TV channel assignments are a waste. When I get to be King, all TV stations will be reassigned to Ku band satellite, opening up a huge spectrum of terrestrial frequencies in the process.

Excuse me, but the faster the Morse code, the *MORE* rote-memorized
it has to be.

Well, the morals and responsibility of a people tend to follow the ease with which they obtain the luxuries of life and complain even then that it's too difficult, crowded or time-consuming.

We are on that mostly forgotten slippery slope to perdition. Enjoy the trip while you can; it won't last long.

The Morse code was published in advance.

Cecil, if I give you a copy of the Russian alphabet to memorize will you be able to speak, or write, Russian, and take a multiple choice test to prove that you can?

And I would not miss you. There.. we're even... as if that matters worth a
tinker's damn.

Just gotta love these fools... Amateur Radio is being destroyed... anyone who
speaks the truth about it is just told to take a hike. Really puts the
attitudes and agenda of those telling such into perspective quite nicely.

You complain, yet you tell me to sell my equipment? I gave a solution
to those who continually cry and whine about the recent events and I
take it that I hurt your feelings. Not once did I complain in this
post, and you say that! I guess you will just have to keep
entertaining us with your stupid, irrelivant post which are pertaining
to the past. Its over, Why continue to have a temper tantrum about it.

SORRY IF THIS IS AN INAPPROIATE GROUP
We need your help
Starting several days before the September 9th MTV music awards at

Lincoln Center, Manhattan New York City, several hams (Peter, KC2CDC and Nelson KC2CVW) and latter myself, Thomas Tumino, N2YTF thomas@asan.com heard MTV staff on 70CM HAM FREQUENCIES. When confronted in person about this they claimed that had licenses and that we should not be using "their" frequencies.

Myself, Peter and Nelson are filling a complaint with the FCC over the matter but we need any ham in Manhattan (preferably upper west side area around lincoln center, at 5 watts in an urban area you have to be in the area) to tune in to the listed (at the end of this post) simplex FM 70cm frequencies and log the content and tape if possible the communications taking place on theses frequencies, THEN FORWARD THE MATERIAL TO ME, Thomas Tumino, N2YTF thomas@asan.com so that we may send it on to the ARRL and the FCC.

Although the MTV music awards took place on 9/9/99, communications have continued through Saturday, Sept. 10 and are expected to continue through Sunday and possibly Monday as the MTV crew is still packing up their equipment.

Nelson, KC2CVW has taped the conversations going on and
Peter, KC2CDC has logged the communications and even caught first and last names of several MTV staffers. The frequencies have been verified using commercial gear and a scope by Nelson and Peter who live in the area of lincoln center. Again, the MTV crew has been spotted using all of the following 70 cm frequencies:
DO NOT INTENTIONALLY INTERFERE WITH THEM OR USE ANY PROFANITY. Follow all amateur rules. This means not talking to them on the air. WE ARE TRYING TO HEAR AND TAPE THEM.
All frequencies seem to be 5 watt hts so don't expect to here these guys over too wide an area. All freq. in MHz

Most active 438.6
438.9
438.7
439.95
440.1
440.6
438.0
439.1
439.7
440.35
438.45
438.8
438.85
438.5
439.6
438.35
All 16 frequencies of the simplex fm motorola HT 1000s they are using are in the 70cm ham band.

Thanks for your help!
Lets protect our band.

Thomas, N2YTF

I was able to change my address. It took some time because I did not want
to follow directions. But, when I did everything was fine.

Thanks

Boliver

> > For now, applications for club, military recreation, and RACES licenses should be filed on the ''old'' FCC Form 610B. Trustees and custodians of these licenses should not use their personal Social Security Number as the TIN for these applications but should contact ULS Technical Support (202-414-1250) to obtain a FCC-generated identification number for Form 610B.
> >
> > Applications for new licenses or upgrades will continue to be filed through a Volunteer Examiner Coordinator. VECs will use a special NCVEC Form 605--a variation of Form 605--to file with the FCC for test sessions.
> >
> > Starting August 16, hams already registered in the ULS may file applications using the new FCC Form 605 electronically at any time of day, seven days a week. FCC Form 605 will be used for license renewals, modifications, cancellations, application withdrawals and amendments, as well as requests for a vanity call sign, duplicate license, change of address or other clerical license modification. Visit the WTB ULS page, http://www.fcc.gov/wtb/uls and click ''Connecting to ULS'' for information on accessing the ULS system. Accessing the ULS database requires a telephone modem. A toll-free number, 800-844-2784, connects users to the FCC's Wide Area Network.
> >
> > Among other things, the ULS features a renewal reminder sent 90 days prior to a license's expiration date. The ULS also simplifies the process of submitting fees to the FCC. The FCC said it also anticipates that the ULS will be capable of accepting credit card payments on-line ''in the near future.''

For your information, the last time I did an address change was on an Excel spreadsheet that looked exactly like the form 610. It had been approved by the FCC. So it has been done.

As far as the Social Security Number issue, that unfortunately is how you must deal with the government, not just the FCC. If in order to comply with the law concerning a hobby that I enjoy I must reveal something that they already have, so be it.

Thanks

Boliver

Very large lead-acid batteries available. Well used. Free. You pickup, you haul. Located in central Texas area. From old Microwave relay sites. 2 volt cells, most sites had 24 cells. Great for radio/repeater sites, solar cell installations, etc. Give your UPS enough battery to run days, maybe weeks. No chargers available. Must be picked up within the next week or so. Contact:
RSANDALL@Prodigy.net   or
kc4yoq@grits.net

I mailed them a new 610 form MANY WEEKS ago.
No reply yet!

Anyone have an idea how long the turn-around is these days for a simple Change of Address 610 to get processed?

hi guys, dont mail anything to FCC anymore, as in the arrl bulletins, ham radio has been included in the electronic filing system now, and during the transition to the new electronic filing system, suspended responding to all paperwork. Check out the arrl site to find specific instructions on how to file address changes via the electronic (internet) filing. Good luck

I have for sale a 48' (sections) Rohn 25 G Tower. It is in good condition and is on the ground, ready to be picked up. To be sold altogether. Can be installed at 40 ft freestanding (no guys) or at 48 ft with guys. The tower is in Del Rio, Texas, local delivery if needed, Val Verde, Maverick or Kinney County only.

First $125.00 gets it.

Richard

Pedro, My manual shows this error code as the following;
PLL Err - appears if the HTX-212's PLL (phase-locked loop) section malfunctions. If turning the HYX-212 off then back on does no correct this error, take it to your local Radio Shack store to arrange for service. The preceeding text was verbatem per htx-212 manual, cat. no. 19-1125. You may want to try a reset using the following per the manual.
1. Turn of the HTX-212.
2. While holding down F+T-SQL, turn on the HTX-212.
All display elements stay on for about 2 seconds.
(you will lose all stored information and a good reset will "beep" 3 times)

If this does'nt work, you may have to go to Radio shack for help.
Good Luck de KC8COR, Paul, Battle Creek MI

Hello OMs

This week I'm going to London and I don't know where the good ham stuff
is...
I'm swiss and it will be my first time there. Also if anybody knows
ham-shops
or ham-clubs in the area of Kensington please mail me that at:
hb9tia@uska.ch

Thanks and keep hamspiriting...

HB9TIA
Manuel, Switzerland

There you will find loads of projects documented projects including antennas, transmitters, receivers, PSUs and many many usefull circuits. PCB foil patterns are included for many projects and there are even photograph illustrations of the more recent projects.

I have recently included loads of freeware and shareware software packages for PCB drafting in the DOWNLOADS section. All the more recent PCB component layouts and PCB-foils are in BMP format so that everyone can read and print them (they are zipped).

Amongst the more recent projects added to the page are:
- TBA120 NBFM receiver - 100KHz to 100MHz, change two coils & crystal.
- Simple 4-watt AF amplifier - much better than the LM380.
- Extending the Balcony Antenna using Fractal & Meander principles.
- VHF digital direction finding system.

The site is well worth a visit. I hope you have fun - Harry SM0VPO

I have had loads of E-mail because the DOWNLOAD pages frequently give the error message FORBIDDEN when trying to get a ZIPped PCB foil pattern or datasheet from my homepage. Harry's Homebrew Homepage is lcated at:

http://sm0vpo.8m.com/
http://www.geocities.com/SiliconValley/3569/
http://hem2.passagen.se/sm0vpo
http://members.xoom.com/sm0vpo

The Passagen and Xoom sites (for Europe and the far East) have recently added banners to the INDEX file. When you click on another site (example http://sm0vpo.8m.com) then these servers import the files to their own server. Great! it's all free, but if you try to download a PCB foil pattern ZIP file you are accessing the site from an external site! This results in the message FORBIDDEN!!

If you want the PCB foils then copy (Ctrl+C) the URL and paste into the ADDRESS panel of your browser (Ctrl+V) and it will load the original site. You can then download to your hearts content.

I hope you have fun - Harry SM0VPO

I don't have a circuit diagram and beyond the fact that it looks like its in
the psu but not HT I couldn't tell you. The diode looks like a 1N4000 series
but fatter and is a diode not zener, a guy from the USA has emailed some
specs, seems they know it there, but I can't match them up either. It's in a
Matsui set that was sold here, a bit old now though.

It's me <RMAYER@kscable.com> wrote in message

I'm in search for detailed plans for building a 10 meter
transmitter capable of SSB and CW modes with a power output
of, say, 2 to 20 watts. A VFO would be preferable.

I see that Far Circuits (http://www.cl.ais.net/farcir)
supplies pcb's for two articles in 73's mag. The first
is Feb '91 for a 10 meter 'SB' transmitter. And the
other is July '92 for a 10 meter DSB transmitter.

As I don't have access to these back issues of 73's mag.,
I can't evaluate these designs.

I'd be most willing to send you a few bucks in return for you
sending me a copy of the plans.

Oh, no license yet, but very soon. I'm also quite experienced
at electronic construction, including R.F. stuff.

I will be using a Drake R8B for the receiver.

You can contact me via. email at: lawrence@javanet.com

Regards,

Larry Gruber

WTB: I'm looking for a good deal on a used UT-1200. This is the module for
the 1.2 Ghz band. It's used in the Kenwood 741/742 tri-band radios.
Please respond by POST ONLY.

100's of winter projects at Harry's Homebrew Homepage http://sm0vpo.8m.com.

I have done a lot of updating recently and included a 4-watt AF amplifier as well as coil-winding using PCBs so that anyone can wind the same coil! Not an easy task, remember Harry's laws?:

1 - No two people can wind the same inductor with the same instructions and materials.
2 - Coil winding data is a constant that varies from person to person.

Of course, the article is illustrated with photographs of a 20uH inductor (+150pf = 4MHz).

There are loads of antenna projects, transmitters, receivers and even a little booze, if you think "homebrew" has another meaning.

I have my own message board which is in daily use by home constructors with problems or suggestions. If you could help to answer some of the questions there I would be eternally gratefull.

Dont forget to look at the high-powered "bug" (FM Wireless Microphone) that does not need coils wound. Even the FM receiver does not use coil-winding.

Very best regards from Harry - SM0VPO

I have for sale a GE ExecII radio 100 watts out. The radio has been tuned down into the ham band and is presently tuned to 147 MHz and has been modified for 9600 baud packet. It can also be used for 1200 baud packet by changing a few connections, or could also be used as a 2 meter repeater. Radio comes with a partial repro manual, tells how to use for 9600 baud, 1200 baud or how to use as a repeater, and one set of elements. This unit is in excellent condition, I'm getting out of packet, not enough activity in my area - so can't stand to just let it set here. First $150.00 plus $10.00 for shipping gets it. Please respond via email.

Richard

Can anyone give me a identification number for the lithium battery used to back up the memory in an HTX-202. Or does anyone know another source besides Radio Shack for this battery. This is the third one I have to change in six years, and I hate to give Radio Shack another $15.00.

I just installed a 'generic' battery. Something like $3 at RS. I
clipped
off the old battery leads, and soldered right to the new one. I just
picked one that had about the right voltage and encased it in a piece
of heat shrink.

I forget which one I used. I bought my HTX-202 used, and the battery
died about a month after I got it. This was about 4 or 5 years ago
I think. Anyway, That new battery has been in ever since. Not a
single glitch until just last week. And that was when I plugged in this
aftermarket 8-cell AA pack that came with another HTX-202 I had
picked up. Turned out the alkalines in the pack were quite low, and
when I tried to run the radio, it 'glitched' and gave me the dreaded
ER1 message. I had to hard reset to get out of it. So maybe my
internal is getting low... Maybe time for the SECOND swap.

By the way, does ANYONE know where to get more screws that hold
the case together? I suppose I can get more from Maxon, if not RS.
RS list a 'screw kit', but I don't know if that's what I need or not.

I would like info on this radio. I have also posted an add to buy one.
I want to know about modification and if its possible on both the
2.5Watt and 5 Watt models. Also want to know about a numeric touch pad
that a co-worker has on one. Can this be added to a radio or do you
have to buy the radio with it already added. Please email me at
rvkeller@iupui.edu and thanks for taking your time to help me out.
Ryan

I am looking to buy a new or used (good condition and working) Yaesu FT-23R, modified or non-modified. The one a friend has is equiped with a key pad, I would like this feature or info on how I can equip one with a keypad if possible. I found a place to buy one that is 5 watts, but the man said I cannot put a key pad on it. I dunno if he is right or not. Could you please send me any info about this radio. Thanks ryan

I have replaced the lithuim battery with a coin cell holder using a #32
coin type.  Had to run a small twisted wire back to the board.  No
problems.  Now I just change the coin wafer out of a permanenet holder
mounted inside the radio.

Optoelectronics Xplorer Test Receiver Unblocked Version
For Sale:
This baby can scan .05Mhz to 2Ghz In 5SEC!!
It will lock on to any signal determined by the Squalch Meter
It has CTCSS, DTMF, Deviation, CTS and GPS(Optional)
You can lockout and Memorize any Freq.
It has backlighting and Will display Two lines of info plus you can hear the conversation!
This unit has NO GAPS! It has Automatic And VFO so u can fine tune it.
It comes Witth The Following:
The Test Receiver
Telescopic Ant.
800Mhz Ant.
RS-232 Cable & Software To connect to PC
Charger

I've only had it for two month so its in brand new condition
Visit www.optoelectronics.com for Full description
email me at webhoster@home.com or midhack@ureach.com
Price is $700 CAN

On behalf of a national Dutch Red Cross division I have a sales lead to a batch of approx. 20 PMRs. The exact description is:
MX294RAW with CX290 control panel
IF = 21.4MHz, synth. ref. = 5kHz

Keypad
8-digit 7-segment LED readout.
TX 25 watts.
Dashboard mounting.
Original frequency 158MHz.
Some are cradle versions, some standard bracket mounting. Cradles & microphones. All in reasonable to good condition.
Ideal for amateur use using a well-tried conversion at minimum cost.
Frequency readout on display (78 channels 25kHz stepped or 103 channels 12.5kHz stepped).
Conversion document, EPROM and PROM files available. PROM reprogramming possible.

Price NLG 1500 the lot (approx. GBP 475 *check exchange rate*) plus carriage.
Sorry, no one-off sale. Lot stored in the Netherlands.

best regards
Jan, PE1CSI
Philips Vintage PMR Collection

They're fine pieces of kit, albeit rebadged products of the Sangean corporation. Buy 'em on the net from www.purleyradio.co.uk

Original Roberts Radios are even finer, though. But I collect them so I would say that.

Jim

Nick in regard your question about "Roberts radios";
Saw something about these (I think) on < www.purleyradio.co.uk >
Just a suggestion.

I am looking for a program called ISO.COM

It is a DOS based controller program for an AEA IsoLoop IT1 Tuner. I picked the antenna up at an estate sale but the program was not with it. If anybody could help, I would appreciate it. Thanx.

Why are there so few HT's with 220 MHz band???? Wasn't this a band where a couple MHz were taken away because of ham inactivity and a campaign by ARRL to use the 220 band freqs or lose 'em?????? I see a lot of dual band HT's (for example)with 144/430 freqs but no 144/220 HT's. Why is that?

There are a few available - both HT and mobile units.

Is there any 220 activity in your region? It may be your ideal "first HT."

The Standard C288a HT was MY first HT - and I still use it. I researched what was happening in MY region...joined a few amateur radio clubs...and made my HT buying decision after consulting with many others who were doing exactly what I wanted to do with ham radio.

Think about it, you do not find that much mobile or fixed equipment either. Part of the problem is the frequency is not that close to a commercial FM band, so we do not have much good commercial equipment to convert for 220 Mhz Repeaters.

One of the major factors in there being so little 220 gear is that there is
NO 220 band in Japan. Since Japan has 2-3 times as many hams as the US the
big market for 220 gear is not in the country that makes most of the
equipment. And just how many US hams are on 220??? I own a 220 repeater
here and I can tell you that there are less then 6 Hams on 220 in this area.
No manufacturer wants to tool up for that small of a market. Now if we could
convince Japan to open a 220 band we would have all the gear we want!!!!
Maybe we should try to get TEN-TEC/MFJ to make 220 gear....<there is a
Ten-Tec kit for 220>

Since 220 is the first band where Novices have any serious privileges this subject seems to relate to why there are so few novices.   But I can't tell for sure which way it goes.   Does the lack of novices reduce the pool of 220 users or the lack of 220 activity and gear simply discourage people from getting their novice license?

I think the TEN-TEC 220 Mhz kit looks wonderful.   Computer control and most of the features of any modern radio! If my kids had stopped at Novice I would have bought a couple of these. As it is, the greater privileges of Tech lured them on to complete the tech exam. However I do think the TEN-TEC 220 Mhz kit is pricy.   At $295 it didn't compare well to the Yaesu VX-5R that they both wanted so much, so off to the Tech bands they went!

Note that ADI makes a nice 220 mobile rig.   ADI/PRYME makes a 220 handheld,
and Alinco makes another 220 handheld, so they are not non-existant.

For sale:

Icom IC-W32A Dual Band Heanheld.
2 Meter/440 MHz Dual Bander Handheld

Advanced Operations Have Never Been Easier!

"With its five big watts and a plethora of features, the IC-W32A provides just about everything you could possibly need in an H-T. Best of all, perhaps, the IC-W32A makes a serious effort to take some of the pain out of using a small, complex piece of technology" -- QST, July 1997

- Dimensions: 2.25 (W), 5.5 (H), 1.4 (D), 16 oz
- 5 Watts of power @ 13.5 V
- 200 memory channels

- 8 character alphanumeric memory channel identification, keypad entry
- Backlit display and keypad
- ICOM rugged! Meets MIL SPEC C/D/E for shock and vibration
- Handheld to handheld cloning capability (opt. OPC-474 cloning cable) or PC programming capability
- Independent band controls for tuning and volume
- VHF/UHF exchange function allows assignment of VHF/UHF band controls to either knob

More detailed IC-W32A specifications and options.
Modified for MARS capability

I'm looking for a reliable business to install a HAM radio and antenna into my minivan. It would be a bit more complicated than most as the radio controls are in a seperate faceplate and I'd like to mount these up where the sunglass holder would normally go.

Anyone have a reccomendation?

Thanks,

George Rachor

But you could be rare DX. Besides, likely not much to spend money on
there, anyway.

What if it turns out that just down the beach is this beautiful resort.....that's looking for a systems admin starting at $70,000/yr.

hehehehe.....see you in line

And they just happen to have a 150 foot tower with a huge beam, FT-1000DSP,
and a 2 Kw amp they don't know what to do with, from a ham who used to work
there but went silent 2 years ago...

<grin>

I've set up a proposed new design for the http://hamradio-online.com web site.
I've added an online poll to seek your input on the new design - please visit
http://hamradio-online.com and give me your feedback - Thanks!

I'm also proposing to open up sections of this popular web site to volunteer
editors who could own their own sections on special interest topics.

Finally, I've just launched a new, very much improved, online discussion forum
and I'd like to see your feddback on that too. Post your comments on the
Discussion forum at http://hamradio-online.com

Thanks! 73, Ed, KF7VY

The Icom Q7A wins hands down. It has better audio, great sensitivity,
and much better scan perfomance. Plus if you use the programming
software you can listen down into the shortwave frequencies.

Good luck,
Ed

The VX-1R has an alphanumeric display, and it is half the size.
The better radio is the one you like. Buy one of each, then give the one
you don't like to your wife/girlfriend.

13.8V, 8A continuous, 12A peak Nucleonic power supply. Has current meter, overvoltage protection, and foldback current limiting beyond 12A. Output voltage regulated to +- 200 mA for all design loads. Excellent condition cosmetically (It has an attractive brushed copper front panel) and operationally. I'm selling it because these days I spend more time on computers than hamming.

Price: $50 plus shipping (which will not be negligible, since it's well-made, that is to say, heavy. I have no means of measuring its weight accuratedly. I Will ship it parcel post if that's OK with you. If not pick method.

Includes brief manual.

Absolutely right! I've tested both radios and sell VX-1R. Icom is the
best miniradio, keep in your mind about Li-Ion battery cost of VX-1R.
Program software is free from Vlaski Goran. Super RX 0.5MHz-2GHz -
WOW!

Need batteries for:

Yaesu FT-73R--(FNB10 is dead)

ICOM W2A--(all dead)

any help greatly appreciated,

me :)

HAve had both, as well as Standard C-508a,resulting in a certain experience in such matters.... I like the C-508 very well.... nice RX, decent audio (for it's size), and AA battery convenience.... I like the Q7a for all of the above, Plus 30-50 MHz coverage RX (fire depts here are Low band still). I had a VX1-r approximately two weeks....performance was good, nice audio, Lithium Ion batteries work well,but with this size rig,I do like the convienence of picking up spare power at the corner drugstore if you run out in a bind.....the BIG fault with the VX-1 is the inability to scan frequencies at VHF and UHF at the same time, unless they are programmed by

computer...this omission makes the VX1r totally unsuitable for my needs....as you can tell I use my mini ht as a scanner as much as a transciever-the Q7 is ideal for this due to the frequency coverage.... they do act like a wireless Mike in conjunction with a nearby crossband radio....and that works very well... but 300 Mw is only gonna go so far.....
73 and as always, your mileage may vary....

HAve had both, as well as Standard C-508a,resulting in a certain experience in such matters.... I like the C-508 very well.... nice RX, decent audio (for it's size), and AA battery convenience.... I like the Q7a for all of the above, Plus 30-50 MHz coverage RX (fire depts here are Low band still).
I had a VX1-r approximately two weeks....performance was good, nice audio, Lithium Ion batteries work well,but with this size rig,I do like the convienence of picking up spare power at the corner drugstore if you run out in a bind.....the BIG fault with the VX-1 is the inability to scan frequencies at VHF and UHF at the same time, unless they are programmed by computer...this omission makes the VX1r totally unsuitable for my needs....as you can tell I use my mini ht as a scanner as much as a transciever-the Q7 is ideal for this due to the frequency coverage.... they do act like a wireless Mike in conjunction with a nearby crossband radio....and that works very well... but 300 Mw is only gonna go so far.....
73 and as always, your mileage may vary....

Honestly-
this message was bounced back to me by my ISP.....showed an error 441-
server error....
I had no idea it was being posted every time......
ISP has been notified of this, as well as other recurrent errors.....

sorry

Bill, N3DDY

Heya,

I picked up a radio shack BTX-123 Business Band 2M radio... the manual =
says
the freq's are limited to 1511.225 to 156.250.  Its a Xtal controlled =
radio.

Would it be possible to add xtals for a 2M ham freq in this radio =
without
making any mods? or is there even a mod available??

Please e-mail the reply!  dylan@newsguyla.com
thanks

You CANNOT miss this deal if you are looking for a UHF/VHF HT!

I have for sale the following items-
An Icom W32A HT: The radio is in MINT/PERFECT condition! It has NO dents, scratches, or other damage and no signs of wear. I have all of the ORIGINAL documentation, including the manual which came with the radio. I have its ORIGINAL box and all the paperwork for it. I purchased it from Ham Radio Outlet in New Castle, Delaware about 1 year ago. I am the ONLY owner of this radio and it was used as a backup radio. The radio has had VERY LITTLE use and the battery has been

charged and discharged only twice. I have performed NO MODS at all on the rig.

That is not all, however!
I am looking to sell with the radio-

An MFJ Dual Band 144/440 MHz Antenna which works well with the radio (model MFJ-1724B). I have the original packaging for the mag-mount antenna and it is in very good condition.

A MAHA Speaker/Mic which also works well with the radio (model MH-800). I have the ORIGINAL packaging for the spkr/mic as well.

An ICOM Power Cable which supplies power to the unit from another power supply or from a car�s electrical system. A cigarette lighter attachment can be added for more portability. This power cable runs the rig AND charges its battery. It is double-fused and in good condition.

A Radio Shack Discone Antenna for outdoor use. The antenna has very wide receive and transmits on 2m and 70cm (440). Please note that I DO NOT have the cable for attachment between the radio and the discone antenna. That would have to be purchased/made separately.

If at all interested, please contact Mark at hr_rig@hotmail.com   I am an individual selling one unit with all of these accessories. I AM NOT a reseller. Please feel free to email any questions, concerns, or requests to that email address as well.

All serious bids will be considered!

Mark - hr_rig@hotmail.com (if telephone works better, please email me here and we can set up a time to talk!)

ps. Of course, the wall charger, rubber duck antenna, and all other accessories which came with the unit are included. I even have the belt clip and wrist strap STILL IN THEIR ORIGINAL, FACTORY SEALED POUCH!!!
Email me soon... hr_rig@hotmail.com

Hi to all @ these newsgroups world-wide.
I am thinking about purchasing a Kenwood THD7 dual band handheld and i want a few opinions from people who have them so i know if i`m making a good choice or not ? What i want to know is how well does it perform from a packet point of view and is the receiver prone to breakthrough from radio pagers on VHF ? Let me know any good points or bad points you know about it and this will decide if i will buy one or not depending on the result of this message. If you know any weblinks to sites which have done honest reviews of this rig let me know.

Please reply to me privately and not to the newsgroup.

73 from John MI0AAZ in Coleraine, Northern Ireland.

I am getting out of the hobby, so no trade offers please.
I live in Dayton, OH for those close by.

For info from Kenwood's web site go to......
http://www.kenwood.net/products/index.cfm?AMA=open&ama_mob=open&radio=TM-742AD&selection=Amateur

My unit is the 742A model (not the 742AD). From what I've been told, the only difference
is the AD comes with a back lit mic.

The price is firm. It is priced at less than 50% of what I paid.
I will pay the UPS shipping to you (US only).

Contact.....   greggw@erinet.com

KENWOOD 742A Tri-Band   MINT CONDITION   (Used as base station)
2m and 440 with 6m, 10m, 220 modules (space for the 1.2 ghz module)
CTCSS Board   Module Expansion Box   MC-85 Powered Desk Mic

http://www.qth.com/   and it's links.
arrl.org   index of old articles.

Dig enough in these and you'll find mods, I did, but haven't done any.
The one for LF coverage was tempting, but too much noise here.

>
> -troubleshooting or problems you managed to solve on your own.

I blew the ts430s driver transistors, and replaced them.
I'd overdriven them while tuning.

Soon the memory battery will cease, and I don't know how to replace
it!!!
 ONly one ts440? not TS430s too, boo ho.

Hi All,
thank you for reading this NON COMMERCIAL message.

I'm looking for info about TS 440 S like follows:

-mods and improvements you have personally experienced or heard about;

-troubleshooting or problems you managed to solve on your own.

All this info will help me to create a web page about ts-440s .
Please help me to make this site as complete as possible.

The site will be free access and the information will NOT be used for commercial porpouses but only for electronic experimentation.

Please, if you have some info, just send me an e-mail to :
dcl@ascu.unian.it.
Just send me a short summary of what you experinced. I'll chech this info and, if what you sent is something new, I'll beg you to send me the complete description of your experince. This procedure avoids to have a lot of articles dealing with the same matter.

Thank you and 73.

I just replaced the lithium battery in my TS-440. This is a CR-2032 3 Volt coin cell and is available in horizontal PC mount configuration from Mouser electronics for $1.43. Actually what I did was to use the slightly larger CR-2450 (available from Wal Mart) and soldered in the matching button cell battery holder. This was a good match to the battery leads extending up out of the CONTROL ckt board. There is a metal shield covering the CONTROL board which allowed sufficient clearance for the CR-2450 and socket. But to be safe, I applied a couple strips of black tape to the shield to guard against accidental shorts to the battery.

The most time consuming portion of the project was simply to find the location of the battery. The service manual didn't address battery replacement. The instruction manual suggests having the battery replaced at a service center. However it did have an unidentified sketch of the battery on page 29 where it discusses installation of the IC-10 interface kit. The procedure to access the battery is given on the same page under 6-3-1. Installation, which explains how to open up the front panel. Replacement is fairly straight forward and afterwards, reset the CPU by pressing A=B along with the POWER ON switch. The rig should then power up on 14.000 MHz.

As a TS-440 owner, I'd be supportive of a site that documents problems and solutions. I do have the service manual but it's written on the assumption one has already attended a course in theory and repair :-(

If someone has a extra manual for the Icom IC-737 that they arent using, or
if someone would copy one for me I of course would pay for the charges. Is
there some company that sells out of print manuals? Please email if you can
assist.

I am needing to file an address change with the FCC. The form on the FCC

website, the last time I looked, is in PDF format. Does anyone know of an
editable format, such as a spreadsheet? It seems I once saw one on
Compuserve, but I no longer have that access.

Any help would be helpful.

Due to the new law, you will have to FIRST register with the FCC surrendering your Social Security number or they will not accept anything from you! No address change, no license upgrade, no forms, nothing, until you first register with the new Universal licensing system.

Besides, if you don't use the PDF file and try to do something with a spreadsheet, it won't look like the form is supposed to, and the government will stick their heads up their asses and refuse to accept any forms that aren't exactly the way they like them.

This is the universal registration of the citizenry that so many sci fi stories have predicted.... Starting with those who 'have' to do business with the government and ending with everyone... Good or bad? I dunno, but you can see that the career politicians and bureaucrats have had their way via the back door... Retinal scans are likely to be required along with the registration in the very near future...

> ARLB051 ULS opens for amateur business August 16
>
> The FCC's Universal Licensing System opens its doors to Amateur
> Radio Monday, August 16. The FCC reported August 13 that the ULS
> would be out of service until then to prepare for implementation.
> Amateurs should wait until the ULS is back on-line August 16 to
> register.
>
> The ULS ushers in an era of electronic, interactive filing and
> handling of Amateur Radio applications and marks a major change in
> the way Amateur Radio applicants will deal with the FCC. It also

> means the demise of the familiar paper FCC Form 610 series in favor of the ''universal'' Form 605--primarily designed for electronic use but also available on paper. Amateurs filing applications with the FCC under the ULS will use Form 605 for all purposes except--at least for now--club station applications.
>
> The FCC began a weeklong ULS phase-in period for the Amateur Service August 8 and has been converting existing Amateur Radio licensing data into the ULS database. Electronic Amateur Radio renewal using FCC Form 900 was scheduled to end August 9. Electronic vanity call sign application using Form 610V was to terminate August 13 at 5:30 PM Eastern Time. Hams should not try to file renewal or vanity applications until the ULS comes up August 16.
>
> Before using the ULS to file an application, renew or modify a license, or apply for a vanity call sign, all amateurs must register. When registering, individuals eligible to hold a Social Security Number must provide this number--which the FCC refers to as a Taxpayer Information Number or TIN. This requirement is a mandate of Congress, not of the FCC. All hams must be registered in the ULS to do business with the FCC.
>
> Applicants use TIN Registration Form 606 for both electronic or manual registration. To register electronically, visit http://www.fcc.gov/wtb/uls/ and click on ''TIN/Call Sign Registration.'' A paper Form 606 is available at http://www.fcc.gov/formpage.html or by calling 800-418-FORM (3676).
>
> Applicants first register their Social Security Number (or TIN), then enter a call sign. Applicants also must specify a password and a personal identifier.
>
> Registrants receive a nine-character Licensee Identification Number. Amateurs may use this number in place of a Social Security Number in future dealings with the FCC.
>
> For now, applications for club, military recreation, and RACES licenses should be filed on the ''old'' FCC Form 610B. Trustees and custodians of these licenses should not use their personal Social Security Number as the TIN for these applications but should contact ULS Technical Support (202-414-1250) to obtain a FCC-generated identification number for Form 610B.
>
> Applications for new licenses or upgrades will continue to be filed through a Volunteer Examiner Coordinator. VECs will use a special NCVEC Form 605--a variation of Form 605--to file with the FCC for test sessions.
>
> Starting August 16, hams already registered in the ULS may file applications using the new FCC Form 605 electronically at any time of day, seven days a week. FCC Form 605 will be used for license renewals, modifications, cancellations, application withdrawals and amendments, as well as requests for a vanity call sign, duplicate

> license, change of address or other clerical license modification.
> Visit the WTB ULS page, http://www.fcc.gov/wtb/uls and click
> ''Connecting to ULS'' for information on accessing the ULS system.
> Accessing the ULS database requires a telephone modem. A toll-free

The EI9GQ homebrew radio page has moved to www.qsl.net/ei9gq

Recent additions include:
A simple VHF CW transmitter.
2M to 10M receive converter.
6M to 30M receive converter.
30W mosfet PA for the 80M SSB rig.
Pre-programmed PIC now available for the iambic keyer.

Hello,

I'm planning on making a small loop antenna for HF, and am looking for a place that sells a 365 pF "broadcast band variable" capacitor. Would you happen to know of a source?

Newsgroups:
alt.alcohol,alt.radio.pirate,aus.radio.amateur.digital,aus.radio.amateur.misc,es.rec.radio.amateur,nl.radio.amateur,rec.ham-radio,rec.radio.amateur,rec.radio.amateur.antenna,rec.radio.amateur.boatanchors

Hi again all,

I have waddled over to the HTML newsgroups and found the users there very helpfull. As a result I have managed to add the promissed radio formulas calculator (under BASIC INFORMATION) at:

http://sm0vpo.8m.com/ Main page
http://www.geocities.com/SiliconValley/3569/ Mirror in the USA
http://hem2.passagen.se/sm0vpo Mirror in Europe
http://members.xoom.com/sm0vpo Mirror in Far-East

So-far I have added calculators for:

Resistors in series /Caps in parallel (bit of a joke here?)
Resistors in parallel / Caps in series
Reactance of Capacitors
Reactance of Inductors
Calculating basic frequency - LC known
Calculating the number of turns on a coil - single layer
Calculating the number of turns on a coil - multi-layer
Evaluating a heatsink (what does this HS in my hand do?)
Calculating heatsinks (how big do I want to have it?)

Soon, I will be adding T/Pi resistive attenuators and VSWR calculators.
I will also be adding calculations involving sugar/SG and potential alcohol content plus boiling point as a measure of alcoholic content.

Best regards from Harry - SM0VPO
=====================
PS
Windows is not the answer - it is the question.
The answer is NO!

Newsgroups: rec.ham-radio,rec.ham-radio.misc,rec.radio.amateur,rec.radio.amateur.antenna,rec.radio.amateur.homebrew,rec.radio.amateur.misc

Contest period is Jun 12-13(2PM east Sat through 11PM east Sun)

The Murgas ARC will be operating limited multi(6m, 2m, 220, 440) during the ARRL June VHF contest using the callsign K3YTL. We will be running all 4 bands on FM, SSB, and CW from our FN11uh location(northeast PA.) The exchange is a simple call and grid square(see http://www.arrl.org/locate/gridinfo.html to find your square if uncertain.)

2 meter FM will start at 5PM Sat on 146.49 MHz and146.55. Both freqs will be operated on at the top of every hour. Dial around since we might be forced to move if band is crowded. We hear lots of people even though you may not. All other FM should be continuous. CALL US ON 52.525, 223.5 AND 446!

SSB/CW activity should be audible all of the time. Just work us. Answer our CQ's.

All of our stations will be connected, so when you work us on one band simply ask for a schedule on a different band and you can score another contact immediately. Simple!

We thank everyone who participates in this wonderful event. Good luck and happy hunting. CQ contest!

Thanks for reading. I hope someone can help us. My brother recently bought a Yaesu FT-1000MP HF rig and he's having a problem trying to calibrate the VFO display so that it's on the right frequency. If I set my VFO to 28.41500 he has to set his to 28.41505 for us to be on frequency with each other. I checked the tone on 10.000mhz and it matches there but can't seem to get it on freq on phone. Any help or suggestions would be greatly appreciated. Please email keith@toolcity.net if you have any comments or suggestions.

73 and good DX,
Keith Reynolds - n3uux

I have an old 8ch Midland 70-336A VHF radio. I was wondering if there was anyway to program the EPROM with a regular EPROM burner??? Can anyone tell me a way to get this radio programmed. I bought it from a guy not in my area so the repeaters in my area are not programmed into the radio. Any help would be appreciated. Thanks. 73's

You folks are talking about the interesting article from ARRL, I gather.

From the article:

WASHINGTON, DC, Jun 17, 1999--The FCC's Riley Hollingsworth, K4ZDH, says the Commission may have to resort to fines to curb the practice of hoarding multiple club station call signs. "The reason we're concerned about this is that we consider it an abuse of our licensing processes," said Hollingsworth, a legal adviser for enforcement in the FCC's Compliance and Information Bureau. "If somebody applies for 30 or 40 licenses over time, it really overloads the staff." Hollingsworth pointed out that the call signs often must be typed in manually.

Earlier this month, a ham listed as the trustee for more than three dozen club station call signs agreed to give up all but one of them.

<clip>

Hollingsworth concedes that the FCC rules do not specify an upper limit to the number of call signs an individual may hold, but says "the underpinning of the rules is common sense." He recommended that multiple call sign holders should seriously consider turning in their excess grants before they hear from the FCC, "because we will be pursuing them."

<clip>

The FCC says the two-year rule applies for those seeking to obtain one of the desirable call signs being yielded or called back by the FCC, and Hollingsworth plans to specify a date of cancellation on each letter to a holder so that it will be clear when the two years are up.

"We're also going let them know they can't reclaim any of these call signs under former call sign holder exceptions to the two-year period," he said. Close relatives also would be unable to claim any of the call signs in the future.

<end>

I do see collecting callsigns from other countries, if indeed you operate them from time-to-time. I, for instance, do plan on doing a dx-pedition sometime in the next five years... I certainly would feel that I earned those calls I hope to obtain. Having those next to my name will be a badge of pride... working from some remote location... (ah, the dream of an adventurer!).

Anyhow, I found this topic to be rather interesting. I'd love to hear a comment or two from some of these "warehousers."

Tonight I was chasing DX and started noticing my VFO was getting a little stiff. It quickly got much worse and now will hardly move at all. Has anyone else ever had this problem with their Yaesu 1000D? Please respond to keith@toolcity.net

Thanks,
Keith - n3uux

Hi,

E810F Siemens and some Mullard for sale. All NOS and NIB. The Siemens are even in sealed boxes. Also E80CC, E80F, E83F, E182CC, E180F/6688, E280F and E282F in stock. Also Telefunken EF 804 NOS, NIB.
Please e-mail me or visit my homepage for details.

Best regards,

Arnold Goksoyr

Hello All
My new paint shop is now operational & I am offering restoration of your
JOHNSON RANGER panel, bezel, & cabinet to better than factory original
finish in original looking Johnson colors including the unique green silk
screening. Materials are the new Dupont paint system (I am doing ONLY
Rangers at this time)
The cost is $250. (+shipping)
Regards
Dee, W4PNT

Be sure and let us all know when you can do Viking II's and Valiants.
There's got to be a gold mine out there on these!!!

Hello again all,

Yes, there has been loads of activity on the homepage. I have recently added an FM narrow-band RX that is about the size of a cigarette packet and has space to add prototype circuits, such as R/C of models, AF amplifier, data decoders, etc. the set is ideal for HF FSK and will work on any frequency up to 100MHz or more. Naturally there is a PCB layout and component overlay to download and the project is well photographed.

Following many requests I have also added info on building an antenna tuner with a few hints on other methods. Forgive me for not taking this subject so seriously, but all the info is accurate, complete with photograph. Do not be put off by chapter titles such as "ADDING KNOBS" but I feel an ATU/ASTU/ASCTU is a waste of effort on 90% of cases.

The technical message board has seen loads of activity about all aspects, including whether the Reflux still should have the coolant fed to the reflux condenser or the final stage alcohol condenser first. What are your views? I think it is a bit like asking whether the propellor should be mounted at the back of the aeroplane pushing or at the front pulling. Whichever way the still works fine and produced some high-grade alcohol.

The electronic calculator was extended a few weeks ago, thanks to the HTML advice received from another newsgroup. Now that i can handle square-roots I have added frequency and coil-winding calculations to the tables.

I have also received loads of E-mail asking how I draw my circuits and PCB foil patterns. there is a page there with examples that explain everything, right down to the keyboard keys to push. Do not expect any high-tech answers because it is very basic and simple. No software, No code, No preaching about products. you have all the software you need in you basic computer.

Well, there is the latest news, sorry there is not too much of it at the moment. Best regards from Harry

Hello , I have a VX-5 forsales. NEW CONDITION It's about 3 months old
a 9Dxxxxxx series ,and I have never had a problem with it.

It didn't do any hardware mods, I just use the Sofeware EVE to mods it. I'm
not use 6 meters at all since there has no 6M repeater.
and the main reason I selling it is I need the money for my school . It's
comes with radio,antenna, box ,manual , case(CSC-73), Rapid desk
charger(CD-15), Mic adapter(CT-44)and
the RS clip on belt clip. I don't want to give it up but
I need to pay by school for next year. I'm asking $349 + shipping.Thanks
you!! Victor iden1000@hotmail.com

Harry,

Thank you very much for your excellent site.

I really like the graphic style of your schematic diagrams so I would appreciate it if you could tell me with what software you create them with.

Regards

Terry Gaff

Harry, you've crossposted to too many ngs, especially the alcohol ones. Try to keep on topic. I'm sure the guys (HICK!) in that ng don't want to hear about some dumb electronics stuff.

I checked out your High Power FM Mic page. I think there is some good ideas in this, but then I think that there are one or two that are bad. The one bad one is to use the microphone preamp stage to bias the base of the RF osc. This is just asking for drift problems. I would put a coupling cap between the two stages and use two resistors to bias the RF osc. Another thing is that with 330 ohm emitter and collector resistors, this circuit will take a lot of current from the battery, maybe 30 mA depending on what the base bias voltage is. Batteries may not last very long.

Oddly, I wonder why you chose a PNP for the output stage. Just wondering.
I would have used a bit larger cap between the mic and the preamp, maybe 0.1 or 0.22 uF (aka 100 to 220 nF).

I noticed on your picture that you used a PC board for this project. I think it would be a good idea to fabricate the two low value pF caps from plates on the PC board. You've already done that to the inductor, so why not the caps?

I've been putzing around with an AGC circuit for this kind of FM mic because in order to get it to have decent sensitivity, the gain has to be enough to modulate at least 30 percent. But then if there's a loud sound, it overmodulates very easily. So I'm working on a cheapo AGC that uses a NPN bipolar transistor to short the AC coming from the microphone to ground. Of course it has to have DC blocking caps, there, too. SO far, it works okay, but I haven't checked it to see how much distortion it adds to the microphone. But for this purpose the distortion is hardly important, especially if it adds a lot of compression to prevent splattering overmodulation.

I've mentioned here before that the Dark Portal thief/plagiarist has stolen some of your schematics. Are you ever going to do anyting about it? CAN you do anything? The lowlife is in a different country.
Later..

Hmm, you must have read this on alt.alcohol.  Wonder why he posted it
there...  The only relevance I can see to alcohol is that a successful
project is often celebrated afterwards with a few drinks. :-)

I get asked this question loads of times. So much that I have written it
down - take a peek at :
http://hem2.passagen.se/sm0vpo/info/drawcct.htm
best regards from Harry

You obviously did not see the pages about brewing and distilling! It was
mentioned in the text!

If we were talking about the days of germanium transistors then I would agree with you whole-heartedly, but the fact is the circuit is quite stable under quite wide conditions too! The only real problem would be leacage of the input cap.

> Oddly, I wonder why you chose a PNP for the output stage?

Two reasons, (refer to the PCB layout?)1. If you use an NPN then you need an extended ground track and one track crossing = another link.
2. I have a lot of BC557s

> ... to fabricate the two low value pF caps on the PCB ...

1. That would require a double-sided PCB to obtain sufficient capacitance.2. This project has been used at 120MHz and as low as 75MHz.

> I've been putzing around with an AGC circuit ...

I had thought about a limiter but decided to stick to KISS.

> ... but then if there's a loud sound, it overmodulates easily.

Yes, quite true. Fortunately this circuit is intended for education, to stimulate the interest of newcommers and is not intended to be used for high fidelity broadcasting. I also had compalaints that the Mic sensitivity of the V4 was too low. Would you believe that this high sensitivity has received loads of praise?

> So I'm working on a cheapo AGC that uses an NPN bipolar transistor to short
> the AC coming from the mic to ground.

I would be interested in that. Wouldn't an FET give a more linear effect? I would however be interested in your results. I have some similar circuits already created, perhaps we could share?

> I've mentioned here before that the Dark Portal thief/plagiarist has
> stolen some of your schematics. Are you ever going to do anyting
> about it? CAN you do anything?

I do not think that I can do anything about it but I want to look into it anyway. If you have any suggestions then I would be very gratefull.

Anyway, many thanks for your coments. Best regards from Harry - SM0VPO

Well, since (I think) the caps were ceramics, that shouldn't be a
problem.
[snip]

> loads of praise?

Well, I've built several lately and they all work okay, I just don't
use the audio transistor's output to bias the RF Osc stage. One thing
that you'll have to admit is that whatever the drift is with your
circuit, it's worse than if the RF Osc is not biased by the audio
output. Like the gain of the audio stage is several tens of times the
input, so any bias change on its input is amplified by that much more.

> > So I'm working on a cheapo AGC that uses an NPN bipolar transistor to short

> I would be interested in that. Wouldn't an FET give a more linear effect? I
> would however be interested in your results. I have some similar circuits
> already created, perhaps we could share?

Yeah, I have some using JFETs too. I used the one in Art of
Electronics, to get more linearity.

The setup goes something like this.

```
      +V
       |
      res
       |  + cap    2.2k           cap
  Mic -+----|(---/\/\/\----+------)|-- to preamp input
                            |                                 +----+
                             \|  22k or more       1N4148     v   |
                     NPN GP
|-----/\/\/----+-------|<---+-/\/\/-+--<  from
                            e/|            + |            |  25k pot
preamp
                             |              cap 1 uF to   -
```

```
output
                            gnd              | to 4.7 uF  ^ 1N4148
                                            gnd           |
                                                         gnd
```

The preamp is two stages with direct coupling. The whole thing runs
off 9V.
I've found that the resistance of the transistor goes so low that it
basically shorts the whole mic signal to ground. Sometimes the time
constant is so short that it tends to pump. I think that it needs to
have small coupling caps between mic and 2.2k to keep low freq noises
from making it act weird. I've still got a lot ot putzing to do
before it will sound decent. I short the base of the transistor to
ground to disable it and the preamp sounds decent. Then when I remove
the short, it starts to sound grundgy, but it does compress, maybe too
much.   Email me at hotmail.com, account veryfree123 for more info.

> > I've mentioned here before that the Dark Portal thief/plagiarist has

Well, you could send email to his provider and maybe the provider
would kick him off or better make him take all the plagiarized
schematics off, which in his case is just about everything.

> Anyway, many thanks for your coments. Best regards from Harry - SM0VPO

I am looking for a transverter for either 6 or 2 meters.
Must be 28 MHZ if if you have a 6 meter then 10 watts out is
fine if it is a 2 meter I need at least 25 watts.

Thanks for reading.

John W5HUQ

I was wondering what is the maximum voltage battery pack I can use on this radio? Does the battery pack from a HTX-202 fit this radio? Can I use the radio while it is charging? Can I hook it up to an external 13.8V power supply? Sorry for all the questions but I am fairly new to Ham Radio and just bought this radio used with no manual, so I wouldn't want to break it first thing.

the max voltage for the IC-2at is 8.4 volts unless you have the 12v adapter pack with it. yes the 7.2 volt HTX-202 packs will work fine with it.. the HTX-202 was redeisgned from the ICOM IC-O2AT.

My -2AT manual doesn't specify a maximum voltage, but the BP-5 battery
supplies 10.8V (and 2.3W RF out), so at least that much is acceptable.
I don't think it's intended to be run direct from 13.8v.

I haven't tried it but I've read that batteries are interchangable
with the HTX-202.

Manual says NOT to charge battery while radio is on.

the IC2at requires an adapter to be used with it in order to run 13.8v.. the
202 is based on ICOM's IC-O2AT design.

Hi, I'm a new, young ham, college student... an my question is: Is a
TS-520SE a good radio for strarting in the ham or is too obsolete?, What
antena and coax I have to choose (economic, please...) to make some DX's
with this rig; specially if I live in a building and the roof is too far -
and the wind speed is very fast?.

Asmel Colina - YV1DOG.

Hola, soy un joven "aprendiz" de radioaficionado, y me han regalado un radio
Kenwood TS-520SE, mi pregunta es: es bueno este radio para empezar, o es
demasiado obsoleto?, y que antena debo utilizar, si vivo en un edificio
alto, y con mucho viento; ademas de que cable coaxial puedo conseguir que no
tenga mucha perdia, pues vivo en un piso bajo y la antena estar� lejos...?

Asmel Colina - YV1DOG.

I also just bought a TS520 (without S and E), and the sensitivity is 0,25 microvolt according to the specs. I can hear lots of Italians on an indoor TV antenna!
I bought a MFJ-1796 vertical dipole for 40-15-20-10-5 and 2.

By the way, does any of this groups readers have a modification so the 10 mhz receive-only section can be changed to a receive-transmit section?

Asmel,
The TS-520SE is a perfectly good radio to
begin your amateur 'career' with . I had a TS-520S
and was happy with it. I don't think it has 160M
though. If 'top band' is not a consideration,
then go for it.

The TS-520 is very old, but if it is in good condition it will serve you well as a starter radio. As for an antenna, dipoles are always good. A simple doublet fed with balanced line can serve as an all band antenna when used with a balanced tuner (or even when used with switched lengths of feed line substituting for a tuner if you're strapped for cash). If you insist on coax feedline, then you might consider a trapped dipole or multiband fan dipole instead. They are more trouble to build, but you can feed them from the TS520 without an external tuner.

If you have good electronic, electrical and general mechanical repair skills and are interested in spending 6-12 months as a volunteer on a remote SouthPacific atoll, working in a small meteorology department (with very friendly people) responsible for 9 small islands in the Tuvaluan archipelago , please send us your resume.

The Tuvalu Meteorological Service urgently needs to fill the open position of Station Technical Officer responsible for maintenance and repair of all computer, radio communication (satellite and SSB), electrical and mechanical equipment of the main station on Funafuti, as well as that of the out-stations on Nanumea, Nui and Nukulaelae.

Tuvalu, situated approx. 700 NM north of Fiji, is the world's 3rd or 4th smallest country (in terms of land mass) and became independent from the UK almost 20 years ago. The outer islands of Tuvalu count among the last unspoiled South Pacific paradises.

The Government of Tuvalu will provide a cost-of-living allowance which covers food, accomodations and medical care. Travel costs to and from Tuvalu are normally not covered but exceptions may be made for highly qualified candidates. The official languages are Tuvaluan (no knowledge required) and English. There are no known, major endemic infectious or parasitic disease risks.

Henk Meuzelaar
TIMES* Project Coordinator

(* Tuvalu Inter-island Medical and Educational Services)

Wouldn't hurt to be rich either! "Volunteer" doesn't buy much radio or computer equipment to say nothing of a good steak dinner once in a while. Besides, the wife wouldn't appreciate me cavorting with all those South Sea beauties while she suffered with the ice and snow of an Ohio winter.

Here's a new service I'm trying out on my website:

If you have recently passed your amateur exam and are waiting for your calls, visit this page and enter your name and state. Each night my computer will check the FCC daily activity and if your name is in the list, it will automatically send you an e-mail with your new callsign!

This is brand new and mostly untested, so let me know how it works and how you like the idea!

I am going to add a non-web way to register (like via e-mail) so users without web access (like Juno) can use it.

The URL is: http://davisfamily.nu/hamcalls.htm

73,
Chris KB0WWP

I have found some of these excellent 6B4G valves. 6C4C in Russia is equivalent to 6B4G and it looks identical to the old Sylvania 6B4G with double anode stapped together by a metal plate, not the type with two separate anodes. This 6C4C valves is very well built and is of high quality. It is unlike the new Sovtek 6B4G which looks more like a scaled down Sovtek 300B with a single anode.

I don't have many 6C4C left, so e-mail me if you are interested

Best regards,

Arnold Goksoyr

I am not sure, all is written i cyrillic letters and I don't read that
very well.. A sheet with techical data is enclosed with each valve,
and the last line reads: 3 4587   03.79 THp 10 000
The 'H' in THp is not a real H, but looks a bit like H.
The valves has a rhombic logo with the number 54 inside and the
letters OTK 71 on the glassbulb. In addition to this there is the
coding 6C4C, probably a date code: 85 01 and another logo
which looks like a circle with a 'C' inside and three short paralell
lines one the left and right of the main circle.

The valves has two getters inside, looks like a saucer upside down.
The base is black, and pin 1, 4 and 6 is missing.

Regards,

Arnold Goksoyr

It'll have a "C" logo indicating it was made by the
Svetlana factory. Only place, AFAIk, that made that style
of 6B4-G in Russia, at least in latter years.

The Russians also made 2A3's, but I've never seen one.

What about FM900s? I have a few people who use the EPROM programmer I
designed to program these.

Cheers
Glenn

For the FM900 there's FPP 3.0. Copies float around on the net. FPP 3.0 writes the radio configuration into a 'bin' (binary) file you can send to almost any EPROM programmer.
I havbe used it extensively for an FM913 and an FM906.

Also see "FM900?" posting of 18th April last in this ng.

Two questions. Does the bin file created by FPP simply get written
straight to the EPROM with no intervening steps (presumably starting
at address 0 in the PROM)?

I couldn't find the FM900 posting. Did you mean April 1998? If so,
where can I get the archive?

Cheers
Glenn

all three can do be modified to do MARS/CAP. All are nice radios too. You must decide on which features you want the most. The VX-1R only does 1/2 watt on battery, the 5R and 50R do 5 watts. The 5R has 6 meters, the 50 doesn't.

Jeff

I added a few things to my site...I got some new toys and love to show
them off.
Icom PCR-100
Pro-2037

Pro-70
And I got back into the metal detecting hobby with a White's Eagle Spectrum.

I also added a FCC band plan page and a feedback page.

Wear it out!

Yes in principle it is quite possible to send and receive email over HF or VHF radio, the problem is the available data rates.

Imagine connecting to your ISP at only 300 bits/S! But it is worse than that, consider that you and 10 other people are trying to share the same noisy, 300 bps link. That is TCP/IP over HF radio.

If you can get more bandwidth on the radio signal then in principle you can send faster. On VHF things are a little different in that wider bandwidths are more readily available but performance is typically limited to 9.6 Kb/S, still not brilliant but almost workable for short text messages.

If you are prepared to move up to UHF or better still Microwaves then you can begin to approach realistic data rates but then the range is very limited perhaps only a few 10s of miles point to point.

BTW if you want to do this then you will require a transmitter licence. I suggest that you take look at the ARRL or RSGB pages for general information on Amateur radio and possibly the TAPR pages for more information on packet radio systems.

www.arrl.org
www.rsgb.org
www.tapr.org

There is a book by Ian Wade 'NOSintro' ISBN 1-897649-00-2 that explains some of the principles, what you need and how to configure KA9Q's TCP/IP package for use over radio links.

Of course if you want to do it on a commercial basis then that is an entirely different story.

Hope this helps

Depending on where you are, there are qutie a few BBS systems on 2m that have internet links to them at some point. If you use a TNC using AX.25, the BBS will provide the link to the TCP/IP network.

Check with your local sysops.

On Mon, 10 May 1999 20:25:08 +0100 , Rory spewed forth to alt.ham-radio.packet:

Here is a website devoted to internet connectivity via
HF radio. We are really talking here about COMMERCIAL services
and not just amateur radio.

<http://www.nsrc.org/wireless/HF-radio.html>

8-ary modems of the type used for automatic link establishment

(ALE) also improves HF-internet performance.

Trish

Does anyone have any idea where I might find at least a "Terminal
Program" for CE that will allow for connecting to a PK-88 for Paket
opperations? I'd also like to use my HP620LX for tracking, so Tracking
software would be a plus.. You figure with all the CE units that are out
there, someone with the know how, would think of us HAMS..Hope to see
Ya'll at DAYTON.....

The built in terminal program should work for packet operation with your
PK-88. Here's link on how to set it up...

http://www.qsl.net/kc7gnm/packet_hpc.html

Good luck,
Jon/KC5MOP

What kind of tracking? WinAPRS for Windows CE will be coming around soon, so
if you are into APRS (Automatic Position Reporting System),
then wait a bit for WinAPRS for Windows CE.

You need to get on the APRS reflector at www.tapr.org to watch for the
announcement.

As fas as the terminal inside CE, it works fine with my PK88 and KAM
controllers.

Using APRS software it is possible to send (I haven't received yet but also possible) email. I do this with a handheld radio that communicates with another radio connected to a computer that is connected to the internet. I was amazed that it worked.

For the past several days there has been a musical noise
on 17 meters.  I receive it at 18.116 with the main signal
at 18.091.  Sometime there is a similar signal offset to
the low side.

I thought at first it was originating locally, but I confirmed
that it was not in my shack.

Has anyone else observed this?  Or can anyoen shed some light
on what mode it may be originiating from.

Thanks

Hey Rick
 I have tryed to listen hear in GA and I have not heard it. This may be
that I'm in the skip zone of this signal. I hope you can find it. I'm in
the Northeast corner of GA. You also might be picking up a image signal
from a local radio station or a image from the inside of your rig. For
example I used to have a SB102 and on certian spots on 10 I could pick
up a CW beacon OFC was the Beacon. I also didn't live very far from the
local AM station in Aberdeen and I could pick up harmonics and images
from them. Anyway I hope I helped you
                  73 from Oris

Contrary to what people say all problems have been ironed out of the
VX-5 current model. It is a supurb radio and reflects the 50's outdated
nature (+5 years).
The 50 can be bought dirt cheap now but $US320 for the 5 is pretty good.
my 5R is an export version bought in Singapore, rx 500kHz-16MHz,
48MHz-1000MHz all mode. I say all mode because if you want to build
yourself a BFO you can even RX SSB and CW.(stay tunned to the VX-5
mailing list for developments on this)
TX 48-65,108-220,3??-5??MHz

Its a new toy so I like it what can I say. No CTCSS problems.
Cheers
Eric.

I *was* going to jumi in and say how much MORE the batteries were for the VX-5R...but they really aren't that much more for a replacement than, say, a Maha NiMH FNB-47 (1800mAH) is for the FT-50.

Although both the VX-5R and FT-50 are built to "MIL Specs," the VX-5R is more "bulletproof" than the FT-50.

And bless Yaesu...speaker-mikes and ADMS programming software all are interchangable for the VX-1R, VX-5R, and the FT-50. (So, according to "Bradford economics," I will actually SAVE MONEY by purchasing a VX-5R, 'cause I already have accessories and software for it...<g>)

I'm VERY interested in running APRS on the CE unit, If Theres not a reason

to keep the HP620LX I'll post it for sale here also... Thanks for the
Terminal tip, This did work! Tracking would be nice but APRS is realy in
need for the Handheld's.. There is a version for the Palm Pilots at :
http://www.tapr.org

Hi! How are you doing? I'm going to get a new HT either Yaesu VX-5R or
Kenwood TH-D7A(since I may try to operate packet radio). Any suggestion?
Thanks!!

Hi,

I would go with the Kenwood radio. The TH-D7A is wonderful for APRS.
The TH-G71A is a great HT also. I own both. If I was not doing APRS I
would use the TH-G71A with an external TNC.

Just a note from an FT-50 owner..
I've had mine for a few years now. It's an excellent radio. If your budget isn't very flexible, the ft-50 is a great buy (like an earlier message said, it's fairly inexpensive now). If you've got the cash though, the 5R is a good choice too.

I have a VX-5r and tried to use it while plugged into AC. It's a no-no. The radio will shut off. Then, I read the manual and it says +ACI-AC RX only+ACI- I haven't contacted Yaesu yet to find out why.

Using the DC adapter, RX and TX both work.

it might have something to do with the fact it wasn't designed for it too low
an amperage for one....remember the vx-1r only put out 1 watt max the vx-5r
puts out 5 so they never planned on a charger to be used as a power supply.

Dr OM/YL

This mail to inform You that the latest edition
of the OZ50MHz DX Bulletin #99-005 is now uploaded

at my homepage, at the adress;

http://www.qsl.net/oz6om/

Due to breakdown on the QSL.NET server, wich have
delayed the release, hve the bulletin been released
Sunday instead of Saturday.

Do not expect to see a weekly mail like this ! - by
now You should have caught the rutine - so please
have in mind that the OZ50MHz DX Bulletin normaly
is uploaded late Saturday evening (UT time)

vy 73 de OZ6OM "Matt"

I have some 4pr1000a tubes for sale. They are pulls and have been tested
live in a BTI amp at 3KV on 80M (3.5 Mhz). They put out 800 watts in this
test. There are a few that performed at 1000 watts, but they are going fast!
The going price has been $125 + shipping for the KW tubes and they are
almost all gone (may be more coming). Any interest or offers on the lower
performing tubes? Make an offer?
73 es good DX

Good to hear. Did manage to track down a Barlow Wadley site (it's in the
links page at http://radiodx.com. Not sure if it has circuit diagrams
there.

Hi,

Actually, the transformer that I am looking for isn't THAT peculiar or unique, but I just can't find it anywhere. I am looking for a dual primary (for either 120VAC or 240VAC) triple secondary power transformer. One secondary winding is for, say, 10VAC from which +5 VDC will be made. The other two secondaries, which could be a center-tapped autotransformer, will be for 25VAC, from which +/- 15 VDC will be made. All that might seem strange to get from one transformer but if one looks around at power supplies, one sees that +5, +/-15 Volt supplies are quite common, especially for use with audio systems.

I have tried a number of web sites (all the obvious ones) but can not find the transformer that I am looking for. Please help if you can lead me to the right manufacturer.

Thank You
Tom

Microtran (digikey carries them) has a similar one to your description.
Actually the analog supply secondary is center tapped.
Expensive. Can't you use +/-5 for your analog supplies? Then you could use
a garden variety transformer.

Or, if your quantities justify it, have a custom tranformer wound with one
secondary at 10V and another at (say) 15V and use two half-wave rectifiers
(2 diodes) for the analog supplies.

In the case of the Microtran product you would just use a
bridge rectifier to create the two analog supplies.

Check Hosfelt Electronics, they have a lot of surplus transformers listed in their catalog.

All transformers like that are regarded by the industry as 'custom' and do not feature in catalogues or lists. How many of them do you want? Some manufacturers will make you as few as 12 (although the price may not be attractive, it wouldn't be unreasonable) whereas others won't entertain any orders for less than tonnage.

You just have to call manufacturers with your spec and ask.

E.A. Sowter LTD (http://www.sowter.co.uk) will wind custom power and other audio transformers in any quantity for no additional charge, if you don't mind paying shipping from England. They charge only by the size of the core, not for how many windings you have, so you can have them do all kinds of funky taps. They also give free quotes and will tell you what size core you will have if you give them the voltage and current ratings of each winding. These transformers are a good value if you need high power and special features and are having trouble finding other sources.

Try WorldRadio magazine or QST to start. If there were a good list
posted on the web I would like to see too. BTW, there are couple of
good ones coming up here in the Midwest soon. There is one March 5, 6,
& 7th at the ARRL Nebraska State convention in Norfolk, Nebraska at
Northeast Community College. For more info try
http://members.aol.com/davidn0xbn/evarc.html

This one is the best I've seen. The only ones not there are the ones not reported to ARRL.

I have 6 pcs 250TH Lewis and Kaufman - probably made on license from
Eimac - for sale. These are brand new, in original super heavy duty
military boxes. Never been used. A very nice valve, indeed.
E-mail me if you are interested.

I have found some of these excellent 6B4G valves. 6C4C in Russia is equivalent to 6B4G and it looks identical to the old Sylvania 6B4G with double anode stapped together by a metal plate, not the type with two separate anodes. The 6C4C valves is very well built and give you an impression of high quality. It is unlike the new Sovtek 6B4G which looks like a scaled down Sovtek 300B with a single anode.
E-mail me if you are interested.

Hello,
I know that the "weather frequency" is 162.4-162.55 MHz. I have a
question, however, that pertains to the NOAA emergency broadcast tone.
First, is there a header of some kind to "wake up" a sleeping weather
radio for the emergency tone?
Second, how often would the weather radio have to sample the airwaves in
order to be able to receive this emergency alert header?

Any info would be GREATLY appreciated!
_Daren

I understand, and don't quote me, 1050Hz, and tone length is a few seconds, depending on receiver. You can call the NOAA closest to you and ask, they may have that answer if a HAM works there..

Good luck.

Please note that the NOAA weather alerts are moving to
the new "EAS" "Emergency Alert System" which actually
sends data over the air.

There are LOW COST receivers that are just starting
to show up on the market for consumer use that detect
and/or decode the EAS protocol.

I've purchased two of the new EAS alert receivers
made my Oregon Scientific (imported by the way)
for as low as $40.00 at a local electronics store

You might want to look into the new EAS protocol
instead of 1020 or 1050 Hz decoders ..

I have 6 pcs 250TH Lewis and Kaufman for sale. They are probably made

on license from Eimac. These are brand new, in original super heavy
duty military boxes. Never been used. A very nice valve, indeed.
E-mail me if you are interested.

Best regards,

Arnold Goksoyr

More than 1800 different valves in stock. Plus: sockets,
transformers, caps, resistors and books about valves and
valve equipment. Many rare European valve types.
You will find it at my homepage: http://demostenes.vestdata.no

 Hi,
     I'm about to start training for my NRAE (UK).  I need a HT or moblie
 that is under �100
 Somthing decent.  Doesn't have to be a "brand".  I'm not bothered about
 apperances but it must work to the UK specs etc...

 Please email me:

the below listed repeater needs a 70cm motorola mobile duplexer.
it only runs 25 watts output on 70cm so it's a good match.
quite awhile ago, someone was selling them for $50 but no contact.
anyone out there care to help out the machine.
thanks for your time.

Hello,

Check out my auctiion on EBAY for a pair of Radio Shack VHF portable radios. These are two channel, 1 watt VHF business band radios set on freqeucny 154.600 (channel a). Other freqeucneies are avaiable from you Radio Shack dealer for channel b. Normal wear, but in good condition. Includes nicad packs, belt clips, and flexible antenna for each radio. Also will include a charger at no extra cost!!! BIDDING IS STARTING AT $45.00 FOR THE PAIR!!!!!!!! This is a great deal!!!! Check it out!!!!

We will demo Iphone Repeaterlink to a 5th grade class today.

Please call for K2DJ. Look for the K2COP repeater in the REPEATERLINK room.

We will be monitoring the repeater output in Fairport, NY at 1515 UTC (11:15 AM eastern time) today, Wednesday, April 14.

Sorry for the late notice. This demo is for a Radio Coaches class (the last of 10 classes).

73,
Peter, W2SKY

Hi,
    I've recently got two Motorolla CD 100 SRBR (Short Range Business Radio)
rigs, they are set on 461.170mhz. I've been told that I can convert these

for use on the 70cm/2m band?!
Is this true? Plus I need any info on these rigs...Plus(again) does anyone
have any info on "Zycomm U-200" SRBR handheld?

Cheers..

David

We, RT Systems Amateur Radio Supply, have seen numerous radio that were damaged by using the software that was found the internet. The usual charges to repair the damage is $160.00 plus shipping.

We can do the mod for you for $30.00 plus shipping.

I've got a list of all my tubes for sale and their prices at

http://www.portup.com/~drjohnson/tubepage.html. Prices are negotiable when buying several tubes, or will put any tubes requested on an Ebay auction, in any lot you want. So, if there's 5 tubes you need off my list, and you want the best price, I will put them all up for auction in one lot if you want.

Not only that, but some of us have ISPs that remove this crap from the
newsgroups, but not when a replier reposts the whole thing. So we get
to see what we missed, courtesy of a well-meaning friend. ;-)

When a brand new one is $194 delivered to your door from HRO, it hardly pays
to look for a used one.  Used, are nearly new price.

I have some college level math books for sale.
All are in good shape.

Essentials of Mathematics, by Person, 1968, 2nd edition
General Math intro with Algebra, Trig and Geometry in one book
$10

Introduction to Modern Mathematics, by Vance, 1963
Algebra, Trig, and various functions
More depth than the Person book above $ 15

Calculus by Sherwood and Taylor, 1954, 3rd edition
The title of the book says it all! $ 18

Differential Equations, by Morris and Brown, 1964, 4th edition
An "in depth" book. $ 15

Modern Elementary Statistics by Freund, 1967, 3rd edition
Uses very, very little calculus. $ 14

Trigonometry with Tables, by Welchons and Krickenberger
1960 - Basic Trig book $ 10

Prices do not include shipping from Florida.

Thanks, and Happy New Year.

I have some modern Electronics Fundamental Text books available. All are currently in use at various colleges. They are all Associate Degree (Technician) level.

Basic Electronics by Grob - 8th edition - 1997 - $ 30

Electronic Principles by Malvino - 6th edition - 1999 - $ 30

Electric Circuit Fundamentals and Electronics Fundamentals - 3rd edition by Floyd - 1995 - $ 30

Electronic Devices and Circuits by Hassul and Zimmerman -
Conventional Flow version - includes student workbook
I think this is a 1998 copyright, but it is still in shrink-wrap, and I do not want to unwrap it to find out for sure. $ 30

Digital Electronics by Uffenbeck - 1994 $ 28

Prices do not include shipping from Florida. All books are new. By the way, most of these are large, heavy books, weighing about 6 pounds each.

E-mail to W8EK@usa.net

Thanks.

I guess RT Systems (CB Supply?) Amateur Radio Supply just needs the money
and no MARS/CAP on file.
Be clear in the N/G's.

I've got a list of all my tubes for sale and their prices at

http://www.portup.com/~drjohnson/tubepage.html.  Prices are negotiable
when buying several tubes, or will put any tubes requested on an Ebay
auction, in any lot you want.  So, if there's 5 tubes you need off my
list, and you want the best price, I will put them all up for auction in
one lot if you want.

Order 10 or more by January 15th and get 50% off!!

Does anyone have any comments or information regarding the add-on board available from Vine that redistributes gain in the above rig and claims to reduce the level of audible hiss in the rx? I have emailed Vine for details and not had a reply. The details on Vines page are sketchy - see
http://www.gw3ydx.demon.co.uk/whatsnew.html
Any comments, experience, would be appreciated.

I have the following ARRL publications for sale:

All are in good shape.

1979 ARRL Handbook - $ 12

1972 Radio Amateur's Operating Manual - 3rd edition - $ 4

1970 Single Sideband for the Radio Amateur - 5th edition - like new $ 9

1956 ARRL Antenna Book - 8th edition - $ 12

1968 Mobile Manual - 4th edition - like new - $ 12

1976 ARRL Ham Radio Operating Guide - first edition - $ 8

1986 Tune in the World with Ham Radio - 6th edition - $ 5

1991 Now You're Talking - First Edition - $ 8

1993 Now You're Talking - 2nd edition - $ 12

1976 Radio Amateur License Manual - 75th edition - like new $ 10

1977 Learning to Work w/ Integrated Circuits - First edition $ 6

1978 Solid State Basics - First Edition $ 8

1993 FCC Rule book - 9th edition - $ 4

1987 FCC Rule Book - 7th edition - $ 4

The ARRL Training Program - Official Novice Student Workbook
No date or edition listed, but appears about 1985 $ 3

Booklet to go with ARRL Code kit - 5 to 13 WPM - $ 2

Repeater Directories - $ 4 each
1977-78
1978-79
1979
1983-84
1987-88
1989-90
1990-91

Operating an Amateur Radio Station $ 2 each
1969 - 52nd edition
1976 - 57th edition
1978 - 58th edition
1980 - 59th edition
1984 - 62nd edition

Public Service Communication manual
no year listed - prior to 1970 for sure - appears to be first edition $ 3
1970 - 3rd edition $ 1
1985 9th edition $ 1

1974 Ameco Radio Theory Course $ 6

I have found some older ARRL net directories. All are in good shape. Those in the 60's and 70's are $3 each, and those in the 80's are $2 each, plus shipping from Florida.

I have the following years are available:
1968-69
69-70
70-71
71-72
72-73
75-76
77-78
78-79
79-80
82-83
84-85
1989

Although not directly radio related, someone might be interested

Handbook for Patrol Leaders (Boy Scouts) - 1950 copyright - 1959 printing
$18

Exploring (Boy Scout Explorer handbook) 1958 - $ 12

Girl Scout Handbook - 1953 - $ 12

1986 American Red Cross "Expect the Unexpected" $ 2

Prices do not included shipping from Florida.

Please reply to W8EK@usa.net

Thanks.

A power rating would be helpful. I assume that you're making a dummy load
to tune a radio transmitter. In any case, have a look at the American
Radio Relay League literature in your library. The Radio Amateur's
Handbook ought to have any number of suggestions for how to build your own
resistor. If you're just tuning up a CB radio, I use a #47 lamp. Ain't
elegant, but it seems to work pretty well.

Make it yourself? 94x 4700 ohm (0.5W) in parallel.
Two squares (or disks) of stripboard, R's soldered
between them, like the old cordwood construction.
It will end up roughly 2"-cubed.

Still a great little receiver. Manufactured in South Africa. The
inventor later went to the UK and worked on the famous Racal RA-17
series which uses the same principle. Yaesu went on to use it in the
FRG7 and 7000.

I seem to recall Rothchilds in Lower Hutt being the agent way back
whenever, but I could be wrong. If you get stuck, I might be able to
arrange a photocopy of the circuit diagram from a member of the NZ Radio
DX League.

I'm not sure if I still have any info from early WirelessWorld in my "offsite" archives. IIRC from the age of the thing it probably used germanium RF transistors like OC170, which will be near impossible to replace. A bit of ingenuity should give better longer lasting results with a modern FET.

Hamfest Shopping Guide puts current value US$100 - $200 ...

Southern Cross DX Club in Adelaide list 2 BW rx for loan to club members so they may have some service info:

Hi there
can someone please tell me where i can buy a couple of
Yaseu battery boxes for a FT411 E 2mt handie,or a converter from a PS to the
radio itself
ive called everywhere i cant get one anywhere..
Help
pS its the same as all of the Yaseu handies FT470 etc etc...

many thanks
Si

Wow that brings back some memories indeed. They were a very elegant little receiver that converted to an IF frequency a bit higher that the highest frequency to be received (30 MHz) and then tuned across that band with a double conversion to get the narrow bandwidth necessary for good shortwave reception. The up conversion got rid of the usual image rejection problem so prevalent in the cheaper short wave receivers.

If I remember correctly there was a description of the workings of the Wadley Loop in a Wireless World during the early 70s I think, or it may have been Electronics Australia! But the description was good and followed up by construction articles for the building of such a receiver.

I don't know if the South African firm is still in business, but the one that I saw was in Niue of all places in 1978, when I was crook in hospital with Pneumonia! It provided me with a good contact with the rest of the world during that time! The things that you find in out of the way places!

Regards to you all

Gentlehams,
    I am looking for an SWR measurement setup that will work in the GHz

```
bands. I know that you can get simple SWR meters for the HF and 2 meter and
440 bands, and I was hoping there would be a similar product that measures
SWR in the 900MHz to 6 GHz frequency ranges. I have done a bit of searching
myself and all I seem to be able to find is RF Network Analyzers to do this
job. This is much much more than I need and I do not want to spend the
amount of money this set-up would cost.

    If you know of a simple and cost effective SWR Meter setup for these
ranges I would really appreciate it.

    This is for a commercial application, but I thought you guys would be
able to help me.

73,
Scot Mc Pherson

Basically, what you need is a broad band directional coupler and a detector diode. This will detect the power reflected back from the match into the antenna or whatever you are connected up to.

Your specs are a bit sketchy and don't mention power handling requirements, but this sort of stuff is readily available as microwave test gear in waveguide and microstrip. I would refer you to some one like MAcom (AKA microwave associates).

You would probably be able to make a bolt together system at a reasonable cost.

I am sorry, but I can't give you more information than this on an informal basis. I contact me if you require a formal design consultation service.

Regards

Michael D Lee

I'm looking for examples of these mics, in working or non-working condition.

Please contact me here:

resgraph@lightspeed.net

Sincerely,
Ray Beltran

I have some 4PR1000A tubes. They are all pulls and have been used. Some are Eimac and some are Penta Labs. What are these tubes worth? Anyone have any interest?

Let me know!

Could someone point me in the direction of a good tech article regarding proper care and charging of Li-Ion batteries. I believe they should be completely discharged before re-charging. Is this correct. Also, are there problems associated with over-charging?

Thanks

Try http://www.cadex.com/cfm/index.cfm?Pg=314&Lp=55&Db=&Mo=

They have GREAT info on many types of batteries. DO NOT use a nicad/universal charger!!!

Lithium Ion batteries DO NOT have memories like Ni-Cad batteries. Charge them when ever you want, just keep them charged when not being used often. My 3 year old Toshiba laptop came with a lithium ion, and it's still going strong.

Announcement of a new 6m repeater;

OH2RCH is available at 51.970MHz TX / 51.370MHz RX with 50W output power, vertical antennas.
Repeater is located at the south coast of Finland in KP20 locator square.

Access with 1750hz tone or DTMF star.

More info & images of the repeater at http://www.megabaud.fi/~oh2ch/

Waiting for the ES-openings...

And for those who didn't go the interesting web site recommended at the beginning of this thread,

http://www.cadex.com/cfm/index.cfm?Pg=314&Lp=55&Db=&Mo=

Overcharging is particularly bad for LiIon batteries; can cause metallic Li to plate out, which apparently is bad and potentially dangerous.   Trickle charging ala NiCads is verboten.

OTOH, LiIon chargers take this into account. So, don't try charging them in any charger that wasn't designed for the job!

Just recieved my Yaesu VX-5R the other day. The battery "under normal use" will survive 300 cycles of charging-discharging. Nothing mentioned about "draining" the cell dead before charging, but after charging is complete (The display tells you, and the TX-RX LED glows green <cool feature>), the HT should be unplugged from the charger, and allowed to cool down before use.

The VX-5R is an AWESOME little marvel of an HT, easy to use, great manual, sounds good, powerful, and LONG battery life. And I am/was an Icom freak :-)

Peter, I have been using my Gap Titan DX for over a year now. You may recall hearing about the storm we received in Western Michigan this Spring with estimated wind gusts of up to 130 MPH. I awoke to find my Titan DX bent over about 50 degrees and binding on a piece of PVC that holds an element. A slight movement released the pressure and back up it sprang. I haven't done a thing to it since. I've gotten great signal reports and find this to be a very servicable antenna. High marks from me.
Cheers, Dan ab8cd

hi I was looking for info on the yaesu ft-50 mods do u know if this works for
sure because I've seen the files posted somewhere before also what serial #
will this work with the new ones are around 7n******
please let me know thanks

For Sale Icom 706, 2 years old, excellent condition. Comes with, manual,
original box, mobile mounting bracket, hand mike, power cord, plus
optional FL103 ssb
2.8khz filter plus a MFJ 564 electronic iambic paddle.
$690.00

Options:
1. New in the box unused separation cable opc-581
with the control head mounting bracket not new MB-63 both for $75.00

2. IC SM6 desk microphone with opc-589 mike adapter 8 pin to phone plug.
$90.00

The whole package price if you want it will be $800.00

Hi

My Sandpiper antenna fpr 144/430mc, that was scotched on my cars backwindow
has fallen down and was damaged
now I am looking for a store to get a new one.
here in HB9 there are no more dealers selling such products

can anybody help me please

This request is a little off topic, but I cant think of a better group of people to ask than radio hams.
I have pet rats. They are quite expressive little creatures and its easy to tell when they are happy / sad etc. (if you are not a rat fan you'll have to believe me on that one) But, they rarely make a sound. They squeak with amazing force when they are play fighting with each other. But other than that they wander about in silence.
Or so I thought.
It has been suggested to me that their hearing is capable of detecting frequencies well above that of the human ear, like a dog. And not only that, their normal "rat to rat" communication are also at these frequencies.
I would like to aquire a device to convert frequencies higher than normal human detectable sound (I cant remember the range) down to audible sound.
In other words, I want to hear what my rats are saying.
I have seen such converters on nature programs on TV when listening to bats, so someone must be able to get one.
Does anyone have any ideas ?
Hope someone can humour me. HI

Make a diode ring mixer. That is four diodes hooked end to end...(all pointing in the same direction) but put a 300 ohm resistor in series with each diode. Using two centertapped 600 ohm transformers connect the secondary of one transformer to the intersection of the first and third diode resistor pair, and another transformer secondary to the second and fourth diode resistor pairs. Connect a signal generator to the primary of the first transformer and set it for about 5V RMS. Connect your Rat microphone (must have good hi frequency response) to an amplifier and hook the amp output to the second transformer primary. Set the gain of the amp so that noises as weak as a rat might make will be about 5 VRMS as well. Take the center taps of the two transformers to your headphones. You will hear the lower sideband (inverted speach) of the rat's conversation when you get the frequency right. Generator - Rat speech frequency = audio out. As long as you keep the generator at a higher than audible frequency you won't hear any of it feed through the system. You might have a little feed through from the mic, but that will be many dB's down.   I don't think you will understand a word being said, but you might hear these supersonic conversations converted to our audible range. You've now got a superhetrodyne rat receiver,.

Good luck de WA6QVI

Just picked up a Bowtie antenna and it doesn't match up to the manual I
have for the hf5b. The dimentions are the same(12ft x 6 ft) but it is
missing a few traps.And it is too small for their 10/11 meter bowtie.
Did Butternut make another Bowtie..maybe a 3 Band model???
Thanks in Advance

This is the last day for this auction. I'm selling my tried and true 520se with the optional 500hz cw filter installed. Rig is in good cosmetic condition - (some light scratches on the case, face is very good), and excellent operating shape. With manual. Only reason it's leaving is that I just bought a new radio (TS-570D) and wife says if one comes IN, then one goes OUT! (hi, hi). Nice first hf rig, or as a backup. Very fine transmit audio - like most of the tube kenwoods always get great reports on the sound. And the cw filter is great for picking a signal out of the qrm.

So it's on EBAY thru tonight (11/13). Currently at $250. I have a $275 reserve, but have decided to sell for $250 or above plus shipping.

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=40493038

Thanks and 73

I am a newbe to radio and am looking for a Ham setup. I know nothing about
Ham and am looking for advice on what to buy? What I need? Radio, Antenna,
license, tuners, etc.. Is there any units that have antenna, etc in one
package?
Any advice is appreciated. I would be interested in purchasing now if
someone has a setup for sale.

Thanks

Richard

Not trying to be price police or anythig like it. But it seems to me one
can buy a real nice DSP unit for the same price. I own all the same
equipment and do not find anything special about the filter except the
only way to find it is used.

Hi Richard,

The first thing you need to do is get your licence. There are several licence classes, each providing different levels of privileges. Your specific level of licence (privileges) will dictate what type of ham station you should be looking for. If you do not get a licence, it is not appropriate for you to own equipment that can transmit on frequencies that you're not licenced for, so you can save yourself a bundle by waiting until you are licenced. The process of getting your licence will teach you what you need to know to decide how to get started with your station.

Best of Luck.

I'd have to agree with Casey, Richard...

Something you may want to consider is to check your local library for amateur radio related books.

Although they may be a few (and in some cases, more than a few) years old, they will still give you an understanding of what the hobby is, and the various equipment needed for different interests - you can't possibly know what gear to buy until you understand the privileges associated with each license class, how you can operate within that class, and what YOU want to accomplish within the hobby...

Welcome to amateur radio!, and don't feel that you have to spend thousands of dollars to enjoy yourself in the hobby - you really don't...

John

Hello Richard:

There are several good sources for Ham Radio Information. Look for QST, CQ, 73
and World radio at better news stands. There are lots of ads for books and
information if you want to try the hobby.

You can also write the ARRL at newham@arrl.org and get a welcome package. I
know a great many new hams that used material from Gordon West, For all his
hi-tect he is not on the web. Try W5YI at 1-800-669-9594 for information on
becoming a new ham

73 (That's ham-speak for "best wishes")

>>Ham and am looking for advice on what to buy? What I need? Radio,

Go to http://www.arrl.org/

You can leave you name and address at the site and they will mail a
brochure of clubs and hams in your area.   Also included are locations
and dates for licensing exams. They include a brochure for ording
tapes and books for learning/studying; Yet, you can just go to Radio
Shack and get the books you need.

Hope this helps! Regards, John

Hi all.. please be aware that ALL merchandise I ordered from Roly has arrived a little late, but AS STATED IN CONDITION STATED, People do sometimes have difficulties and we can't plan for the unexpected, so let's cut the guy some slack. I posted with a simple question: 'where did you go

and what happened to your contact lines?' This apparantly sparked a rash of other postings, I assume, of a less than polite nature.... I hope it wasn't my posting that started it and if so, I do apologize to anyone affected.
Roly, if you're out there...Thanks, and hope u resolve the problems, whatever they were and all turns out for the good.....
73 to all,
Randy

Hi,

I have a NEC Versa M/75 notebook and am having trouble finding software/freeware/shareware that will acknowledge the soundcard, and being the inept one that i am, have also not had much luck by changing the irq's, etc. some software works, some doesn't. It is a built in card with windows drivers, which emulates soundblaster. I'm trying to run things like ACARS decoder, POCSAG decoder, SSTV and RTTY decoders..... am I wasting my time trying to make the "soundcard-type software" work?? Should I just order that HamComm serial port decoder and be done with it? (it do seem to have a lot more software avail.) also, anyone with input on the usefulness and operation of your hamcomm decoder, please feel free to input! Can it be used with a spectrum analyzer program?
thanks for the time and please email replies!
Randy

FINE, but forgive me if I suggest that we don't need to know all 4 times:
please remember that an NG post can take up to 15 minutes or so to arrive.
Thanks.

Gordon D.

Ha! Maybe from _your_ news server, Gordon. Mine can take from seconds to
days, depending on the routing and traffic ...   cheers tr

Bl**dy H*ll - and I thought I was being so careful, the usual time taken being 1 minute! If we can fit into the Net so fast from over here what's wrong with your system (Mass?) right at the heart of things? Change ISP?

Cheers, Gordon.

Newsgroups: rec.ham-radio,rec.ham-radio.packet,rec.ham-radio.swap,rec.radio.amateur.swap,rec.radio.amateur.packet,rec.radio.amateur.equipment,

1) Standard (brand) "Twin Bander" (Dual Band) 144 MHz/450 MHz FM Transceiver. Includes optional 100 channel memory upgrade. Can also be used for repeater or packet duties. All controls are on the microphone so you can mount the main unit anywhere in your car or truck. It includes the 2m extension cable between the microphone/controls and the main unit. It works perfectly and looks near new. It's never been abused. It has been modified so it can transmit/receive on Civil Air Patrol frequencies. It is made for mobile use so it needs 12 volts DC to operate on. It has around 50 watt output and can receive from 118 MHz to over 800 MHz in addition to the ham and CAP bands. It can receive on two different bands simultaneously, and can also be used as a cross-band repeater. Simultaneous receive and transmit is possible.

2) ICOM IC-W2A Dual Band FM hand-held Transceiver. 5 Watts output. Also modified for use on the CAP bands that have no negative effect on normal operations. This also receives outside the hambands too and includes 118 to over 800 Mhz. It can receive on two different bands simultaneously, and can also be used as a cross-band repeater. Simultaneous receive and transmit is possible. This unit can also operate packet. 60 memory channels.

3) Cushcraft R-5 HF Vertical antenna. Perfect for the 10M band now coming back alive. This unit is near-new, since it was only installed a couple hours before a neighbor threatened to sue me over it (CC&Rs). Please, no comments on that LOL... I dealt with that some time back. I don't recall the specific bands this antenna works but 10/15/17/20 come to mind.

If you don't want to spend cash, I will negotiate for certain items I want you can buy off your credit card and ship to me in exchange.

Please, PLEASE... don't contact me UNLESS you are serious about buying one or more of the above units, I get too much email as it is. I'll accept best offers for them all. $350 minimum for the Standard, $300 for the ICOM, $150 for the Cushcraft. You pay shipping costs.

73,

Jerry Bransford

So, after suffering with the TH-78, you decided to buy a TMV7a. You are obviously a masochist. Let me put you out of your misery. Give me your TM-V7A.

Glad to help.

Walter

a little letter i wrote to the kenwood customer care center on 12-16-98
followed by an earler letter and there so called responce. kennwod has a
warenty repair return wait of 1 month. which is a pile of crap.

12-16-98
well this is the the same letter i sent you on the 2nd of december, it
is now 14 days
later and still no reply. this is just as bad as the return rate on
waranty service. well
seeing how you were no help to me. i will let the people know about this
on all the ham
news groups and in email to other hams i know, encouraging a boycott of
kenwwod amature
radio equipment, along with a posting of this matter on my web site. i
for that matter
will never buy another kenwood radio. it dosent take much to respond and
take care of
your customers who work there ass of to spend way too much of there
money on your crapy
equipment even when it is know for being crapy. i have owend a 78-a and
now this tm-v7a
and have never been happy with this equipment, i was much happyer when i
owend a ft-530
from yaesu. i never had a problem with that radio. but this little
letter wont be or make
a big deal to you, youll just erase it and forget about it in a few
hours or so. put your
self in the customers shoes. spend your hard earned kenwood money on
somthing crapy and
try to get it fixed or just be happy with it and youll see what it feels

like to be
screwd. if i could return this radio i would, but i guess im stuck with
the smelll and
bad taste of kenwood in my mouth.

12-2-98
any known problems with the tm-v7a, mine seems not to be working like it
should

12-4-98
Dear Chris:
 Thank you for your e-mail. What kind of problems are you having?
 Sincerely,
 Kenwood Customer Care

Well, I must say I had a problem with a Kenwood product(s), I Emailed them
in a contructive manner, enquiring what can be done, and recieved EXCELLENT
customer satisfaction. Try being a little more detailled in your posts to
Kenwood, If there is the odd bug, they aren't going to publicize it, but
probobly would be happy to make amends. Your original post does not address
what your problem with the raido is. They can't help you,if you don't clue
them in.

Hi All. I'm looking to get involved in 6 meters and need a radio. I have
AT&T 486 DX4/75 mhz laptop with color screen, 20 megs ram, 540 meg HD,
33.6K modem, WIN95, etc etc. Great little machine with leather carry case.
Will take $350.00 for it or trade for radio equipment.   Thanks.

Sam

Hello there,

Please help me find the schematic diagram for Avantek pre-amplifier.
Model # is AK-400N and it covers 200-400 MHz.
I need to fix it for my 220 repeater.
I'll pay for the cost of copying and postage.

Thanks and Happy Holiday!.

The following Kenwood HTs and accessories are for sale:

TH-21 AT - small, synthesized 2 meter HT. Basic, without a bunch of "bells and whistles". Includes TT Pad built in, rubber duck antenna, good battery, charger, original box and manual. $ 100

TH-41 BT - as above, but for 440 MHz. Sub audible tone adjustable by DIP switches on front panel. Same accessories as above. $ 125

Stubby rubber duck antennas. Will fit the TH-21, TH-31, or TH-41 respectively. (Separate antenna for 2 meters, 220 MHz, or 440 MHz) $ 10 each

BT-6 empty battery try for the TH-21 series HTs. Hold 6 AAA batteries. $ 20

DC-21, DC (cigarette lighter) cord and power converter for TH-21 series HTs $ 25

SC-8 T, soft case for the above series HTs. $ 15

BH-3 belt clip for above series HTs $ 4

TH-21 "Special". This is an HT as above, but will transmit only. Receive is dead. HT for transmit only. Would be great for "Fox hunts", as the unit is fully synthesized, and the transmitter works fine. $ 25 as is.

Other Kenwood Accessories. All are NEW, in the original packing.

PB-26 battery pack for TR-2600 or TR-2500 $ 50

MC-43 microphone, 8 pin, hand mic, like came with most of the HF radios.
Has "Up" and "Down" buttons. $ 55

SC-8T soft case $ 15

Prices do not include shipping from Florida.

Thanks, and Happy New Year.

73,

Ken, W8EK

Hi,
Well, I'm giving it up in lieu of a new computer....

NEVER MOBILE

Yaesu FT900AT
auto freq. tracking tuner built in
modded for MARS/CAP
all the normal base model stuff....
no scratches or dents, works great!
Purchased new in 1995 from AES, (I even have the reciept.. over $1300!!)
Radio, manual, hand mike, box, papers to include factory mods, etc...
factory filters
Priced at $775, uship, No trades, please....
Please reply via EMAIL
Picture emailed on request and this one will have to be prepay, so
references available, too, from these groups even!
thanks for the time and space,
Randy, KC8CPK

We started servicing Kenwood commercial equipment 9 months ago and have yet
to be able to get even one part. We ordered a microphone and they could not
even fill that order.
The customers are providing us with radio's to butcher for parts and
replacing them as needed with motorola's

```

I have a new Yaesu ft-920 HF+6M radio and have been itching to do the Tx-expand mod found at various radio mod sites. See:
http://home1.inet.tele.dk/ehh/mods/mod/yaesu/ft-920.htm

This mod involves uploading a file directly through the serial port that will supposedly unlock Tx on the full range of frequencies.

I have searched around and read the newsgroups and some have said that this mod was not intended for the US model, and that it could damage the CPU. Others have said that it worked fine. I did not actually see any posts from anyone who did the mod unsuccessfully and ruined their radio.

I would appreciate feedback/comments from people who have performed this mod to their radios, and what the outcome was. I would like to see this issue clarified once and for all.

Please, no flames.

Thanks,

Hugh

This issue can't be "resolved once and for all". As several previous posts
have indicated, the sucess or failure of the mod depends on the CPU version
and E-Prom Bios rev in your particular radio. Since there is no info on
which versions it will work with and which versions it will destroy, the

risk is yours. Take a gamble and try it, or be safe and send it to Yaesu with a copy of your MARS/CAP endorsement and they will do it for you for the cost of shipping.

(Incidentally, I have seen a post or two on the newsgroups from persons who have had damage from trying this mod. You might want to search www.dejanews.com and try to find them for yourself. However, I would suspect that most of the people who may have messed up their rigs with this mod would avoid telling the world about it by posting it here.)

As Mr. Eastwood once said "Do you feel lucky ?"

I guess you have to ask yourself, why do you want to do the mod, and will/can you use it once it's done, and if it works? And remember the old saying... "If it works, don't fix it!" The FT-920 is a super radio... you don't want to screw it up.

Bill Crocker

>mythology) right? And he could destroy him as well right? But he
>chooses not to, right? Therefore, God is EVIL.

No you stupid bastard, I just didn't know there was a reference like that in the Bible. If you would've read the rest of my post, you would have realized that I am perfectly aware that God must've created evil.

I have the following equipment

FT-101B = about 20 hrs = 9++, mic and power cord
FL-2100B = Amp = 9+
FV-101B = VFO = 8.5
YC-601 = Freq. counter = 8.5
YO-100 = Scope = 9
FTV-650B = 6M = 9
FTV-250 = 2M = 9
YP-150Z = Dummy load/Watt meter = 9 (rare)
YD-844A = Desk Mic = 9+

If you are hunting a very nice near complete station here it is and this one won't be here long !

You would only need SP-101 Speaker or SP-101PB Phone patch and QTR-24 World clock to complete station http://www.qsl.net/nw2m/ as seen here.

I would like to sell as a complete set, but "might" consider splitting up

Want to trade my laptop (description below) for a H.F. rig, of equal value and/or + Cash.

Laptop Description

3 Weeks Old
Compaq Presario Model 1625
All-In-One Design
Built-In Modem (56k)
24x Cd-Rom And Disk Drive
12.1" High Performance Addressing Display (HPA)
128-Bit Accelerated Graphics
3.5 Gig Hardrive
AMD-K6 266mhz MMX Enhanced Processor 88.80
42% FASTER than other mobile 266mhz MMX Processor 63.90

Carrying case included

Total Value 3 weeks ago $2400.00 + $180.00 3 year warranty

Will Include 3 year TRANSFERABLE BEST BUYS WARRANTY

What I am looking for - LATE MODEL HF RIG -
IC-756
IC-761
IC-781
IC-970

Other HF rigs will also be considered - Expecially Icom - Kenwood

Email what you have and let's see if we can come to a mutual agreement.

Have specially modified Kenwood TS-742 that works in combination with a CSI Patch IV. This provides autopatch, repeater, remote controllable configuration. Have used this set-up for field day repeater, local repeater with a 150 watt FM UHF amplifier which is also for sale.

This is an excellent combo package for anyone looking for autopatch, economic repeater for private club or individual use.

Asking $1300 for everything and a few extras - customized cabling with N connectors, discriminator output switch, etc.

Will consider any reasonable offer or trade. Available to ship overnight!

I recently purchased a BCT-2, When monitoring a channel it always cuts out
(checking another channel I presume) can I change this??

Also the delete button on the front I assume is to remove unwanted channels!
By deleting these is there a way to restore them at a later date, i.e...
turn off then on??????

I was recently given an ICOM IC-02AT transceiver and it has some problems. The first was easy to fix - a bad battery pack (luckily it came with one that had replaceable AAs). But the second is more baffling. It seems like the volume switch doesn't work - it turns on and I can get low volume but once I turn it more than ~1/6 I lose all volume. Any help ? How can I fix it ? is it worth fixing ?

Also can someone tell me how old this unit is ? and how much it would be worth
 ? IF I were to sell it or trade it in ?

Thanks for any help you can provide,
Mike McLeod

Hello, depending on where the
volume switch is, it may be
overloading a base circuit, in
which case the transitor or
one of its associated
components is not functioning.

I need the Main Board for an Icom 02AT or an Icom H16. (I've been told it's the same board).

Thanks

I don't know about video but I have a intercom system here at my house that plugs into an electrical outlet and uses the home's wiring to transmit audio. I seems to me that home wiring would be too 'noisy' to use for video, but that's just my thought, not the gospel. Good luck!

It's simply a matter of "multiplexing": using high-pass filters to keep
the 60 Hz AC and first few harmonics (noise) out of the higher-frequency
voice circuits.   73s

my first attempt at a VR movie for the web is online at the link below.
it's a view of my hamshack.

just click the nav button marked my shack on the homepage.
it's 350k m/l so let it load before getting bored ;-)
usually takes 2 minutes to load completely

thanks for your time/feedback

The radio is at least 10 years old
We used them for field ex when i was attached to seabees
in 88/89 and the mars station i think had them for a couple years before
that I THINK
if your tecnically inclined open it up an clean the swich/pot with a
electronic cleaning soution and check the wiring of the swx
don

A few years ago, I saw an add in a ham radio magazine about a controller for the Ramsey FT transceiver kits. This controller gave full tuning of the entire band, 20 plus memory channels, encode and decode, etc.. I believe the name of the company that manufactures it is something like MicroTek.

Can anyone confirm the name of the company and supply a phone number or address?

Thanks

Tate, N3BXZ

Control costs about $7 from ICOM.

The 02AT came out around 1982 and ran until around 1990, they made over
200,000 of them if I remember right. It has built in PL, but limited
frequency range, so it's value is only about $100 in good condition with a
manual, less for less.

We do tht here on campus every hour. We have a big motor-generator set where the main power transformer and switchgear is. It revs up a few minutes before the hour, and then injects a high pitched signal into the

AC which propagates all over our campus 4KV system and thru the power transformers. This sets the Simplex time clocks to the correct time. After the injection, it takes more than ten minutes for the M-G to rev down and stop. Whew! That must be real roller bearings!

Many years ago I sent morse code over the 60 Hz power system.
I connected the 8 ohm output of an audio amplifier (3 watts) yhrough
a two micropfarad capacitor to the line. At the amplifier input I had a
keyed audio oscillator.

I knew a radio ham several houses away and was able to hear this
signal there with just 2000 ohm earphones connected to the line
through a very small capacitor.

The latest Radio Shack catalog has something that sends signals
over the power line. It is used to remotely turn on or off a lamp
or appliance. Sender is $19.99. Receiver is $27.99.

Carrier current transmission is what its called. It is fairly commonplace. Modulation can be most anything you can send though the air. Electronics hobby mags have had many a circuit to do this. You could for example "transmit" on the power lines and any radio plugged in (or placed near enough) can recieve it.

sounds like it's checking the priority channel (every 2 seconds or so)
i think you'd have to use "hold" on the channel you want to override
the priority checking (i think)

i think if you hold the "lockout" (delete?) button down for
2 (or is it 5 seconds) you will hear a "beep beep". this is
the procedure to release all locked out channels.

if this don't work - maybe find a operator's manual . . .

Three guesses:

1. A publicity stunt.
2. Isn't he the guy with all of the UFO talk? Hmmm, perhaps he discovered they aren't real?
3. Has he been kidnapped by aliens and replaced by one who scuttled his show to cover up? :-)

A year after the supposed event he now decides to leave ... does the name Ross Perot come to mind?

Someone correct me on any mis-statement of the facts here, please! :-)

Seriously, something just doesn't sound right here ... anyone get the same feeling?

Its checking the "extender" channels for whatever state you selected, when it finds activity on one of them it will sound an alarm and the red "WARNING" lite will flash. To restore deleted frequencies, make sure the BCT-2 is not scanning (open the squelch) then press and hold the (DELETE) key until "CL" appears on the

display.

It appears he'll be back.
He'll make a statement on
the 19th, during the first
hour of the show, hosted
by Hilly Rose:

Lynx Version 2.8rel.2

So was it a Perot-like decision-undecision, or just a cheap publicity stunt?
He had a whole year before he decided to do it, according to his quiting statement,
so there is no reason to believe that he didn't have all of the information
he needed to make that decision. So much for whatever credibility he had
with whoever!

Hmmm ... just when you thought it was safe to listen to the radio ... he's baaack ...

Does anyone have a copy of a .tpl & .rdf file from a radio with the
freebander mod? I have found out that if you use a tpl & rdf file on your
radio without preforming the hardware freebander mod and just use the tpl &
rdf file on your radio you will get the same results. If you have them send
them or email me at Kurgan@mail.datatoe.com

Thanx allot jimmy

P.S. I'm am also looking for the Euro tpl & rdf file

Kinda funny, I think he had just announced that his show had been bought
out by a new broadcast Co. Sounds like he got fired to me. Just a guess
though. Or the three piece suiters irked him for some reason and he
quit. You can be sure the biz end had a great deal to do with it. MK

I listened to him all the time. Pretty entertaining some of it. But I
like the stories about ghosts,ufo's,funky looking gorrila monsters,etc.
that no one else will talk about.
His show didn't get to be as popular as it is for nothing. Also
considering it's on when most normal people are asleep. I listen to him
on a 440 broadcast link to KTRH radio on my HT. Will get kinda boring at
night without all his weird types to listen to. MK

On 11 Oct 1998 22:20:06 GMT, an orbiting mind control laser caused
ddgsk@tic.net to write:

>As the resident NY'er here, (at least who posts--there are probably
>thousands lurking) my story should get interesting.

>
>In any case, we should probably set aside some common place to meet,
>perhaps a physical location, perhaps a ham radio frequency, who knows. We
>can't just let csy-2k die.

Been done already, check DejaNews.

In any event, I'll repeat it:

The Y2K Rollover Net will commence on 31 Dec 1999 at 2000Z. Primary Net Frequency is 28.350MHz USB +/- QRM. Primary NCS is N4ZHG, alternate NCS is AH6GI/4. Secondary nets will be established as needed, and may turn into a full blown ARES/RACES operation.

One hopes not.

If it weren't for the fact that such is not legal, I'd suggest calling the net by playing a certain track by R.E.M. (wonder if I can apply for a one-time variance from the FCC? It'd probably go over like a fart in church...)

For those who aren't ham radio aware, the frequency is in the middle of the Novice 10 meter allocation. By the time rollover hits, we should be getting some good skip on that band.

>
> P.S. I'm am also looking for the Euro tpl & rdf file

An interesting note is that I explain how to do the complete freeband mod without even having to use someone else's rdf and tpl files. I concider it much cleaner cause lord knows what settings others set their radios to and you'll have /their/ defaults.

You can find the faq at http://www.blarg.net/~tdragon/faqs/ If anyone has any questions or problems, feel free to ask me for help.

BTW, this /will not/ work on the newest ft-50s. They've had the freeband mode completely removed and if you try to set the radio to freeband mode, it'll act strangely and erratically til you restore it to a valid country code.

```

Answer: None of the above. Art Bell was forced off his radio show by PMS. The full story is at http://thevinegar.webjump.com/home.htm.

Also at that site are results of an experiment which shows that being educated in Morse Code can kill you.

73, de Hans, K0HB

Pete,

I have the voyager DX. I find it to be mechanically well built, and very effecient.

Well,

Congratulations. You've just insured that I'll never do any business
with you. As for the products you sell, well - I've done very well with
out them so far and you can be assured you've given me even more
insentive to avoid them in the future.

Take it to the papers fools

CHANNELS, PLUS CALL CHANNEL AND VFO. EXTENDED TX/RX ENABLED. MEMORY AND

VFO SCAN WITH PRIORITY AND TIMED SCAN. BACKLIT LCD DISPLAY AND DTMF KEYPAD. PHONE DIALER MEMORY AND PAGING. MANY OTHER FEATURES. TRICKLE BATT CHARGER. JACKS FOR SPEAKER MIKE AND EXTERNAL 12V POWER SOURCE. FEW SCRATCHES BUT TROUBLE FREE OPERATION (WELL USED BECAUSE IT "USES" WELL). GREAT RADIO. MY BROTHER ALSO HAS ONE AND LOVES HIS. GREAT SENSITIVITY AND I ALWAYS GOT GOOD SINGNAL/AUDIO REPORTS. I UPGRADED TO A NEW HT AND NOW AM NOT USING THE ALINCO ANYMORE.

IN ORIGINAL BOX WITH MANUAL AND SCHEMATIC: $125.00

(I will ship US mail or buyer can arrange other shipping if they wish)

Chris Chamberlain, N3PVZ

[repost -- my original post seems to have disappeared into the proverbial bit-bucket]

After an hiatus while I enhanced the technical details of my web site, I am back to reviewing a backlog of books :-)

Please check out my latest review, and if you know of any good similar or related books, please drop me a note on while you are on my web site :-)

My new review:

URL: http://www.weyrich.com/book_reviews/managing_12.html

TITLE: Managing 12 Volts: How to Upgrade, Operate and Troubleshoot 12 Volt Systems

ABSTRACT: A handy little book which covers all aspects of the use of 12 volt lead-acid batteries in emergency and recreational settings. Of particular interest is the advice on the use of solar cells to charge lead-acid batteries.

INDEX: electronics, survival

KEYWORDS: emergency power, lead-acid, 12 volt, solar cells, camping, battery backup, recreational vehicles, RV, boats, marine, charging, care, use, using batteries, power inverters, capacity, voltage, current, storage, deep-cycle, gel-cell, alternators, generators, regulators, wind power, wiring, troubleshooting

Regards,

orville.

I live in an apartment building with TV sets using switch-mode power supplies. The result is horrendous cariers at about 6 Khz spacing all along the HF bands.

Can the MFJ1026 and MFJ1025 help with this problem ? Can they really eliminate the carriers which make QSO'ing impossible ? We are talking about carriers of S8-9 and I expect to hear stations of S2-5 on the same frequency.

If you have used these products then please tell me about your experiences with them. Like I don't want to shelve out 170 US$ if it ain't gonna help !!!

I can reduce an S7 noise from a computer sitting less than 3 feet away from my HF rig with an MFJ-1026. It took some experimenting with the noise pickup antenna, but it is the only thing that did work for me. Hope you have as good a result as I did.

The 1026 works quite well. I use it to null out noise from a farmer next door that has a screwed up electric fence. The noise is very severe, but I can null it out 100% below 20 Mhz. Above that I need to get a better noise pick-up antenna. Currently I use the built in whip only for the noise antenna. The main antenna is an inverted vee up 15 meters.

You need to input a good sample of the noise alone, without the signals you want to listen to. This is the bottom line. The noise antenna phase is adjusted by the front panel controls so it is out of phase with the main antenna. The noise is cancelled, leaving the desired signals. If your noise sample also contains the desired signal it will also be cancelled. If you are using indoor antenna's for both the main and noise sample with noise sources in other parts of the building it may not work well, since you may have trouble getting a good noise only sample.

The workmanship is good, and the phase shift circuit is clever.

If you can get a amplified directional loop for one of the antenna's, it might
work using only indoor antenna's.

Good luck;

Steve

Yes, I had the opportunity to evaluate an MFJ-1026 recently.

Having owned a JPS ANC-4 for a few years I was quite keen
to do an A/B comparison in a controlled environment.

Boy, was I dissapointed in the MFJ unit.

It was more fiddely to adjust and the depth of the null was
considerable less than that of the ANC-4.

Another minus in my situation is that the MFJ is not speced
up to 60MHz like the ANC-4, and after trying it it simply didn't
work at 6MX.

On a positive, I must say I was suprised at how good the build
quality was, and the use of SMT componentry.
Maybe MFJ care oming into the 90's?

How odd, side by side comparisons by others who have posted to this group for the most part seem to be getting just the opposite of the results you get. The difference in design between the MFJ and JPS units would most likely mean a redesign of the noise antenna. Is it possible that some minor changes in the noise antenna could have resulted in much better performance for you?

Admittedly it takes some time to optimize the performance, and reduce the fiddle factor, of the MFJ-1026. However, the results obtained for a given noise with a given noise antenna seem to be repeatable. In other words you could develop a chart allowing you to set the filter before returning to a band thus reducing the amount of tuning required.

I believe both units to be good investments, and obviously some have had better results with one unit over another. Bottom line, I hope the discussion has shown the originator of the question that these type of units work well!

> Hello Robin, Dan here. I have the MFJ 1025 and I say it is fantastic. My noise is mainly a high intesity powerline noise. The MFJ totally wipes it out. My level of crap is, at times, s9 (on a FT1000MP meter). That is rather stout. I have not tried it with the noise you describe, however I would say it will likely work, since all the MFJ needs is a steady noise source to elliminate it.

In your apartment, I would recomend you get one with the built in pre-amp and try it with a small indoor antenna. The MFJ must be able to hear both the desired and un-desired signal.

Good Luck

Hi!

SO when I get thsi straight, there is NO SENSE in using 2 equivalent antennas side-by-side as MFJ suggest would be the most ideal solution to use the MFJ???

It sound logic to me that, if you put the disired signal as well into the 'noise antenna', that this would be eliminatied as well.

But what does MFJ mean then with this 'ideal' situation??? And do i have to connect an antenna to 'every source of noise', let's say an antenna for my neigbours TV, one for the powerlines 2 blocks away... If you get my drift.

What's the truth here. Do they REALLY work, or must I take so much effort to solve several problems.. Or??? IS it ment to be for one very aggresive noise only, as these stories suggest?? SO that it cannot be used as an 'universal QRM killer' but one to kill a specific annoying QRM?

Any suggestion is very welcomed

```
Thanks!

Kees van Engelen (The Netherlands)

That is true. Your signal receiving antenna is picking up signals and
some local noise. Your noise antenna is picking up a lot more local noise
than signals. When the noise is equal in magnitude and opposite in sign,
thus cancelling the noise, there will be some signal left over to be
received.

> What's the truth here. Do they REALLY work, or must I take so much effort to

It works on LOCAL noise only. It cannot separate far-field noise from signals. However, if one's signal antenna is horizontal and one's noise antenna is vertical, it can work well on vertically polarized noise, the most common local QRM.

USED RADIO FOR SALE

Motorola Radius 8 Channel VHF Mobile Radio. Perfect condition, no operating problems. Used for Fire/Rescue Service in my personal vehicle. 136-172 MHz frequency range. Dealer programable. With Radius microphone and power cable. GREAT DEAL!!!

$300.00

(I can arrange for pre-shipping programming for small additional fee)

EXTRA!!! Glass mount VHF-HI antenna (used) for above radio. Flat black, cellular "look-a-like" style. Only needs antenna remount kit (or double sided tape!!) Great reception and low profile!! Perfect condition. Paid $40.00 new. Will toss in for $15.00.

mailto:ccrc@epix.net for more information

I agree Icom IMHO PCR-1000 external PC radio makes a better radio then low end inernal WinRadio when comparing them dollar for dollar, USA support for USA support, and quality for quality. The truly expensive WinRadio WR-3100e sounds like a good deal if you can afford it. This is a good external version. It had better be for that price!

Putting the radio card inside a computer is in the long run a bad idea for a variety of reasons. Noise being a big one. Isa bus is another. All the key technologies going into the computer will be on the PCI bus or newer buses at this time as the computer makers phase out ISA. WinRadio internal is still on the obsolete ISA bus. Buying a WinRadio internal makes as much sense as a person buying an expensive ISA sound card at this time. Even the recent high end and expensive ISA based SB AWE64 Gold can not compare to the quality of the new PCI sound cards.

FYI there has been a major advancement in PC sound which has moved to the PCI bus as predicted. Check out the specs on Creative Labs newest family of sound blaster cards which are now all PCI. The SBLive family of cards $100 to $200 are the ones to look at. The SBLive is a real sleeper at this time but has the potential to become one of this years hottest hardware items for the PC with the introduction of a $100 version. You have got to hear one in action, it is like was when we went from old CGA video to SVGA video! Only a fool would buy the similarly priced Sound Blaster PCI 128 or PCI 64 at this time. BTW I have two -� three month old PCI 64's for sale ($50 ea. mailto:fourphun@bellsouth.net) if any fools who are short on cash are reading this. The SB 64 will do some true 3-D audio in four speakers and may have some support for EAX in the near future as a software download from creative. I am switching to SBLive in both PCs.

The DSP chip on the SBLive is equivalent to a P-90 coprocessor just for sound. This card can output audio for up to eight different speakers. It can give you full control over multiple audio streams simultaneously (32 3-D audio streams in hardware alone -up to 512 midi instrument voices if devoted to music or any combination of these!). Anyway the potential of this card added to the audio output of radio signals is significant for shaping the signal and extracting information. Electrically this is a very clean low noise card that can supply noise free digital audio out if you need it. In the hands of hobbyists this card has tremendous untapped potential. More on SBLive can be found at http://www.sblive.com/product/benefits.html and http://www.sblive.com/product/faq.html . There is also a new private news server that you can log into now at -� news.creativelabs.com �- that discusses speakers, sound and the various generations of sound cards.

I have a NEW (three weeks old) Compaq Presario 1625 Laptop - Includes the following -

AMD-K6 266 MHZ MMX Enhanced Processor
Built in Modem - 56k
CD-Rom 24x
12.1" High Performance Addressing Display HPA
128-Bit Accelerated Graphics
3.5 Gig hardrive
JBL Internal Speakers
PLUS MORE!!!!!
3 YEAR TRANSFERABLE WARRANTY
Carrying case also Included.

Looking to trade for YAESU FT1000 MP also in excellent condition with accessories, i.e. Matching speaker, etc.. Other like HF's also will be considered!

Email with what you have, will consider all trades.

If God can prevent evil, but doesn't, then He isn't all-loving.
If God intends to prevent evil, but cannot, then He isn't omnipotent.
If God both intends to prevent evil and is capable of doing so, then
how can evil exist?

You cannot believe in God and also believe that he is not responsible
for all the churches he destroys with tornados, hurricanes, etc.

Heck, in the Wholly Babble, god(tm) admits that he(tm) CREATES evil!
Somewhere in Isaiah (45:7, if memory serves).

>Somewhere in Isaiah (45:7, if memory serves).

Hey, thanks for the tidbit, I'm arguing with a fundy who claimed God cannot coexist with evil, but thanks to your reference I can now tell him that, according to the "Wholly Babble," God created it!!! Of course, some simple logic would tell you that if God is the creator of all things then he must've created evil, but fundies cannot avoid it when the Bible tells 'em so.

Oh yeah, in my copy of the "Wholly Babble," the fundies have an annotation which supposedly resolves the contradiction. It is as follows: Heb. 'ra,' meaning "sorrow," "wretchedness," "adversity," "afflictions," "calamities," but never translated sin. God created evil only in the sense that He made sorrow, wretchedness, etc., to be the sure fruits of sin.

The fundy will then argue that man brought sin into the world with 'the fall,' which leads us all back to the problem of evil. God could've just as easily created a world in which man freely chose to do good as one in which man freely chose evil, so God is ultimately accountable for everything.

The fundy will then crawl behind faith, and die. Good riddance... .

Hi Kent,

I had a lot of fun reading your first post.
I was about to write the same thing.

God has a sense of humour. I hope Hantson will get God's help
for his state of mind, which is in a worse state than the transmitter
itself :-)

Putting ANY microprocessor that runs on harmonically rich square waves near ANY receiver isn't a 'good thing'. Ultimately, for absolute lowest noise floor, we wouldn't have any of these processors near the vicinity of a receiver at all. Since the introduction of the processor into the receiver its been an ongoing battle against phase noise in relation to the receiver. Especially in concert with very weak signals.

Cheers,
Gary

> him that, according to the "Wholly Babble," God created it!!!

You needed someone to tell you this? God created Satan (in christian mythology) right? And he could destroy him as well right? But he chooses not to, right? Therefore, God is EVIL.

If you can only do 5 wpm that is about all you will be able to do within
a normal time span. Most people that REALLY run cw go fast enough to
have a fairly normal conversation. Besides not much different on fone.
Yer loud here, yep, here too, boy it sure is hot, yep, here too, hey you
still on yer old rice box? yep, how bout you?, yep, same here, etc,ad
nausium...MK

I failed the General test because of CW twice. I finally got it. That
was back in 1959. I still enjoy CW and use it. If I can learn it,
anyone can.

Alan

I must admit that there is much redundancey on CW, but if you look around, especially on the lower freqs., you can find some OT's, and me for that matter, having some good conversation.

I like to tell the story about when I took the General test a couple of months ago. This old fart (I use the term with affection...he's a friend) about 85 years old came in to sit through the 20 wpm and 13 wpm while waiting for his 5 wpm test. While I stuggled through the 13 wpm he copied 100% perfect copy. He was pissed because now he has to study for the general written...

Well here my $ 0.02 worth, It took me 2 years to pass the 20 wpm for extra class. The only reasoned I stuck with it is because I have a $ 1500.00 radio setting on my desk and I wonted to be able to use all of the band and not just a little proton. I think if we don't do something to bring more interest to our hobby we are going to lose more bands. Look at the internet, You can communicate with any one in the world and don't have to take any
test

ok, this one got me... cat 1000 comes in the mail. cost mega bucks, BIG
dollars. but no software!!! it's extra! what a surprise, indeed. for that
money you would think they'd offer up software with it. disappointing.
anyone have a copy to save me a few hours? would appreciate it and could
offer trades for your trouble.
thanks in advance!

Well, that last statement is a bit of an exaggeration OM, but it may one day get to that point. On the other hand, what is the challenge in that? I thought part of the hobby was the way it challenges you to learn new things and push yourself (I guess you didn't enjoy getting up to 20 wpm at all and feel no pride in having accomplished it) both in terms of technical ability and operating skill. When you can get a ham license for just sending in a few boxtops from the cereal box, that's when ham radio will be really dead.

>There is a vast difference between amateur and commercial radio.The
commercial has to keep the budget down,and this they can do by doing
away with radio operators and replacing them with a bridge/hand held
phone through satellites.The 'self training'aspect does not come in to
it with them,we do not have ready access to satellites,and if we did,it
would be the same as having a telephone in our shacks.I fail to see how
any one can try making comparisons between amateur and commercial
radio.They are worlds apart.Also,if a satellite goes down,then that is
that,there is no way you can do a 'make and mend' repair.Anyone saying
that morse does not have any use in this world of ours does not have the
first understanding of morse/cw.Please do not make senseless remarks to
justify the fact that those who cannot make the necessary standard will
not try harder,but will try all means to drag the standard down to their
own level.Morse does get through when other 'easy methods'will not..

When I first got my ticket - I thought there was no use for CW either. Then 10mtrs closed and it was all that was left. I sat and listened to 40mtrs - learned cw and started to enjoy it. Now can send and recieve over 30wpm by hand.   Once you learn it you will enjoy it. Or at least that's the way it worked here.

That's how it happened to me. Once I took the 15-20 min a day to really learn it, I really enjoyed it. My radio doesn't even have a voice mode.

I'm not sure what software you should have received, since we are using the CAT 300 DX which had none and needed none. Perhaps you're referring to the "Programming under Windows" software, which we don't use. All our programming was done with TT phones, one button at a time!

On the other hand I did try an approach they sort of mentioned, but not really with enthusiasm. (Good reason too, they didn't know enough about it to push it.) They sold me an RS 232 interface, and I provided the modem at the repeater site. The idea being to program the controller remotely from a computer, and of course then you do need their software. I bought the software for the CAT 300 DX, and have it now. But after going thru all this, I found their real intent was to have me take a laptop computer to the repeater site, and download directly thru the RS 232 interface. The idea of using a modem and doing it remotely was sort of an off the wall suggestion they made. It took me hours and hours to finally get it to work, which I did. They really had no interest in helping me either, were so disinterested they offered to give me the money back on the interface and quietly go away. Not a happy parting.

Good luck,

Olin McDaniel, W4PFZ

Gotta tell you Dads' out there, the Novice Ticket makes a wonderfull father and son/daughter project. Try it. Don't get discouraged because the kids just "soak up" the code like a spong and you have to work at it. Thats just the way it is. Kids have NO problem kicking your behind on code. The theory portion will put you back on equal ground for a while. :o) A short while only though!

I agree and I remember that the late senator goldwater had two fantastic
base set-ups and pushed for code to remain but when he sat at his radios
he would use modems and computer 90% of the time.
All the code/cw amateurs that want code/cw to be part of testing and
operation need to wake up as do the no code/cw amateurs code needs to go
and proper manners need to be improved, We all need to help the
manufactures to promote amateur radio and get more of the public
interested and involved in amateur radio not to increase sales but to
keep the frequencies we have and to keep amateur radio ALIVE.
Come on now people amateurs/ham's men and women and teens lets get the
band wagon going and keep our hobby/passion alive and well and we need
to police our air-ways and help the fcc to get rid of the abusers the
foul language and dead carriers the trouble makers the one's that give
amateur radio a bad name off the air.
SAVE Amateur Radio promote it work to make it grow, work to make it Live

for another hundred years or longer and as for me I have been getting my children hooked on amateur radio and hope the carry it on after Im gone.
